SECTION 8

SAR EVALUATION

Under the attached TCB exclusion list, the SAR evaluation is not required.

Note that the reason SAR is not required is because the 50% duty cycle power is under the level at which SAR is required for controlled environment devices:

50% duty cycle power = $0.5 * 6.15\text{W} = 3.075\text{W}$. Controlled environment SAR would be necessary when the 50% duty cycle power = $900/.174$ or 5.2W .

Appendix A: TCB Exclusions List Revised: 17 July 2002

Transmitters included in a TCB Scope and identified in the following **do not** qualify for TCB approval. Review & Approval procedures are described in a separate document that will be revised as evaluation and approval procedures are updated.

Transmitter**Category****Exclusions List**

I) All

Transmitters

- a) devices not evaluated according to most recent versions of FCC OET 65 Supplement C or other applicable FCC policies, procedures, and TCB training notes
- b) applications for equipment approval or permissive change requiring any change in equipment class (e.g., TNB to TNE, etc.) or change in RF exposure limits or exposure category
- c) devices employing numerical simulation or computational modeling techniques to show RF exposure compliance
- d) transmitters operating in non-US protocols or radio services (e.g., PHS, etc.)

II) Portable

Transmitters

- a) devices with operating frequencies above 6 GHz
 - b) devices in standalone configurations with output power ² greater than the high threshold ³
 - c) transmitters that are implanted or operated within a person's body
 - d) devices operating according to occupational exposure requirements, except for push-to-talk radios
 - e) devices containing multiple transmitters that transmit simultaneously, when *routine SAR evaluation* ⁴ is required for the highest output (dominant) transmitter, and any of the other (non-dominant) transmitters is operating at higher than 5 mW
 - f) devices containing multiple transmitters with simultaneous transmission, when *routine SAR evaluation* is not required, and the sum of the individual ratios of the output power divided by the high threshold is greater than one (1)
 - g) modules for operation in licensed services that are not configured in a dedicated host device
 - h) unlicensed modules used alone or with another transmitter
 - 1) without simultaneous transmission, and the output power of any transmitter is greater than 100 mW with operating frequency less than or equal to 3 GHz, or 50 mW with frequency greater than 3 GHz but less than or equal to 6 GHz
 - 2) with simultaneous transmission, and the sum of the individual ratios of the output power divided by the low threshold ³ is greater than one (1)
- feet, and ankles.

Exposure category low threshold high threshold

general population (60 / f_{GHz}) mW, d < 2.5 cm

(120 / f_{GHz}) mW, d ≥ 2.5 cm (900 / f_{GHz}) mW, d < 20 cm

occupational (375 / f_{GHz}) mW, d < 2.5 cm

(900 / f_{GHz}) mW, d ≥ 2.5 cm (2250 / f_{GHz}) mW, d < 20 cm

⁴ require SAR evaluation to qualify for TCB approval.
