Statement

The Itronix Laptop uses a standard GSM/GPRS PCMCIA card AC 750 from Sierra Wireless built in the ruggedized Laptop. The SIM card is accessible from through the card slot on the outside.

The installation of the GSM/GPRS card is done by the manufacturer and not by the user.

The card uses a built in antenna, which provides by construction a distance of in minimum 20 cm to the user.

Since the GSM card wasn't changed all conducted results from the approval test of the AC 750 Card were used. The radiated measurements showed unchanged values for the conducted output power.
