# FCC RADIO TEST REPORT

| Applicant's company | Belkin International, Inc.                         |
|---------------------|--|
| Applicant Address   | 12045 East Waterfront Drive, Playa Vista, CA 90094 |
| FCC ID              | K7SF9K1118V1                                       |

| Product Name      | AC1800 DB Wi-Fi Dual-Band AC+ Gigabit |
|-------------------|---------------------------------------|
|                   | Router                                |
| Brand Name        | Belkin                                |
| Model Name        | F9K1118v1                             |
| Test Rule Part(s) | 47 CFR FCC Part 15 Subpart E § 15.407 |
| Test Freq. Range  | 5150 ~ 5250MHz                        |
| Received Date     | Aug. 22, 2012                         |
| Final Test Date   | Sept. 07, 2012                        |
| Submission Type   | Original Equipment                    |
| Operating Mode    | Master                                |

## Statement

Test result included is for the IEEE 802.11n, IEEE 802.11a and IEEE 802.11ac (5150 ~ 5250MHz) of the product.

The test result in this report refers exclusively to the presented test model / sample.

Without written approval of SPORTON International Inc., the test report shall not be reproduced except in full.

The measurements and test results shown in this test report were made in accordance with the procedures and found in compliance with the limit given in **ANSI C63.10-2009** and

47 CFR FCC Part 15 Subpart E and KDB 558074 – 20120118 & KDB662911 D01-20110404.

The test equipment used to perform the test is calibrated and traceable to NML/ROC.

## 1. CERTIFICATE OF COMPLIANCE

| Product Name      | : | AC1800 DB Wi-Fi Dual-Band AC+ Gigabit Router |
|-------------------|---|--|
| Brand Name        | : | Belkin                                       |
| Model Name        | : | F9K1118v1                                    |
| Applicant         | : | Belkin International, Inc.                   |
| Test Rule Part(s) | : | 47 CFR FCC Part 15 Subpart E § 15.407        |
|                   |   |  |

Sporton International as requested by the applicant to evaluate the EMC performance of the product sample received on Aug. 22, 2012 would like to declare that the tested sample has been evaluated and found to be in compliance with the tested rule parts. The data recorded as well as the test configuration specified is true and accurate for showing the sample's EMC nature.

Jordan Hsiao SPORTON INTERNATIONAL INC.

## 2. SUMMARY OF THE TEST RESULT

| Applied Standard: 47 CFR FCC Part 15 Subpart E |                     |                                   |             |         |  |  |
|--|---------------------|-----------------------------------|-------------|---------|--|--|
| Part   | <b>Rule Section</b> | Result                            | Under Limit |         |  |  |
| 4.1  | 15.207              | AC Power Line Conducted Emissions | Complies    | 6.33 dB |  |  |

## 3. GENERAL INFORMATION

## 3.1. Product Details

#### IEEE 802.11n/ac

| Items                    | Description   |  |  |  |
|--------------------------|---|--|--|--|
| Product Type             | WLAN (3TX, 3RX)   |  |  |  |
| Radio Type               | Intentional Transceiver                                 |  |  |  |
| Power Type               | From Power Adapter                                      |  |  |  |
| Modulation               | see the below table for IEEE 802.11n                    |  |  |  |
|                          | see the below table for IEEE 802.11ac                   |  |  |  |
| Data Modulation          | For 802.11n: OFDM (BPSK / QPSK / 16QAM / 64QAM)         |  |  |  |
|                          | For 802.11ac: OFDM (BPSK/QPSK / 16QAM / 64QAM / 256QAM) |  |  |  |
| Data Rate (Mbps)         | see the below table for IEEE 802.11n                    |  |  |  |
|                          | see the below table for IEEE 802.11ac                   |  |  |  |
| Frequency Range          | 5150 ~ 5250MHz  |  |  |  |
| Channel Number           | 8 for 20MHz bandwidth ; 4 for 40MHz bandwidth           |  |  |  |
| Channel Band Width (99%) | 11n:  |  |  |  |
|                          | MCS0 (20MHz): 17.52 MHz ; MCS0 (40MHz): 36.96 MHz       |  |  |  |
|                          | 11ac :  |  |  |  |
|                          | MCS0 (20MHz): 17.60 MHz ; MCS0 (40MHz): 36.96 MHz       |  |  |  |
|                          | MCS0 (80MHz): 75.80 MHz                                 |  |  |  |
| Conducted Output Power   | 11n:  |  |  |  |
|                          | MCS0 (20MHz): 15.73 MHz ; MCS0 (40MHz): 15.69 MHz       |  |  |  |
|                          | 11ac :  |  |  |  |
|                          | MCS0 (20MHz): 15.66 dBm ; MCS0 (40MHz): 15.48 dBm       |  |  |  |
|                          | MCS0 (80MHz): 15.64 dBm                                 |  |  |  |
| Carrier Frequencies      | Please refer to section 3.4                             |  |  |  |
| Antenna                  | Please refer to section 3.3                             |  |  |  |

#### IEEE 802.11a

| Items                    | Description                        |
|--------------------------|------------------------------------|
| Product Type             | WLAN (3TX, 3RX)                    |
| Radio Type               | Intentional Transceiver            |
| Power Type               | From Power Adapter                 |
| Modulation               | OFDM for IEEE 802.11a              |
| Data Modulation          | ofdm (Bpsk / Qpsk / 16QAM / 64QAM) |
| Data Rate (Mbps)         | OFDM (6/9/12/18/24/36/48/54)       |
| Frequency Range          | 5150 ~ 5250MHz                     |
| Channel Number           | 4                                  |
| Channel Band Width (99%) | 16.80 MHz                          |
| Conducted Output Power   | 11.08 dBm                          |
| Carrier Frequencies      | Please refer to section 3.4        |
| Antenna                  | Please refer to section 3.3        |

#### Antenna & Band width

| Antenna         | Single (TX) |        | Two (TX) |        | Three (TX) |        |        |        |        |

### 3.2. Accessories

| Power     | Brand  | Model                   | Rating                        |
|-----------|--------|-------------------------|-------------------------------|
| Adoptor 1 | Dellin |                         | INPUT: 120V~60Hz, 0.8A        |
| Adapter 1 | Belkin | ML30-V120250-A1         | OUTPUT: 12V, 2.5A             |
| Adaptor 2 | Belkin | DSA-30PFB-12 FUS 120250 | INPUT: 100-240V~50/60Hz, 0.8A |
| Adapter 2 |        | DSA-30PFB-12 FUS 120250 | OUTPUT: +12V, 2.5A            |

## 3.3. Table for Filed Antenna

| Ant  | Drond   | Model Name       | Antonno Tuno           |    |        | (dBi) | Remark |
|------|---------|------------------|------------------------|----|--------|-------|--------|
| Ant. | Brand   |                  | Antenna Type Connector |    | 2.4GHz | 5GHz  |        |
| 1    | Airgain | M2445J-T2-G230S  | PCB Antenna            | NA | 1.87   | -     | TX/RX  |
| 2    | Airgain | M2445J-T0-G190S1 | PCB Antenna            | NA | 2.80   | -     | TX/RX  |
| 3    | Airgain | N5X20SC-T1-G190U | PCB Antenna            | NA | -      | 5.49  | TX/RX  |
| 4    | Airgain | N5X20SC-T-B100U  | PCB Antenna            | NA | -      | 6.25  | TX/RX  |
| 5    | Airgain | N5X20SC-T-W250U  | PCB Antenna            | NA | -      | 6.25  | TX/RX  |

Note: The EUT has five antennas, two for 2.4GHz and the others for 5GHz.

#### For IEEE 802.11n mode (3TX/3RX):

Ant. 3, Ant.4 and Ant.5 could transmit/receive simultaneously.

#### For IEEE 802.11a mode (3TX/3RX):

Ant. 3, Ant.4 and Ant.5 could transmit/receive simultaneously.

### For IEEE 802.11ac mode (3TX/3RX):

Ant. 3, Ant.4 and Ant.5 could transmit/receive simultaneously.

## 3.4. Table for Carrier Frequencies

There are three bandwidth systems for the device. For 20MHz bandwidth systems, use Channel 36, 40, 44, 48. For 40MHz bandwidth systems, use Channel 38, 46. For 80MHz bandwidth systems, use Channel 42.

| Frequency Band | Channel No. | Frequency | Channel No. | Frequency |
|----------------|-------------|-----------|-------------|-----------|
|                | 36          | 5180 MHz  | 44          | 5220 MHz  |
| 5150~5250 MHz  | 38          | 5190 MHz  | 46          | 5230 MHz  |
| Band 1         | 40          | 5200 MHz  | 48          | 5240 MHz  |
|                | 42          | 5210 MHz  | -           | -         |

## 3.5. Table for Test Modes

Preliminary tests were performed in different data rate to find the worst radiated emission. The data rate shown in the table below is the worst-case rate with respect to the specific test item. Investigation has been done on all the possible configurations for searching the worst cases. The following table is a list of the test modes shown in this test report.

| Test Items                   | Mode           | 9      | Data Rate | Channel  | Antenna     |
|------------------------------|----------------|--------|-----------|----------|-------------|
| AC Power Conducted Emission  | Normal link    |        | Auto      | -        | -           |
| Max. Conducted Output Power  | 11n 20MHz      | Band 1 | 7.2Mbps   | 36/40/48 | 3/4/5/3+4+5 |
|                              | 11n 40MHz      | Band 1 | 15Mbps    | 38/46    | 3/4/5/3+4+5 |
|                              | 11ac 20MHz     | Band 1 | MCS0      | 36/40/48 | 3/4/5/3+4+5 |
|                              | 11ac 40MHz     | Band 1 | MCS0      | 38/46    | 3/4/5/3+4+5 |
|                              | 11ac 80MHz     | Band 1 | MCS0      | 42       | 3/4/5/3+4+5 |
|                              | 11a            | Band 1 | 6Mbps     | 36/40/48 | 3/4/5/3+4+5 |
| Power Spectral Density       | 11n 20MHz      | Band 1 | 7.2Mbps   | 36/40/48 | 3+4+5       |
|                              | 11n 40MHz      | Band 1 | 15Mbps    | 38/46    | 3+4+5       |
|                              | 11ac 20MHz     | Band 1 | MCS0      | 36/40/48 | 3+4+5       |
|                              | 11ac 40MHz     | Band 1 | MCS0      | 38/46    | 3+4+5       |
|                              | 11ac 80MHz     | Band 1 | MCS0      | 42       | 3+4+5       |
|                              | 11a            | Band 1 | 6Mbps     | 36/40/48 | 3+4+5       |
| 26dB Spectrum Bandwidth      | 11n 20MHz      | Band 1 | 7.2Mbps   | 36/40/48 | 3+4+5       |
| 99% Occupied Bandwidth       | 11n 40MHz      | Band 1 | 15Mbps    | 38/46    | 3+4+5       |
| Measurement                  | 11ac 80MHz     | Band 1 | MCS0      | 42       | 3+4+5       |
| Peak Excursion               | 11a            | Band 1 | 6Mbps     | 36/40/48 | 3+4+5       |
| Radiated Emission Below 1GHz | Normal link or | CTX    | Auto      | -        | -           |
| Radiated Emission Above 1GHz | 11n 20MHz      | Band 1 | 7.2Mbps   | 36/40/48 | 3+4+5       |
|                              | 11n 40MHz      | Band 1 | 15Mbps    | 38/46    | 3+4+5       |
|                              | 11ac 20MHz     | Band 1 | MCS0      | 36/40/48 | 3+4+5       |
|                              | 11ac 40MHz     | Band 1 | MCS0      | 38/46    | 3+4+5       |
|                              | 11ac 80MHz     | Band 1 | MCS0      | 42       | 3+4+5       |
|                              | 11a            | Band 1 | 6Mbps     | 36/40/48 | 3+4+5       |
| Band Edge Emission           | 11n 20MHz      | Band 1 | 7.2Mbps   | 36/40/48 | 3+4+5       |
|                              | 11n 40MHz      | Band 1 | 15Mbps    | 38/46    | 3+4+5       |
|                              | 11ac 20MHz     | Band 1 | MCS0      | 36/40/48 | 3+4+5       |
|                              | 11ac 40MHz     | Band 1 | MCS0      | 38/46    | 3+4+5       |
|                              | 11ac 80MHz     | Band 1 | MCS0      | 42       | 3+4+5       |
|                              | 11a            | Band 1 | 6Mbps     | 36/40/48 | 3+4+5       |
| Frequency Stability          | Un-modulatio   | n      | -         | 40       | N/A         |

The following test modes were performed for all tests:

#### For Conducted Emission test:

Mode 1. Put EUT upright with Adapter 1.

Mode 2. Put EUT upright with Adapter 2.

For Radiated Emission below 1GHz test:

Mode 1. Put EUT upright with Adapter 1.

Mode 2. Put EUT upright with Adapter 2.

#### For Radiated Emission above 1GHz test

Mode 1. Put EUT upright with Adapter 1 as representative.

#### 3.6. Table for Testing Locations

| Test Site No. | Site Category | Location | FCC Reg. No. | IC File No. | VCCI Reg. No |
|---------------|---------------|----------|--------------|-------------|--------------|
| 03CH01-CB     | SAC           | Hsin Chu | 262045       | IC 4086D    | -            |
| CO01-CB       | Conduction    | Hsin Chu | 262045       | IC 4086D    | -            |
| TH01-CB       | OVEN Room     | Hsin Chu | -            | -           | -            |

Open Area Test Site (OATS); Semi Anechoic Chamber (SAC); Fully Anechoic Chamber (FAC). Please refer section 6 for Test Site Address.

### 3.7. Table for Supporting Units

| Support Unit | Brand   | Model  | FCC ID         |
|--------------|---------|--------|----------------|
| Flash Disk   | Silicon | D33B01 | DoC            |
| Flash Disk   | Silicon | D33B02 | DoC            |
| Notebook     | DELL    | M1330  | E2K4965AGNM    |
| Notebook     | DELL    | D400   | QDS-BRCM1005-D |
| Notebook     | DELL    | E6220  | N/A            |
| Notebook     | DELL    | M1330  | E2K4965AGNM    |

## 3.8. Table for Parameters of Test Software Setting

During testing, Channel & Power Controlling Software provided by the customer was used to control the operating channel as well as the output power level. The RF output power selection is for the setting of RF output power expected by the customer and is going to be fixed on the firmware of the final end product.

#### Power Parameters of IEEE 802.11n MCS0 20MHz

| Test Software Version | n Manual tool 1.0.0.10 |          |          |
|-----------------------|------------------------|----------|----------|
| Frequency             | 5180 MHz               | 5200 MHz | 5240 MHz |
| MCS0 20MHz            | 40.00                  | 40.00    | 40.00    |

#### Power Parameters of IEEE 802.11n MCS0 40MHz

| Test Software Version | Manual to | ol 1.0.0.10 |
|-----------------------|-----------|-------------|
| Frequency             | 5190 MHz  | 5230 MHz    |
| MCS0 40MHz            | 39.00     | 39.00       |

#### Power Parameters of IEEE 802.11a

| Test Software Version | Version Manual tool 1.0.0.10 |          |          |
|-----------------------|------------------------------|----------|----------|
| Frequency             | 5180 MHz                     | 5200 MHz | 5240 MHz |
| 11a                   | 26.00                        | 25.00    | 25.00    |

#### Power Parameters of IEEE 802.11ac MCS0 20MHz

| Test Software Version |          | Manual tool 0.0.0.9 |          |
|-----------------------|----------|---------------------|----------|
| Frequency             | 5180 MHz | 5200 MHz            | 5240 MHz |
| MCS0 20MHz            | 40.00    | 39.00               | 40.00    |

#### Power Parameters of IEEE 802.11ac MCS0 40MHz

| Test Software Version | Manual to | ool 0.0.0.9 |
|-----------------------|-----------|-------------|
| Frequency             | 5190 MHz  | 5230 MHz    |
| MCS0 40MHz            | 38.00     | 39.00       |

#### Power Parameters of IEEE 802.11ac MCS0NSS1 80MHz

| Test Software Version | Manual tool 0.0.0.9 |
|-----------------------|---------------------|
| Frequency             | 5210 MHz            |
| MCS0 80MHz            | 40.00               |

During the test, "Manual tool 1.0.0.10 and Manual Tool Version 0.0.0.9 " under WIN XP was executed the test program to control the EUT continuously transmit RF signal.

## 3.9. Test Configurations

## 3.9.1. Radiation Emissions Test Configuration

Test Configuration: 30MHz ~1GHz

| Item | Connection    | Shield | Length |
|------|---------------|--------|--------|
| 1    | Power cable   | No     | 1.8M   |
| 2    | RJ-45 cable   | No     | 10M    |
| 3    | RJ-45 cable*3 | No     | 1.5M   |

#### Test Configuration: above 1GHz

| Item | Connection  | Shield | Length |
|------|-------------|--------|--------|
| 1    | Power cable | No     | 1.8M   |
| 2    | RJ-45 cable | No     | 10M    |

## 3.9.2. AC Power Line Conduction Emissions Test Configuration

| ltem | Connection    | Shield | Length |
|------|---------------|--------|--------|
| 1    | Power cable   | No     | 1.5M   |
| 2    | RJ-45 cable   | No     | 1.5M   |
| 3    | RJ-45 cable   | No     | 10M    |
| 4    | RJ-45 cable*3 | No     | 10M    |

## 4. TEST RESULT

## 4.1. AC Power Line Conducted Emissions Measurement

#### 4.1.1. Limit

For this product which is designed to be connected to the AC power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the band 150 kHz to 30 MHz shall not exceed below limits table.

| Frequency (MHz) | QP Limit (dBuV) | AV Limit (dBuV) |
|-----------------|-----------------|-----------------|
| 0.15~0.5        | 66~56           | 56~46           |
| 0.5~5           | 56              | 46              |
| 5~30            | 60              | 50              |

#### 4.1.2. Measuring Instruments and Setting

Please refer to section 5 of equipments list in this report. The following table is the setting of the receiver.

| Receiver Parameters | Setting  |
|---------------------|----------|
| Attenuation         | 10 dB    |
| Start Frequency     | 0.15 MHz |
| Stop Frequency      | 30 MHz   |
| IF Bandwidth        | 9 KHz    |

#### 4.1.3. Test Procedures

- 1. Configure the EUT according to ANSI C63.10. The EUT or host of EUT has to be placed 0.4 meter far from the conducting wall of the shielding room and at least 80 centimeters from any other grounded conducting surface.
- 2. Connect EUT or host of EUT to the power mains through a line impedance stabilization network (LISN).
- 3. All the support units are connected to the other LISNs. The LISN should provide 50uH/50ohms coupling impedance.
- 4. The frequency range from 150 KHz to 30 MHz was searched.
- 5. Set the test-receiver system to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- 6. The measurement has to be done between each power line and ground at the power terminal.

#### 4.1.4. Test Setup Layout

#### LEGEND:

(1) Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 to 40 cm long.

(2) I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m.

(3) EUT connected to one LISN. Unused LISN measuring port connectors shall be terminated in 50  $\Omega$ . LISN can be placed on top of, or immediately beneath, reference ground plane.

(3.1) All other equipment powered from additional LISN(s).

(3.2) Multiple outlet strip can be used for multiple power cords of non-EUT equipment.

(3.3) LISN at least 80 cm from nearest part of EUT chassis.

(4) Cables of hand-operated devices, such as keyboards, mice, etc., shall be placed as for normal use.

(5) Non-EUT components of EUT system being tested.

(6) Rear of EUT, including peripherals, shall all be aligned and flush with rear of tabletop.

(7) Rear of tabletop shall be 40 cm removed from a vertical conducting plane that is bonded to the ground plane.

#### 4.1.5. Test Deviation

There is no deviation with the original standard.

#### 4.1.6. EUT Operation during Test

The EUT was placed on the test table and programmed in normal function.

## 4.1.7. Results of AC Power Line Conducted Emissions Measurement

| Temperature   | 24° <b>C</b>        | Humidity | 63%  |

#### Note:

Level = Read Level + LISN Factor + Cable Loss.

## 4.2. 99% Occupied Bandwidth Measurement

#### 4.2.1. Limit

No restriction limits. But resolution bandwidth within band edge measurement is 1% of the 99% occupied bandwidth.

#### 4.2.2. Measuring Instruments and Setting

Please refer to section 5 of equipments list in this report. The following table is the setting of the spectrum analyzer.

| Spectrum Parameters | Setting          |
|---------------------|------------------|
| Attenuation         | Auto             |
| Span Frequency      | > 26dB Bandwidth |
| RB                  | 300 kHz          |
| VB                  | 1000 kHz         |
| Detector            | Peak             |
| Trace               | Max Hold         |
| Sweep Time          | Auto             |

#### 4.2.3. Test Procedures

- 1. The transmitter output (antenna port) was connected to the spectrum analyzer in peak hold mode.
- 2. The resolution bandwidth of 300 kHz and the video bandwidth of 1000 kHz were used.
- 3. Measured the spectrum width with power higher than 26dB below carrier.

#### 4.2.4. Test Setup Layout

#### 4.2.5. Test Deviation

There is no deviation with the original standard.

4.2.6. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

#### 4.2.7. Test Result of 99% Occupied Bandwidth

| Temperature 25°C |                | Humidity       | 56%          |

## 4.3. Maximum Conducted Output Power Measurement

#### 4.3.1. Limit

For the band 5.15~5.25 GHz, the maximum conducted output power over the frequency band of operation shall not exceed the lesser of 50 mW (17dBm) or 4 dBm + 10log B, where B is the 26 dB emissions bandwidth in MHz. If transmitting antennas of directional gain greater than 6 dBi are used, both the maximum conducted output power and the peak power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

#### 4.3.2. Measuring Instruments and Setting

Please refer to section 5 of equipments list in this report. The following table is the setting of the spectrum analyzer.

| Spectrum Parameter | Setting  |
|--------------------|--|
| Attenuation        | Auto   |
| Span Frequency     | Encompass the entire emissions bandwidth (EBW) of the signal |
| RB                 | 1000 kHz   |
| VB                 | 3000 kHz   |
| Detector           | RMS  |
| Trace              | Average Sweep count 100                                      |
| Sweep Time         | Auto   |

#### 4.3.3. Test Procedures

- 1. The transmitter output (antenna port) was connected to the power meter.
- 2. Test was performed in accordance with KDB 789033 Guidelines for Compliance Testing of Unlicensed National Information Infrastructure (U-NII) Devices - Part 15, Subpart E, section (C) Maximum conducted output power =>(4) Method PM (Measurement using an RF average power meter) Multiple antenna systems was performed in accordance with KDB 662911 Emissions Testing of Transmitters with Multiple Outputs in the Same Band.
- 3. When measuring maximum conducted output power with multiple antenna systems, add every result of the values by mathematic formula.

#### 4.3.4. Test Setup Layout

#### 4.3.5. Test Deviation

There is no deviation with the original standard.

### 4.3.6. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

#### 4.3.7. Test Result of Maximum Conducted Output Power

# 4.4. Power Spectral Density Measurement

## 4.4.1. Limit

The power spectral density is defined as the highest level of power in dBm per MHz generated by the transmitter within the power envelope. The following table is power spectral density limits and decrease power density limit rule refer to section 4.3.1.

| Frequency Range | Power Spectral Density limit (dBm/MHz) |
|-----------------|--|
| 5.15~5.25 GHz   | 4                                      |

### 4.4.2. Measuring Instruments and Setting

Please refer to section 5 of equipments list in this report. The following table is the setting of the spectrum analyzer.

| Spectrum Parameter | Setting  |
|--------------------|--|
| Attenuation        | Auto   |
| Span Frequency     | Encompass the entire emissions bandwidth (EBW) of the signal |
| RB                 | 1000 kHz   |
| VB                 | 3000 kHz   |
| Detector           | RMS  |
| Trace              | AVERAGE  |
| Sweep Time         | Auto   |
| Trace Average      | 100 times  |

# 4.4.3. Test Procedures

- 1. The transmitter output (antenna port) was connected RF switch to the spectrum analyzer.
- Test was performed in accordance with KDB 789033 Guidelines for Compliance Testing of Unlicensed National Information Infrastructure (U-NII) Devices - Part 15, Subpart E, section (C) Maximum conducted output power => (d) Method SA-2 (trace averaging across on and off times of the EUT transmissions, followed by duty cycle correction).
- 3. Multiple antenna systems was performed in accordance with KDB 662911 in-Band Power Spectral Density (PSD) Measurements (1) Measure and sum the spectra across the outputs.
- 4. When measuring first spectral bin of output 1 is summed with that in the first spectral bin of output 2 and that from the first spectral bin of output 3 and so on up to the Nth output to obtain the value for the first frequency bin of the summed spectrum. The summed spectrum value for each of the other frequency bins is computed in the same way.

# 4.4.4. Test Setup Layout

## 4.4.5. Test Deviation

There is no deviation with the original standard.

# 4.5. Peak Excursion Measurement

### 4.5.1. Limit

The ratio of the peak excursion of the modulation envelope (measured using a peak hold function) to the maximum conducted output power (measured as specified above) shall not exceed 13 dB across any 1 MHz bandwidth or the emissions bandwidth whichever is less.

# 4.5.2. Measuring Instruments and Setting

Please refer to section 5 of equipments list in this report. The following table is the setting of the spectrum analyzer.

| Spectrum Parameter | Setting   |
|--------------------|---|
| Attenuation        | Auto  |
| Span Frequency     | Encompass the entire emissions bandwidth (EBW) of the signal  |
| RB                 | 1MHz (Peak Trace) / 1MHz (Average Trace)                      |
| VB                 | 3MHz (Peak Trace) / 3MHz (Average Trace)                      |
| Detector           | Peak (Peak Trace) / RMS                                       |
| Trace              | Peak : Trace :Max hold/Average: Trace Average Sweep Count 100 |
| Sweep Time         | AUTO  |

### 4.5.3. Test Procedures

- 1. The test procedure is the same as section 4.6.3.
- 2. Trace A, Set RBW =1MHz, VBW = 3MHz, Span >26dB bandwidth, Max. hold.
- 3. Delta Mark trace A Maximum frequency and trace B same frequency.
- 4. Repeat the above procedure until measurements for all frequencies were complete.

# 4.5.4. Test Setup Layout

This test setup layout is the same as that shown in section 4.6.4.

### 4.5.5. Test Deviation

There is no deviation with the original standard.

# 4.5.6. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

# 4.6. Radiated Emissions Measurement

For transmitters operating in the 5.15-5.35 GHz band: all emissions outside of the 5.15-5.35 GHz band shall not exceed an EIRP of -27 dBm/MHz (68.3dBuV/m at 3m). For transmitters operating in the In addition, In case the emission fall within the restricted band specified on 15.205(a), then the 15.209(a) limit in the table below has to be followed.

| Frequencies | Field Strength     | Measurement Distance |
|-------------|--------------------|----------------------|
| (MHz)       | (micorvolts/meter) | (meters)             |
| 0.009~0.490 | 2400/F(KHz)        | 300                  |
| 0.490~1.705 | 24000/F(KHz)       | 30                   |
| 1.705~30.0  | 30                 | 30                   |
| 30~88       | 100                | 3                    |
| 88~216      | 150                | 3                    |
| 216~960     | 200                | 3                    |
| Above 960   | 500                | 3                    |

# 4.6.1. Measuring Instruments and Setting

Please refer to section 5 of equipments list in this report. The following table is the setting of spectrum analyzer and receiver.

| Spectrum Parameter                        | Setting  |
|---|--|
| Attenuation                               | Auto   |
| Start Frequency                           | 1000 MHz                                       |
| Stop Frequency                            | 40 GHz   |
| RB / VB (Emission in restricted band)     | 1MHz / 3MHz for Peak, 1 MHz / 10Hz for Average |
| RB / VB (Emission in non-restricted band) | 1MHz / 3MHz for peak                           |

| Receiver Parameter     | Setting                          |
|------------------------|----------------------------------|
| Attenuation            | Auto                             |
| Start ~ Stop Frequency | 9kHz~150kHz / RB 200Hz for QP    |
| Start ~ Stop Frequency | 150kHz~30MHz / RB 9kHz for QP    |
| Start ~ Stop Frequency | 30MHz~1000MHz / RB 120kHz for QP |

## 4.6.2. Test Procedures

- Configure the EUT according to ANSI C63.10. The EUT was placed on the top of the turntable 0.8 meter above ground. The phase center of the receiving antenna mounted on the top of a height-variable antenna tower was placed 3 meters far away from the turntable.
- 2. Power on the EUT and all the supporting units. The turntable was rotated by 360 degrees to determine the position of the highest radiation.
- 3. The height of the broadband receiving antenna was varied between one meter and four meters above ground to find the maximum emissions field strength of both horizontal and vertical polarization.
- 4. For each suspected emissions, the antenna tower was scan (from 1 M to 4 M) and then the turntable was rotated (from 0 degree to 360 degrees) to find the maximum reading.
- 5. Set the test-receiver system to Peak or CISPR quasi-peak Detect Function with specified bandwidth under Maximum Hold Mode.
- 6. For emissions above 1GHz, use 1MHz VBW and RBW for peak reading. Then 1MHz RBW and 10Hz VBW for average reading in spectrum analyzer.
- 7. When the radiated emissions limits are expressed in terms of the average value of the emissions, and pulsed operation is employed, the measurement field strength shall be determined by averaging over one complete pulse train, including blanking intervals, as long as the pulse train does not exceed 0.1 seconds. As an alternative (provided the transmitter operates for longer than 0.1 seconds) or in cases where the pulse train exceeds 0.1 seconds, the measured field strength shall be determined from the average absolute voltage during a 0.1 second interval during which the field strength is at its maximum value.
- 8. If the emissions level of the EUT in peak mode was 3 dB lower than the average limit specified, then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions which do not have 3 dB margin will be repeated one by one using the quasi-peak method for below 1GHz.
- 9. For testing above 1GHz, the emissions level of the EUT in peak mode was lower than average limit (that means the emissions level in peak mode also complies with the limit in average mode), then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions will be measured in average mode again and reported.
- 10. In case the emission is lower than 30MHz, loop antenna has to be used for measurement and the recorded data should be QP measured by receiver. High Low scan is not required in this case.

# 4.6.3. Test Setup Layout

For radiated emissions below 1GHz

# 4.6.4. Test Deviation

There is no deviation with the original standard.

# 4.6.5. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

# 4.6.6. Results of Radiated Emissions (9kHz~30MHz)

| Temperature   | 21° <b>C</b>   | Humidity       | 56.4%       |
|---------------|----------------|----------------|-------------|
| Test Engineer | David Tseng    | Configurations | Normal Link |
| Test Date     | Sept. 05, 2012 |                |             |

| Freq. | Level  | Over Limit | Limit Line | Remark   |
|-------|--------|------------|------------|----------|
| (MHz) | (dBuV) | (dB)       | (dBuV)     |          |
| -     | -      | -          | -          | See Note |

Note:

The amplitude of spurious emissions that are attenuated by more than 20dB below the permissible value has no need to be reported.

Distance extrapolation factor = 40 log (specific distance / test distance) (dB);

Limit line = specific limits (dBuV) + distance extrapolation factor.

# 4.6.7. Results of Radiated Emissions (30MHz~1GHz)

# 4.7. Band Edge Emissions Measurement

## 4.7.1. Limit

For transmitters operating in the 5.15-5.35 GHz band: all emissions outside of the 5.15-5.35 GHz band shall not exceed an EIRP of -27 dBm/MHz (68.3dBuV/m at 3m). In addition, In case the emission fall within the restricted band specified on 15.205(a), then the 15.209(a) limit in the table below has to be followed.

| Frequencies | Field Strength     | Measurement Distance |
|-------------|--------------------|----------------------|
| (MHz)       | (micorvolts/meter) | (meters)             |
| 0.009~0.490 | 2400/F(KHz)        | 300                  |
| 0.490~1.705 | 24000/F(KHz)       | 30                   |
| 1.705~30.0  | 30                 | 30                   |
| 30~88       | 100                | 3                    |
| 88~216      | 150                | 3                    |
| 216~960     | 200                | 3                    |
| Above 960   | 500                | 3                    |

### 4.7.2. Measuring Instruments and Setting

Please refer to section 5 of equipments list in this report. The following table is the setting of the spectrum analyzer.

| Spectrum Parameter                        | Setting  |
|---|--|
| Attenuation                               | Auto   |
| Span Frequency                            | 100 MHz  |
| RB / VB (Emission in restricted band)     | 1MHz / 3MHz for Peak, 1 MHz / 10Hz for Average |
| RB / VB (Emission in non-restricted band) | 1 MHz / 3MHz for Peak                          |

### 4.7.3. Test Procedures

- 5. The test procedure is the same as section 4.6.3, only the frequency range investigated is limited to 100MHz around bandedges.
- 6. In case the emission is fail due to the used RB/VB is too wide, marker-delta method of FCC Public Notice DA00-705 will be followed.

## 4.7.4. Test Setup Layout

This test setup layout is the same as that shown in section 4.6.4.

### 4.7.5. Test Deviation

There is no deviation with the original standard.

# 4.7.6. EUT Operation during Test

The EUT was programmed to be in continuously transmitting mode.

# 4.7.7. Test Result of Band Edge and Fundamental Emissions

Item 3, 4 are the fundamental frequency at 5210 MHz.

Note:

Emission level (dBuV/m) = 20 log Emission level (uV/m)

Corrected Reading: Antenna Factor + Cable Loss + Read Level - Preamp Factor = Level

# 4.8. Frequency Stability Measurement

## 4.8.1. Limit

Manufacturers of U-NII devices are responsible for ensuring frequency stability such that an emissions is maintained within the band of operation under all conditions of normal operation as specified in the user's manual or ±20ppm (IEEE 802.11nspecification).

## 4.8.2. Measuring Instruments and Setting

Please refer to section 5 of equipments list in this report. The following table is the setting of the spectrum analyzer.

| Spectrum Parameter | Setting  |
|--------------------|--|
| Attenuation        | Auto   |
| Span Frequency     | Entire absence of modulation emissions bandwidth |
| RB                 | 10 kHz   |
| VB                 | 10 kHz   |
| Sweep Time         | Auto   |

#### 4.8.3. Test Procedures

- 7. The transmitter output (antenna port) was connected to the spectrum analyzer.
- 8. EUT have transmitted absence of modulation signal and fixed channelize.
- 9. Set the spectrum analyzer span to view the entire absence of modulation emissions bandwidth.
- 10. Set RBW = 10 kHz, VBW = 10 kHz with peak detector and maxhold settings.
- 11. fc is declaring of channel frequency. Then the frequency error formula is  $(fc-f)/fc \times 10^6$  ppm and the limit is less than ±20ppm (IEEE 802.11nspecification).
- **12.** The test extreme voltage is to change the primary supply voltage from 85 to 115 percent of the nominal value
- **13.** Extreme temperature rule is -30°C~50°C.

# 4.8.4. Test Setup Layout

#### 4.8.5. Test Deviation

There is no deviation with the original standard.

#### 4.8.6. EUT Operation during Test

The EUT was programmed to be in continuously un-modulation transmitting mode.

### 4.8.7. Test Result of Frequency Stability

## Voltage vs. Frequency Stability

| Voltage              | Measurement Frequency (MHz) |
|----------------------|-----------------------------|
| (V)                  | 5200                        |
| 126.50               | 5199.9781                   |
| 110.00               | 5199.9768                   |
| 93.50                | 5199.9770                   |
| Max. Deviation (MHz) | 0.023200                    |
| Max. Deviation (ppm) | 4.46                        |

#### Temperature vs. Frequency Stability

| Temperature          | Measurement Frequency (MHz) |
|----------------------|-----------------------------|
| (°C)                 | 5200                        |
| -30                  | 5199.9802                   |
| -20                  | 5199.9776                   |
| -10                  | 5199.9768                   |
| 0                    | 5199.9781                   |
| 10                   | 5199.9778                   |
| 20                   | 5199.9770                   |
| 30                   | 5199.9768                   |

| 50                   | 5199.9802                   |
| Max. Deviation (MHz) | 0.023200                    |
| Max. Deviation (ppm) | 4.46                        |

# 4.9. Antenna Requirements

# 4.9.1. Limit

Except for special regulations, the Low-power Radio-frequency Devices must not be equipped with any jacket for installing an antenna with extension cable. An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that the user can replace a broken antenna, but the use of a standard antenna jack or electrical connector is prohibited. Further, this requirement does not apply to intentional radiators that must be professionally installed.

# 4.9.2. Antenna Connector Construction

Please refer to section 3.3 in this test report; antenna connector complied with the requirements.

# 5. LIST OF MEASURING EQUIPMENTS
