886-3-5636789

1.D-Link Corporation will take the responsibility seriously to meet the antenna requirements of FCC for our 802.11a WLAN products. This Mini-PCI will be installed in the Access Point and Wireless SOHO Gateway as a RF module. These devices are intended to operate at 5.15~5.25GHz band with an integral antenna as detailed in 15.407 (d) is required. The housing of these devices is protected by special screw, therefore the end users can not use the other antennas that are not tested with Mini-PCI. D-Link will not sell this Mini-PCI alone to any end user or OEM distributors.

2. D-Link will sell the device bundle with the standard AC Adaptor (with ferrite) to all of these Mini-PCI based products.

Sincerely,

Shih-ling Chy

Project Manager
