G.10. PASS/FAIL

In reference to the results outlined in G.9 the DUT passes the requirements as stated in the reference standards as follows:

FCC CFR 47§1.1310 Table 1(b) 1) The DUT must comply with the minimum spacing requirement of 20 cm to ensure an exposure of not more than f/1500 (0.57) mW/cm² for frequencies between 300 and 1500 MHz and 1 mW/cm² for frequencies between 1500 and 100,000 MHz.

The calculated power density at a 20 cm distance for the cellular band is 0.08303 mW/cm² for the attached swivel dipole antenna configuration, and 0.09104 mW/cm² for the vehicle-mount antenna configuration. The calculated power density at a 20 cm distance for the PCS band is 0.1162 mW/cm² for the swivel dipole antenna configuration, and 0.1274 mW/cm² for the vehicle-mount antenna configuration, and 0.1274 mW/cm² for the vehicle-mount antenna configuration.

G.11. SIGN-OFF

I attest to the accuracy of the data. All measurements reported herein were performed by me and are correct to the best of my knowledge and belief. I assume full responsibility for the completeness of these measurements.
