## 1. General information

### 1.1 Identification of the EUT

Product: 2.4G wireless module  
Model No.: RB9500  
Frequency Range: 2402MHz ~ 2476MHz  
Channel Number: 149 Channels  
Frequency of Each Channel: 2402MHz+0.5k, k=0~148  
Type of Modulation: FSK  
Rated Power: DC5 V  
Power Cord: N/A  
Sample Received: Nov. 18, 2016  
Sample condition: Workable  
Test Date(s): Nov. 21, 2016 ~ Dec. 19, 2016

Note 1: The test report only allows to be revised within three years from its original issued date unless further standard or the requirement was noticed.

Note 2: When determining the test conclusion, the Measurement Uncertainty of test has been considered.

## 1.2 Additional information about the EUT

The EUT is a 2.4G wireless module, and was defined as information technology equipment.

Product SW version :	Rom base, no sw
Product HW version :	RB9500 RA1
Radio SW version :	Rom base, no sw
Radio HW version :	A7105
Test SW Version :	zz_rf_certify_20161026

For more detail features, please refer to user's Manual.

## 1.3 Antenna description

The EUT uses a permanently connected antenna.

Antenna Gain : 2 dBi  
Antenna Type : PCB Antenna  
Connector Type : Fixed

## 1.4 Peripherals equipment

Peripherals	Manufacturer	Product No.	Serial No.	Description of Data Cable
Notebook PC	DELL	Latitude D610	1YWZKIS	Mini USB cable 0.5 meter

## 2. Test specifications

### 2.1 Test standard

The EUT was performed according to the procedures in FCC Part 15 Subpart C Paragraph 15.249 for non-spread spectrum devices.

The test of radiated measurements according to FCC Part15 Section 15.33(a) had been conducted and the field strength of this frequency band were all meet limit requirement, thus we evaluate the EUT pass the specified test.

### 2.2 Operation mode

TX-MODE is based on “specific command” and the program can select different frequency and modulation.

The signal is maximized through rotation and placement in the three orthogonal axes.

**X axis**

**Y axis**

**Z axis**

After verifying three axes, we found the maximum electromagnetic field was occurred at X axis. The final test data was executed under this configuration.

### 3. Radiated emission test FCC 15.249 (C)

#### 3.1 Operating environment

Temperature: 25 °C  
Relative Humidity: 50 %  
Atmospheric Pressure: 1008 hPa  
Test date: Nov. 30, 2016 ~ Dec. 19, 2016

#### 3.2 Test setup & procedure

**Radiated emission from 9 kHz to 30 MHz uses Loop Antenna:**

**Radiated emission from 30 MHz to 1 GHz uses Bilog Antenna:**

**Radiated emission above 1 GHz uses Horn Antenna:**

Radiated emissions were investigated cover the frequency range from 30MHz to 1000MHz using a receiver RBW of 120kHz record QP reading, and the frequency over 1GHz using a spectrum analyzer RBW of 1MHz and 3MHz VBW record Peak and Average reading (15.209 paragraph) on the report.

The EUT for testing is arranged on a turntable. If some peripherals apply to the EUT, the peripherals will be connected to EUT and the whole system. During the test, all cables were arranged to produce worst-case emissions. The signal is maximized through rotation. The height of antenna and polarization is changing constantly for exploring for maximum signal level. The height of antenna can be up to 4 meters and down to 1 meter.

The measurement for radiated emission will be done at the distance of three meters unless the signal level is too low to measure at that distance. In the case of the reading under noise floor, a pre-amplifier is used and/or the test is conducted at a closer distance. And then all readings are extrapolated back to the equivalent three meter reading using inverse scaling with distance.

### 3.3 Emission limit

#### 3.3.1 Fundamental and harmonics emission limits

Frequency (MHz)	Field Strength of Fundamental		Field Strength of Harmonics	
	(mV/m@3m)	(dBuV/m@3m)	(uV/m@3m)	(dBuV/m@3m)
2400-2483.5	50	94	500	54

### 3.3.2 General radiated emission limits

Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50dB below the level of the fundamental or to the general radiated emission limits in paragraph 15.209, whichever is the lesser attenuation.

Frequency MHz	15.209 Limits (dB $\mu$ V/m@3m)
30-88	40
88-216	43.5
216-960	46
Above 960	54

Remark:

1. In the above table, the tighter limit applies at the band edges.
2. Distance refers to the distance in meters between the measuring instrument antenna and the closed point of any part of the device or system

### 3.4 Radiated spurious emission test data

#### 3.4.1 Measurement results: frequency range from 9 kHz to 30 MHz

The test was performed on EUT under continuously transmitting mode. Low, Middle, High Channel were verified. The worst case occurred at TX Low Channel.

Temperature: 25 °C  
Relative Humidity: 50 %  
Atmospheric Pressure: 1008 hPa  
Test date: Nov. 30, 2016~ Dec. 19, 2016

### 5.2 Test setup & procedure

The EUT are connected to the main power through a line impedance stabilization network (LISN). This provides a 50 ohm/50uH coupling impedance for the measuring equipment. The peripheral devices are also connected to the main power through a LISN that provides a 50ohm/50uH coupling impedance with 50ohm termination. Both sides (Line and Neutral) of AC line are checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.4/2003 on conducted measurement. The bandwidth of the field strength meter (R & S Test Receiver ESCI 30) is set at 9kHz.

The EUT configuration please refer to the “Conducted set-up photo.pdf”.

### 5.3 Emission limit

## 6. 20dB Bandwidth test

### 6.1 Operating environment

Temperature: 25 °C  
Relative Humidity: 50 %  
Atmospheric Pressure: 1008 hPa  
Test date: Nov. 21, 2016,

### 6.2 Test setup & procedure

- Step 1: The 20dB bandwidth was measured using a 50 ohm spectrum analyzer  
Step 2: The span range for the SA display shall be between two times and five times the OBW.  
Step 3: The nominal IF filter bandwidth (3 dB RBW) should be approximately 1 % to 5 % of the OBW, unless otherwise specified, depending on the applicable requirement.  
Step 4: The test was performed at 3 channels (lowest, middle and highest channel). The maximum 20dB modulation bandwidth is in the following Table.

### 6.3 Measured data of modulated bandwidth test results

Mode	Channel	Frequency (MHz)	20dB Bandwidth(MHz)
2.4G	Low	2402	0.0631
	Middle	2439	0.0634
	High	2476	0.0655

Please see the plot below.

## 20dB Occupied Bandwidth @ 2.4G mode 2402MHz

## 20dB Occupied Bandwidth @ 2.4G mode 2439MHz

### 20dB Occupied Bandwidth @ 2.4G mode 78 2476MHz
