1. ATTESTATION OF TEST RESULTS

COMPANY NAME: BELKIN INTERNATIONAL, INC.

> 12045 EAST WATERFRONT DRIVE PLAYA VISTA, CA 90094 U.S.A.

EUT DESCRIPTION: WIRELESS CHARGER

MODEL NUMBER: WIZ015

SERIAL NUMBER: 51V10F69B00107

DATE TESTED: SEPTEMBER 27, 2021 TO SEPTEMBER 30, 2021

APPLICABLE STANDARDS

STANDARD TEST RESULTS

FCC PART 1 SUBPART I & PART 2 SUBPART J Complies

UL Verification Services Inc. tested the above equipment in accordance with the requirements set forth in the above standards. The test results show that the equipment tested is capable of demonstrating compliance with the requirements as documented in this report.

The results documented in this report apply only to the tested sample, under the conditions and modes of operation as described herein. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. All samples tested were in good operating condition throughout the entire test program. Measurement Uncertainties are published for informational purposes only and were not taken into account unless noted otherwise.

This document may not be altered or revised in any way unless done so by UL Verification Services Inc. and all revisions are duly noted in the revisions section. Any alteration of this document not carried out by UL Verification Services Inc. will constitute fraud and shall nullify the document. This report must not be used by the client to claim product certification, approval, or endorsement by A2LA, NIST, any agency of the Federal Government, or any agency of the U.S. government.

2. TEST METHODOLOGY

This report contains data provided by the customer which can impact the validity of results. UL Verification Services Inc. is only responsible for the validity of results after the integration of the data provided by the customer.

All calculations were made in accordance with FCC OET Bulletin 65 Edition 97-01.

3. FACILITIES AND ACCREDITATION

UL LLC is accredited by A2LA, certification #0751.05, for all testing performed within the scope of this report. Testing was performed at the locations noted below.

	Address	ISED CABID	ISED Company Number	FCC Registration
	Building 1: 47173 Benicia Street, Fremont, CA 94538, USA	US0104	2324A	208313
	Building 2: 47266 Benicia Street, Fremont, CA 94538, USA	US0104	22541	208313
\boxtimes	Building 4: 47658 Kato Rd, Fremont, CA 94538, USA	US0104	2324B	208313

4. DECISION RULES AND MEASUREMENT UNCERTAINTY

METROLOGICAL TRACEABILITY 4.1.

All test and measuring equipment utilized to perform the tests documented in this report are calibrated on a regular basis, with a maximum time between calibrations of one year or the manufacturers' recommendation, whichever is less, and where applicable is traceable to recognized national standards.

4.2. **DECISION RULES**

The Decision Rule is based on Simple Acceptance in accordance with ISO Guide 98-4:2012 Clause 8.2. (Measurement uncertainty is not taken into account when stating conformity with a specified requirement.)

4.3. MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus:

PARAMETER	U _{Lab}
Magnetic Field Reading (A/m)	+/-0.04284 (A/m)
Electric Field Reading (V/m)	+/-0.03682 (V/m)

Uncertainty figures are valid to a confidence level of 95.45%.

5. KDB 680106 D01 SECTION 5b EQUIPMENT APPROVAL **CONSIDERATIONS**

Requirement	Device			
(1) Power transfer frequency is less than 1 MHz.	No. The maximum operating frequency is 1.778MHz.			
(2) Output power from each primary coil is less than or equal to 15 watts.	Yes. The maximum power is 5W.			
(3) The system may consist of more than one source primary coils, charging one or more clients. If more than one primary coil is present, the coil pairs may be powered on at the same time.	No. The system has one individual coil and only allows for capable wireless power transfer between one source and one client at any given time.			
(4) Client device is placed directly in contact with the transmitter.	Yes. The client device is placed directly in contact with the transmitter.			
(5)Mobile exposure conditions only (portable exposure conditions are not covered by this exclusion)	Yes. It is a mobile device.			
(6) The aggregate H-field	The worst case leakage			
strengths anywhere at or beyond	FCC Config 1: Flatbed Standby 326.5kHz	1.04%		
15 cm surrounding the device, and	FCC Config 2: Flatbed Charging Apple Watch 326.5kHz	1.04%		
20 cm away from the surface from all coils that by design can	FCC Config 3: Flatbed Charging Apple Watch 1.778MHz	0.18%		
simultaneously transmit, and while	FCC Config 4: Tilt Standby 326.5kHz	1.02%		
those coils are simultaneously	FCC Config 5: Tilt Charging Apple Watch 326.5kHz	1.15%		
energized, are demonstrated to be	FCC Config 6: Tilt Charging Apple Watch 1.778MHz	0.25%		
less than 50% of the applicable MPE limit.				

6. EQUIPMENT UNDER TEST

6.1. DESCRIPTION OF EUT

The EUT is a Wireless Charger with one charging coil that is capable of charging 1 Apple Watch at a time. The charging frequencies are 326.5 kHz and 1.778MHz, and the maximum power consumption is 5W.

6.2. WORST-CASE CONFIGURATION AND MODE

EUT is a dual frequency magnetic desktop charger. For all tests, the EUT was connected to an AC/DC power adapter. The EUT's charging pad can be positioned in two orthogonal orientations, X (flatbed) and Y (tilt).

The inner base of the EUT has the option to be elevated. After our investigation, this was found to be the worst mode of configuration.

Worst case orientation of the client devices have been investigated and there is no significant delta at each orientation.

For the entire testing, the EUT was investigated at its natural orientation.

All testing is based on direct contact with no shifts in position due to the embedded magnet in the charger pad.

Config	Mode	Descriptions	Client
1	Standby @326.5kHz	EUT standalone, charging pad in flatbed orientation with inner base elevated, powered by AC/DC adapter.	None
2	Operating @326.5kHz	Charging pad in flatbed orientation with inner base elevated, direct contact during charging between the	Legacy Apple Watch
3	Operating @1.778MHz	EUT & WPT Client, EUT is powered by AC/DC adapter. (~10%, 20~60%, and >75% Power Charging)	New Apple Watch
4	Standby@326.5kHz	EUT standalone, charging pad in tilt upright orientation with inner base elevated, powered by AC/DC adapter.	None
5	Operating @326.5kHz	Charging pad in tilt upright orientation with inner base elevated, direct contact during charging between the	Legacy Apple Watch
6	Operating @1.778MHz	EUT & WPT Client, EUT is powered by AC/DC adapter. (~10%, 20~60%, and >75% Power Charging)	New Apple Watch

7. TEST AND MEASUREMENT EQUIPMENT

The following test and measurement equipment was used for the tests documented in this report:

Test Equipment List								
Description	Manufacturer	Model	S/N	Label ID	Cal Due	Cal Date		
Electric and Magnetic Field Probe	Narda	EHP-200A	160WX41008	T1085	03/16/2022	03/16/2021		
EMI TEST RECEIVER	Rohde & Schwarz	ESW44	101724	PRE0179367	02/21/2022	02/21/2021		

8. DUTY CYCLE

LIMITS

None; for reporting purposes only.

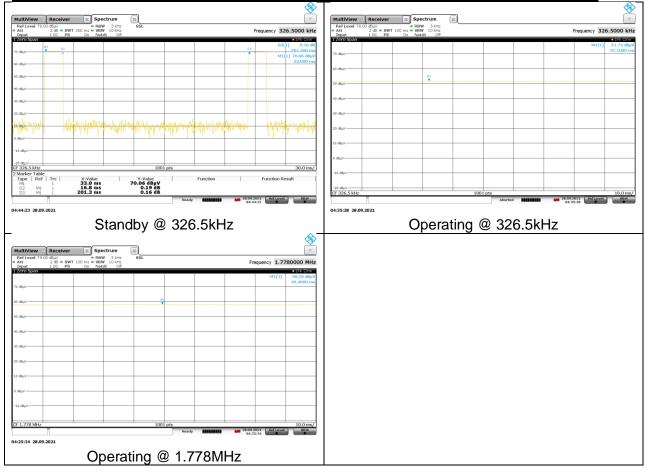

PROCEDURE

Zero-Span Spectrum Analyzer Method.

ON TIME AND DUTY CYCLE RESULTS

Test Engineer: 10629 RL

Mode	ON Time B (msec)	Period (msec)	Duty Cycle x (linear)	Duty Cycle (%)	Duty Cycle Correction Factor (dB)
Standby @ 326.5kHz	16.80	201.63	0.08	8.33	10.79
Operating Frequency @ 326.5kHz	1.00	1.00	1.00	100.00	0.00
Operating Frequency @ 1.778MHz	1.00	1.00	1.00	100.00	0.00

9. MAXIMUM PERMISSIBLE RF EXPOSURE

9.1. FCC LIMITS AND SUMMARY

§1.1310 The criteria listed in Table 1 shall be used to evaluate the environmental impact of human exposure to radio-frequency (RF) radiation as specified in §1.1307(b), except in the case of portable devices which shall be evaluated according to the provisions of §2.1093 of this chapter.

TABLE 1—LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

Frequency range (MHz)	Electric field strength (V/m)	Magnetic field strength (A/m)	Power density (mW/cm²)	Averaging time (minutes)			
(A) Limits for Occupational/Controlled Exposures							
0.3–3.0 3.0–30 30–300 300–1500 1500–100,000	614 1842# 61.4	1.63 4.89/f 0.163	*(100) *(900/f²) 1.0 f/300 5	6 6 6 6			
(B) Limits for General Population/Uncontrolled Exposure							
0.3–1.34	614 824/f	1.63 2.19/f	*(100) *(180/f²)	30 30			

TABLE 1—LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)—Continued

Frequency range (MHz)	Electric field strength (V/m)	Magnetic field strength (A/m)	Power density (mW/cm²)	Averaging time (minutes)
30–300 300–1500 1500–100,000	27.5	0.073	0.2 f/1500 1.0	30 30 30

RESULT

Test Engineer: 29435 TC Test Date: 9/27/2021-9/30-2021

f = frequency in MHz
* = Plane-wave equivalent power density
NOTE 1 TO TABLE 1: Occupational/controlled limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when an individual is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure.

NOTE 2 TO TABLE 1: General population/uncontrolled exposures apply in situations in which the general public may be exposed, or in which persons that are exposed as a consequence of their employment may not be fully aware of the potential for exposure or can not exercise control over their exposure.

9.1.1. MAXIMUM RESULT SUMMARY
