# Maximum Permissible Exposure (MPE) Evaluation Report 

Report No. : EME-071141<br>Model No. : DSM-750<br>Issued Date : Dec. 17, 2007

| Applicant | : D-Link Co. <br> No.289, Shinhu 3rd Rd., Neihu District, Taipei City 114, <br>  <br>  <br> Taiwan |
| :--- | :--- |
| Test By $\quad$: Intertek Testing Services Taiwan Ltd. <br>  <br>  <br>  <br> No. 11, Lane 275, Ko-Nan 1 Street, Chia-Tung Li, <br> Shiang-Shan District, Hsinchu City, Taiwan |  |

This test report consists of 7 pages in total. It may be duplicated completely for legal use with the allowance of the applicant. It shall not be reproduced except in full, without the written approval of Intertek Laboratory. The test results) in this report only applies to the tested samples).

## Summary of Tests

MPE Evaluation meet FCC OET No. 65: 1997/ IEEE C95.1-1999

Wireless Media Player-Model: DSM-750
FCC ID: KA2-20070819

| Test | Reference | Results |
| :---: | :---: | :---: |
| MPE Evaluation | FCC Guidelines for Human Exposure IEEE C95.1 | Pass |

## 1. Introduction

The EUT operates in the 2.4 GHz ISM band. Due to the EUT (include antenna) at its normal operation distance is at least 20 cm from the human body, the EUT was defined as a Mobile Device.

The reason to do the MPE Evaluation is to avoid the RF hazard to human body. The maximum output power and gain of the antenna were used to calculate the limited Power density (S) at 20cm distance away from the product. The limit for Maximum Permissible Exposure (MPE) specified in FCC 1.1310 is followed.

According to 1.1307 (b)(1), systems operating under the provisions of this section shall be operated in a manner that ensure that the public is not exposed to radio frequency energy level in excess of the Commission's guideline.

## 2. RF Exposure Limit

According to FCC 1.1310: The criteria listed in the following table shall be used to evaluate the environmental impact of human exposure to radio-frequency (RF) radiation as specified in 1.1307(b).

## Limits for Maximum Permissible Exposure (MPE)

| Frequency <br> Range <br> $(\mathrm{MHz})$ | Electric Field <br> Strength <br> $(\mathrm{V} / \mathrm{m})$ | Magnetic Field <br> Strength <br> $(\mathrm{A} / \mathrm{m})$ | Power Density <br> $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ | Average Time <br> (minutes) |
| :---: | :---: | :---: | :---: | :---: |
| (A) Limits for Occupational / Control Exposures |  |  |  |  |
| $30-300$ | 61.4 | 0.163 | 1.0 | 6 |
| $300-1500$ | - | - | $\mathrm{F} / 300$ | 6 |
| $1500-100,000$ | - | - | 5 | 6 |
| (B) Limits for General Population / Uncontrolled Exposure |  |  |  |  |
| $30-300$ | 27.5 | 0.073 | 0.2 | 30 |
| $300-1500$ | - | - | F/1500 | 30 |
| $1500-100,000$ | - | - | 1.0 | 30 |

F= Frequency in MHz

## 3. RF Exposure calculations

From §FCC 1.1310 table 1, the maximum permissible RF exposure for an uncontrolled environment is $1 \mathrm{~mW} /\left(\mathrm{cm}^{2}\right)$
Power density ( S ) is calculated by the following formula:
$\mathrm{S}=(\mathrm{P} * \mathrm{G}) / 4 \pi \mathrm{R}^{2}$
where, $\mathrm{S}=$ Power density $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$
$\mathrm{P}=$ Output power to antenna (mW)
$\mathrm{R}=$ Distance between radiating structure and observation point (cm)
$\mathrm{G}=\mathrm{Gain}$ of antenna in numeric
$\pi=3.1416$
Example:
Assume a mobile device operates at 2412 MHz and its maximum output power is 50 mW , and the maximum gain of antenna is 1 (numeric) $/ 0 \mathrm{dBi}$.
then the power density $(\mathrm{S})=(50 * 1) / 4 * \pi^{*} 20^{2}=0.00995\left(\mathrm{~mW} / \mathrm{cm}^{2}\right)$

## 4. Test results

Test Mode: 802.11b mode

$\left.$| Channel | Channel <br> Frequency <br> $(\mathrm{MHz})$ | Maximum <br> antenna gain <br> (numeric) | Output power <br> to antenna <br> $(\mathrm{mW})$ | Power density |
| :---: | :---: | :---: | :---: | :---: | :---: |

The Notice in Installation Manual has been stated as below:
While installing and operating this transmitter, the radio frequency exposure limit of $1 \mathrm{~mW} /\left(\mathrm{cm}^{*} \mathrm{~cm}\right)$ may be exceeded at distances close to the transmitter. therefore, the user must maintain a minimum distance of 20 cm from the device at all time.
