This mobile transmitting device has demonstrated compliance with the applicable technical standards as indicated in the measurement report and was tested in accordance with the measurement procedures specified in FCC 47 CFR Part 15.247 and Industry Canada RSS-210 Issue 5.

I attest to the accuracy of the data. All measurements reported herein were performed by me or were under my supervision and are correct to the best of my knowledge and belief. I assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

This test report shall not be reproduced partially, or in full, without the prior written approval of Celltech Labs Inc. The results and statements contained in this report pertain only to the device(s) evaluated.

1.0 SCOPE

This report outlines the measurements made and results collected during electromagnetic emissions testing of the Itronix Corporation IX260+ Rugged Laptop PC with internal Cirronet BT2022 Bluetooth Transmitter co-transmitting with the Senao NL-3054MP 802.11b/g 2.4 GHz DSSS WLAN Mini-PCI Card, each connected to separate RangeStar internal surface-mount antennas located in the upper rear side of the LCD display. This report describes the results obtained when inter-modulation product measurements were made with both transmitters installed in the IX260+ Rugged Laptop PC as described, and transmitting simultaneously. The measurement results were applied against the EMC requirements and limits outlined in the technical rules and regulations set forth in the Federal Communication Commission Code of Federal Regulations Title 47 Part 15 Subpart C, and Industry Canada Radio Standards Specification RSS-210 Issue 5.

4.0 FACILITIES AND ACCREDITATIONS

The facilities used in collecting the test results outlined in this report are located at 1955 Moss Court, Kelowna, British Columbia, Canada, V1Y 9L3. The radiated and conducted emissions sites conform with the requirements set forth in ANSI C63.4 and are filed and listed with the FCC under Registration Number 714830 and Industry Canada under File Number IC 3874.

5.2 DUT Description

The DUT consisted of the IX260+ Rugged Laptop PC containing a Cirronet BT2022 Bluetooth Transmitter connected to an Internal RangeStar Surface-Mount Antenna installed in the upper left side rear edge of the LCD display. Co-located within the IX260+ Rugged Laptop PC was the Senao NL-3054MP 802.11b/g WLAN Mini-PCI Card connected to a second Internal RangeStar Surface-Mount Antenna installed in the upper right side rear edge of the LCD display. Photographs of the DUT placement and construction are shown in Appendix A.

5.7 Mode(s) of Operation Tested

5.7.1 Bluetooth Transmitter

Customer supplied software was used to place the Bluetooth Transmitter at the appropriate channel with the power level and modulation for the specific measurement. During the co-transmission testing, the Bluetooth transmitter was set in its hopping mode with the following settings:

TX Frequency Range: 2402 - 2480 MHz	
Software Power Gain Settings:	220 /45
RF Peak Conducted Output Power Tested:	Ch. 0 - +16.56 dBm Ch. 39 - +16.09 dBm Ch. 78 - +15.32 dBm
Modulation Type(s):	GFSK 0.5 BT Gaussian
Battery Type(s):	11.1V Lithium-lon, 6.0Ah (Model: A2121-2)

5.7.2 WLAN Mini-PCI Card

TX Frequency Range:	2412 - 2462 MHz Ch. 1 (2412 MHz), Ch. 6 (2437 MHz) & Ch. 11 (2462 MHz) measured unless otherwise noted			
Software Power Gain Settings:	802.11b set to power setting of 17.5 with xpdGain at 6 802.11g set to power setting of 18.5 with xpdGain at 12			
RF Peak Conducted Output Power Tested:	802.11b 2412 MHz(1 Mbps) = 20.43 dBm 802.11b 2437 MHz(1 Mbps) = 20.33 dBm 802.11b 2462 MHz(1 Mbps) = 20.29 dBm 802.11g 2412 MHz(6 Mbps) = 20.10 dBm 802.11g 2437 MHz(6 Mbps) = 20.21 dBm 802.11g 2462 MHz(6 Mbps) = 20.17 dBm			
Modes / Data Rates	802.11b (1, 5.5, 11 Mbps checked in prescan) (1 Mbps determined to be worse case and used unless otherwise noted)			
Tested*:	802.11g (6, 36, 54 Mbps checked in prescan) (6 Mbps determined to be worse case and used unless otherwise noted)			
Modulation Type(s):	OFDM with BPSK, QPSK, 16QAM, 64QAM, DBPSK, DQPSK, CCK			
Battery Type(s):	11.1V Lithium-ion, 6.0Ah (Model: A2121-2)			

5.7.3 DUT Exercising Software Description

The DUT was configured and exercised using customer supplied test software that allowed an operator to set the parameters of the Bluetooth transmitter and WLAN Mini-PCI Card operation. The settings used are described in each appendix. More specific information on the configuration and exercising can be found in the referenced single-transmit test reports.

5.8 Configuration Description

The DUT was configured, as described by the client as being representative of what would be delivered to a final customer. More specific details may be included in each appendix.

5.8.1 Configuration Justification

The DUT was tested in a configuration described by the client as being worse case but typical of normal use.

6.0 PASS/FAIL CRITERIA

Unless otherwise noted in the Appendices, the pass/fail criteria is the limit set forth in the reference standards. A DUT is considered to have passed the requirements, if the data collected during the described measurement procedure is no greater than the specified limits as defined. The pass/fail statements made in this report only apply to the unit tested.

B.5. MEASUREMENT EQUI	PMENT SETUP
Measurement Equipment Connections	The conducted emissions were measured on each of the two AC powerline leads connected to the DUT's power supply brick. A two line LISN was used to make this measurement. A drawing of the equipment setup is shown in B.7
	Each of the monitor ports from the 2-line LISN was connected in turn to the spectrum analyzer. The port not connected to the analyzer was terminated in a 50-ohm load. A pre-scan of the peak emission levels was made of the 150 kHz – 30 MHz range split in 4 equal frequency bands. The following were the instrumentation settings:
Measurement Equipment Settings	Spectrum Analyzer: Start Frequency and Stop Frequency set by software for each of the four bands RBW: 100 kHz VBW: 300 kHz Sweep: 500 mS
	Quasi-Peak Adapter: Normal - Automatic Bandwidth Setting: 9 kHz
	The resulting data from each band was corrected and collected by software and presented in the graphical representations shown in B.9 for the two leads.
	A defined set of frequency points of interest on each lead were used by software to optimize a set of readings for each type of detector (peak, quasi-peak and average). This data was corrected by the software is presented in the tables shown in section B.S.

B.8. DUT OPERATING DESCRIPTION						
Bluetooth	While hopping channels, the Bluetooth transmitter was set to transmit a data stream with a max. power setting.					
WLAN	The WLAN transmitter was set to transmit with a max. power setting for 2462 MHz in Mode b.					
PC	Other than operating the Bluetooth software and running MS windows, no PC exercising was performed.					
Peripherals	All peripherals were active, but no specific traffic was initiated.

D.5. MEASUREMEN	T EQUIPMENT SETUP
Measurement Equipment Connections	The equipment was connected as shown in the setup drawing in D.6.
Measurement Equipment Settings	To evaluate the maximum peak power, the 26 dB bandwidth needs to be determined. This is performed with the spectrum analyzer using the following setting: RBW – 300 kHz VBW – 1MHz Span – 50 MHz Detector – Peak Average – Power Trace Average – 100 Once the 26 dB bandwidth is determined, the channel power is measured within the band with the following spectrum analyzer settings: RBW – 1 MHz VBW – 3 MHz Detector – Peak Average – Power Integrate BW – equal to specific -26 dB EBW

D.7. DUT OPERATING DESCRIPTION

The worst-case configuration was determined from prescan investigations. Measurements were made at three channels throughout the band, Low Channel (2412 MHz), Mid Channel (2437 MHz), High Channel (2462 MHz) and for both Modes b and g.

E.8. DUT OPERATING DESCRIPTION

Measurements were made of the bands that may contain inter-modulation products with both the Bluetooth and WLAN radios transmitting. Measurements were made for each combination of WLAN channels and Modes (low and high, Mode b and g) with the Bluetooth transmitter hopping or on a worse case channel when defined.

Test Report S/N:	102604KBC-T575-E	Issue 1.0			
Test Date(s):	01Nov04 - 06Dec04				
Test Type(s):	FCC §15.247 IC RSS-210 Issue 5				
Lab Registration(s):	FCC #714830	IC Lab	File #3874		

E.9.3. Out-of-Band Spurious Field Strength not in a Restricted Band (WLAN Mode b co-transmitting with Bluetooth)

No emissions that could be attributed to the WLAN and Bluetooth co-transmitting were measured within 20 dB of the limit.

E.9.4. Out-of-Band Spurious Field Strength not in a Restricted Band (WLAN Mode g co-transmitting with Bluetooth)

No emissions that could be attributed to the WLAN and Bluetooth co-transmitting were measured within 20 dB of the limit.

E.10. PASS/FAIL

In reference to the results outlined in E.9, the DUT passes the requirements as stated in the reference standards as follows: FCC 15.247 (c): All emissions within any 100kHz bandwidth outside the operating frequency band are greater than 20 dB below the maximum 100 kHz bandwidth signal within the operating band.

E.11. SIGN-OFF

I attest to the accuracy of the data. All measurements reported herein were performed by me and are correct to the best of my knowledge and belief. I assume full responsibility for the completeness of these measurements.

Formulae

Total CF (dB) = Antenna Factor (dB)+ Cable Factor (dB) + Other Factor (Amplifier Gain, Filter Loss, etc) (dB)

Field Strength (dBuV/m) = SA Reading (dBuV) + Total CF (dB/m)

Limit Distance Correction (dB) = 40 * log(d1/d2) for f < 30 MHz, 20*log(d1/d2) for f > 30 MHz; where d1 is the measurement distance and d2 is the published limit distance

Limit (dBuV/m) = Published Limit (dBuV/m) + Limit Distance Correction (dB)

Margin (dB) = Limit (dBuV/m) - Field Strength (dBuV/m)

*The frequency points reported describe the highest local emission measured and are used to describe the measured intermodulation product. No out-of-band emissions were measured above the levels noted.

Where there is acceptable margin between the peak emission reported and the average limit stated, the average limit is referenced. Where the average limit is exceeded by the peak emission or the margin unacceptable, the peak limit is referenced and an average measurement made and referenced to the average limit.

F.10. PASS/FAIL

In reference to the results outlined in F.9, the DUT passes the requirements as stated in the reference standards as follows: FCC 15.205 (a) (b) and 15.209 (a): No emissions were measured within the restricted bands as outlined in 15.205 that exceeded the limits stated in 15.209.

F.11. SIGN-OFF

I attest to the accuracy of the data. All measurements reported herein were performed by me and are correct to the best of my knowledge and belief. I assume full responsibility for the completeness of these measurements.

G.10. PASS/FAIL

In reference to the results outlined in G.9 the DUT passes the requirements as stated in the reference standards as follows:

1) The DUT must comply with the minimum spacing requirement of 20 cm to ensure an exposure of not more than 1 mW/cm².

G.11. SIGN-OFF

I attest to the accuracy of the data. All measurements reported herein were performed by me and are correct to the best of my knowledge and belief. I assume full responsibility for the completeness of these measurements.
