Re: FCC ID: KCH520R

To Whom It May Concern:

The following application is submitted on behalf of our client, Sensus Metering Systems, for evaluation of FCC ID: KCH520R under a class II permissive change.

The purpose of this application is to substitute obsolete VCO/PLL (LMX1601) and charge pump voltage doubler (SC1462) circuits with new VCO/PLL Synthesizer IC LMX2531LQ1742 and charge pump voltage doubler IC (LM2660MMX), respectively. The new LMX2531LQ1742 combines both the VCO and PLL functions into a single IC as opposed to using a discrete VCO circuit in conjunction with a PLL IC. Additionally, a 3 VDC linear regulator is used at input of the VCO/PLL synthesizer and buffer amplifier circuits instead of a 2.7 VDC regulator.

The FCC ID: KCH520R was evaluated as a standalone module in three orthogonal orientations.

Sincerely,
