RE: FCC ID: KL7-612T-V2 and IC: 2404A-604T

Attention: Richard Fabina

Please find our responses to your comments on this application below:

1. The IC portion is missing the REL letter. Please provide a letter as indicated in the last page of the ATCB IC application form.

Noted, the document "IC Listing Requirements.pdf" has been uploaded

2. If the appearance of the device has changed due to the changes to the chip, please provide new internal photos of the modified device. If the appearance has not changed because of changes to the chip, please state so in a cover letter exhibit.

The product appearance has not changed, only the chip process changed, a letter "ST-604 ATCB Class II Letter_6-11-07.pdf" has been uploaded.

3. For your information – For the FCC, a Class II permissive change application requires a description of the changes made to the device. An application of this type is easier to process if this information is placed in a cover letter exhibit along with a statement whether the change(s) will be made in all units (including previous production) or will change(s) be made only in those units produced after the change is authorized. The test report should only contain test results to make it easier to process.

Noted, a letter "ST-604 ATCB Class II Letter_6-11-07.pdf" has been uploaded.

4. For your information – For IC, a Class II permissive change application requires information about the changes to the radio equipment and a brief statement why the modified product still qualifies for certification. An application of this type would be easier to process if this information is placed in a cover letter exhibit. Test report should only contain test results to make it easier to process.

Noted, a letter "ST-604 ATCB Class II Letter_6-11-07.pdf" has been uploaded.
