REPORT SUMMARY

Emergency Beacons Limited Testing of the
McMurdo Limited
G5 Smartfind Plus

Product Service

1.1 INTRODUCTION

The information contained in this report is intended to show verification of the Emergency Beacon Limited Testing of the McMurdo Limited G5 Smartfind Plus to the requirements of Cospas-Sarsat T.007 Issue 4 - Rev 4 October 2009.

Objective	To perform Emergency Beacon Testing to determine the Equipment Under Test's (EUT's) compliance with the Test Specification, for the series of tests carried out.
Manufacturer	McMurdo Limited
Model Number(s)	G5 Smartfind Plus
Serial Number(s)	TUV Ref: TSR 0002 / Unique ID: 193DF380C6FFBFF
Number of Samples Tested	1
Test Specification/Issue/Date	Cospas-Sarsat T.007 Issue 4 - Rev 4 October 2009
Incoming Release Date	Application Form 15 November 2010
Date of Receipt of Test Samples	18 November 2010
Order Number Date	PC0004329 29 October 2010
Start of Test	17 November 2010
Finish of Test	09 March 2011
Name of Engineer(s)	M P Hardy M Russell
Related Documents	Cospas-Sarsat T.001 Issue 3 - Rev 10 October 2009

Product Service

1.2 APPLICATION FORM

1.2.1 Beacon Manufacturer and Beacon Model

Beacon Manufacturer	McMurdo Ltd
Beacon Model	G5 Smartfind Plus (a) & (m)
Other Model Names	SGE406II (a) & (m), EG50:AUTO & EG50:MAN, Kannad Marine Sport+, McMurdo Smartfind A5G

1.2.2 Beacon Type and Operational Configurations

Beacon Type	Beacon used while:	Tick where appropriate
EPIRB	Floating in water or on deck or in a safety raft	☒
PLB	On ground and above ground	☐
	On ground and above ground and floating in water	☐
ELT Survival	On ground and above ground	☐
	On ground and above ground and floating in water	☐
ELT Auto Fixed	Fixed ELT with aircraft external antenna	☐
ELT Auto Portable	In aircraft with an external antenna	☐
	On ground, above ground, or in a safety raft with an integrated antenna	☐
ELT Auto Deployable	Deployable ELT with attached antenna	☐
Other (specify)		☐

1.2.3 Beacon Characteristics

Characteristic	Specification
Operating frequency	406.040 MHz
Operating temperature range	Tmin = -20°C Tmax = +55 °C
Operating lifetime	48 hours
Battery chemistry	Lithium Manganese Dioxide
Battery cell model name, size and number of cells	CR 2/3AH (3x3) or CR123A (3X3)
Battery cell manufacturer	Varta/Panasonic
Battery pack manufacturer and part number	Varta/Panasonic
Battery pack replacement period	8 years

Product Service

Characteristic	Specification
Oscillator type (e.g. OCXO, MCXO, TCXO)	TCXO
Oscillator manufacturer	Rakon
Oscillator part name and number	E5344LF
Oscillator satisfies long-term frequency stability requirements (Yes or No)	Yes
Antenna type: Integral or Other (e.g. External, Detachable – specify type)	Integral
Antenna manufacturer	Doig/Pressco
Antenna part name and number	82-909
Navigation device type (Internal, External or None)	Internal
Features in beacon that prevent degradation to 406 MHz signal or beacon lifetime resulting from a failure of navigation device or failure to acquire position data (Yes, No, or N/A)	Yes
Features in beacon that ensures erroneous position data is not encoded into the beacon message (Yes, No or N/A)	Yes
Navigation device capable of supporting global coverage (Yes, No or N/A)	Yes
For Internal Navigation Devices	
- Geodetic reference system (WGS 84 or GTRF)	WGS 84
- GNSS receiver cold start forced at every beacon activation (Yes or No)	Yes
- Navigation device manufacturer	Ublox
- Navigation device model name and part Number	NEO-6M
- GNSS system supported (e.g. GPS, GLONASS, Galileo)	GPS, Galileo
For External Navigation Devices	
- Data protocol for GNSS receiver to beacon interface	
- Physical interface for beacon to navigation device	
- Electrical interface for beacon to navigation device	
- Part number of the external navigation interface device (if applicable)	
- Navigation device model and manufacturer (if beacon designed to use specific devices)	

Product Service

Characteristic	Specification	
Self-Test Mode Characteristics	Self-Test Mode	Optional GNSS Self-Test Mode
- Self-test has separate switch position (Yes or No)	Yes	Yes
- Self-test switch automatically returns to normal position when released (Yes or No)	Yes	Yes
- Self-test activation can cause an operational mode transmission (Yes or No)	No	No
- Self-test causes a single beacon self-test message burst only regardless of how long the self-test activation mechanism applied (Yes or No)	Yes	Yes
- Results of self-test indicated by (e.g. Pass / Fail Indicator Light, Strobe Light, etc.)	Pass/Fail LED	Pass/Fail LED
- Self-test can be activated from beacon remote activation points (Yes or No)	No	No
- Self-test performs an internal check and indicates that RF power emitted at 406 MHz and 121.5 MHz if beacon includes a 121.5 MHz homer (Yes or No)	Yes	No
- Self-test transmits a signal(s) other than at 406 MHz (Yes & details or No)	Yes 121.5MHz	No
- Self-test can be activated directly at beacon (Yes or No)	Yes	Yes
- List of Items checked by self-test	406.040 MHz/121.5Mhz Power, PLL Lock, GPS module	GPS Position fix
- Self-test transmission burst duration (440 or 520 ms)	520 ms	520 ms
- Self-test format bit ("0" or "1")	1	1
- Maximum duration of Self Test / GNSS Self-test	9	15min +/-10 seconds
- Maximum number of GNSS Self Tests (beacons with internal navigation devices only)	N/A	12
- Self-test results in transmission of a single burst, irrespectively of the test result (Yes or No)	N/A	No
- Maximum number of self-tests during battery pack replacement period	96	N/A

Product Service

Characteristic	Specification
Beacon includes a homer transmitter (if yes identify frequency of transmission)	121.5 MHz
-Homer Transmit Power	17 dBm
-Homer Duty Cycle	Continuous %
-Duty Cycle of Homer Swept Tone	36 %
Beacon includes a strobe light (Yes or No)	Yes
- Strobe light intensity	>0.75cd
- Strobe light flash rate	21
Beacon transmission repetition period satisfies C/S T.001 requirement that two beacon's repetition periods are not synchronised closer than a few seconds over 5 minute period, and the time intervals between transmissions are randomly distributed on the interval 47.5 to 52.5 seconds (Yes or No)	Yes
Other ancillary devices (e.g. voice transceiver, remote control, external audio and light indicators, external activation device). List details on a separate sheet if insufficient space to describe.	N/A
Beacon includes automatic activation mechanism (Yes or No) Specify type of automatic beacon activation mechanism	Yes. Sea water switch contact
Beacon includes software or hardware features and functions not listed above and non-related to 406 MHz (Yes or No) List features and use a separate sheet if insufficient space	No

Product Service

1.2.4 Information Provided by the Cospas-Sarsat Accepted Test Facility

Name and Location of Beacon Test Facility: TÜV Product Service Ltd, United Kingdom

Date of Submission for Testing: November 2010

Applicable C/S Standards:

Document	Issue	Revision	Date
C/S T.001	3	10	Oct-09
C/S T.007	4	4	Oct-09

I hereby confirm that the 406 MHz beacon described above has been successfully tested in accordance with the Cospas-Sarsat Type Approval Standard (C/S T.007) and complies with the Specification for Cospas-Sarsat 406 MHz Distress Beacons (C/S T.001) as demonstrated in the attached report.

1.3 PRODUCT INFORMATION

1.3.1 Technical Description

The Equipment Under Test (EUT) was a McMurdo Limited G5 Smartfind Plus as shown in the photograph below. A full technical description can be found in the manufacturer's documentation.

Equipment Under Test

1.3.2 Physical Test Configuration

The Equipment Under Test (EUT) was operated using its own power source (internal battery). The EUT was configured so that the antenna port was connected to the 50 Ω test system using a coaxial cable. The test configuration for all tests is identical with the exception of Satellite Qualitative and Position Accuracy Time and Position Accuracy.

The EUT was modified to represent a fully packaged beacon, similar to the proposed production beacons equipped with its proper antenna. This EUT was used to perform Satellite Qualitative and Position Acquisition Time and Position Accuracy. The test configuration for these tests is a function of the beacon type and the operational environments supported by the beacon, as declared by the manufacturer.

Product Service

1.3.3 Modes of Operation

Modes of operation of the EUT during testing were as follows:

Off/Standby Mode

- Main switch to “OFF/0” position
- No apparent activity

Self-test

- Separate “Test” button held for approximately 2 seconds
- List of items checked as per Customer Supplied Information (Application Form)
- No navigation data applied

Long/GPS/GNSS Self-test

- Separate “Test” button held for approximately 15 seconds
- List of items checked as per Customer Supplied Information (Application Form)
- Navigation data applied as applicable (e.g. none applied for timeout, data applied for ‘fast acquisition’)

Operating

- Switch to “ON” position
- 121 Homer active and offset
- GPS operating in normal duty cycle for the following navigation input conditions
- No navigation data applied
- Physical configuration as below

All modes

All mode descriptions are applicable to all tests unless otherwise stated. Additional method of activation includes:

- Water contacts

All Navigation input descriptions are applicable to all tests unless otherwise stated.

Product Service

1.4 MODIFICATIONS

Modification 0 - No modifications were made to the test sample during testing.

1.5 REPORT MODIFICATION RECORD

Issue 1 – First Issue

Issue 2 – Inclusion of additional test results as required by C/S.

Battery Current Measurement Results

Battery Discharge Current

The discharge current for the batteries was measured for each of the following beacon states.

Beacon in the Off or Standby State, "Standby Current"

Beacon performing a Self-test, "Self-test Current"

Beacon activated and transmitting, "Operating Current"

The individual tests were conducted for the following durations:

Standby Current	:	30 minutes	(1798720 ms)
Self-test Current	:	8.88 seconds	(8880 ms)
GPS Self-test Current	:	960 seconds	(959920 ms)
Operating Current	:	15 minutes	(899200 ms)

Assumptions / Supplied Data

Battery Replacement Interval	:	8 years
Battery Capacity	:	4.65 Ah
Battery Self Drain	:	1.00 % per year
Self-test Interval	:	12 tests per year
GPS Self-test Interval	:	1.50 tests per year

Test Results

Mode Current	=	Accumulated Charge / Time	
Standby Current	=	13108980.4 pC / 1798720 ms	= 7.29 nA
Self-test Current	=	867400.8 uC / 8880 ms	= 97.68 mA
GPS Self-test Current	=	39432216.5 uC / 959920 ms	= 41.08 mA
Operating Current	=	32973874.1 uC / 899200 ms	= 36.67 mA

Battery Preconditioning / Discharge Time Calculations

Battery Self Drain	=	Capacity - [(100% - Self Drain/Year%) ^{Replacement Interval} x Capacity]
	=	4.65 - ((1 - 0.0100) ⁸ x 4.65) = 0.3592 Ah
Standby Drain	=	Hours per year x Battery Replacement Interval x Standby Current
	=	365 x 24 x 8 x 7.29 x 10 ⁻⁹ = 0.0005 Ah
Worst Case	=	1.65 x 0.0005 Ah = 0.0008 Ah
Self-test Drain	=	Self-tests per battery x Self-test Current x Self-test duration (hrs)
	=	12 x 8 x 97.68 x 10 ⁻³ x (8.88 / 3600) = 0.0231 Ah
Worst Case	=	1.65 x 0.0231 Ah = 0.0382 Ah
GPS Self-test Drain	=	GPS Self-tests per battery x GPS Self-test Current x GPS Self-test duration (hrs)
	=	1.5 x 8 x 41.08 x 10 ⁻³ x (960 / 60) = 0.1314 Ah
Worst Case	=	2.65 x 0.1314 Ah = 0.2169 Ah
Total Drain	=	Self Drain + Standby Drain + Self-test Drain + GPS Self-test Drain
	=	0.3592 + 0.0008 + 0.0382 + 0.2169 Ah = 0.6151 Ah

Battery Preconditioning / Discharge Time	=	Worst Case drain / Operational Current
	=	0.6151 / (36.67 x 10 ⁻³)
	=	<u>16.77 hours</u>

Note: Operating Current Max and Average values taken when GPS receiver switched off to give worst case discharge time.

Required discharge was 16.77 hours; actual discharge performed was 17.00 (over test to give worst case result).

Battery Current Graphs

Beacon Operating Current

As per C/S T.007 Table F-E.1:

Beacon Operating Modes	Mode: Manually selectable or Automatic	Measurement Interval	Average Current, mA	Peak Current, mA
406/121 Transmitters Active GPS Receiver cycle (Switch Activation)*	Manual	86 hours	37.80 ^{note 1}	Not measured
406/121 Transmitters Active GPS Receiver on (Switch Activation)	Manual	15 mins	52.52	1324.93
406/121 Transmitters Active GPS Receiver off (Switch Activation)	Manual	15 mins	36.67**	1293.35
406/121 Transmitters Active GPS Receiver cycle (Water contact Activation)	Automatic	86 hours	37.20 ^{note 1}	Not measured
406/121 Transmitters Active GPS Receiver on (Water contact Activation)	Automatic	15 mins	53.41 ^{note 2}	1310.9
406/121 Transmitters Active GPS Receiver off (Water contact Activation)	Automatic	15 mins	35.96	1308.56
Self Test	Manual	9 sec	97.68	1352.99
GNSS Self Test (No GPS Signal Present)	Manual	15 mins	41.08	1678.09
GNSS Self Test (GPS Signal Present)	Manual	15 mins	37.08	1592.72
Standby	Automatic	30 mins	0.007	0.011

At all times the sampling interval was 80 ms nominal.

* Operating modes used during the Battery Discharge procedure and the Operating Lifetime test (subject to GPS Receiver Duty Cycle).

** Operating mode used to calculate battery current discharge time.

Note 1: This is an approximate calculated value over the life test of the beacon, based on customer supplied information regarding the GPS receiver duty cycle. The GPS receiver duty cycle only operates for the first 44 hours of the test (51% of 86 hours) and is only actually active for 14% of that time.

Switch Activation: $(52.52\text{mA (GPS On)} \times 0.14 \text{ (% Duty Cycle On)}) + (36.67\text{mA (GPS Off)} \times 0.86 \text{ (% Duty Cycle Off)}) = 38.89\text{mA}$

$(38.89\text{mA} \times 0.51 \text{ (51% of life duration)}) + (36.67\text{mA} \times 0.49 \text{ (49% of life duration)}) = \mathbf{37.80\text{mA}}$
(Approximate overall average operating current)

Product Service

Water contact Activation: $53.41\text{mA (GPS On)} \times 0.14 (\% \text{ Duty Cycle On}) + (35.96\text{mA (GPS Off)} \times 0.86 (\% \text{ Duty Cycle Off})) = 38.40\text{mA}$

$(38.40\text{mA} \times 0.51 (51\% \text{ of life duration})) + (35.96\text{mA} \times 0.49 (49\% \text{ of life duration})) = \underline{\underline{37.20\text{mA}}}$
(Approximate overall average operating current)

Note 2: The average operating current of this mode appears to be slightly higher than that of the mode selected for the test. However the customer supplied information regarding the duty cycle of the GPS receiver indicates an off time of around 86%. The GPS receiver cycle is also only active for the first 44 hours of operation. For this reason the operating mode with the higher GPS off time was selected.

2.5 NAVIGATION SYSTEM

2.5.1 Equipment Under Test and Modification State

G5 Smartfind Plus 406 GPS EPIRB S/N: Unique ID: 193DF380C6FFBFF - Modification State 0

2.5.2 Date of Test

30 November and 01 December 2010

2.5.3 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.5.4 Environmental Conditions

Ambient temperature 21.9 - 23 °C
Relative Humidity 18 - 24 %

2.5.5 Test Results

National Protocol

Position Data Default Values (C/S T.007 A.3.8.1)

No position data was provided for > 4 hours before the test started. The beacon was activated and operated for 30 minutes without providing data. Message content was checked for all bursts during this period.

36 Hex Message	Message Count
FFFE2F8C9F0018DFC0FF04F9E4379F3C0010	36

Product Service

Position Acquisition Time and Position Accuracy (C/S T.007 A.3.8.2)

Locations:

A.3.8.2.1:	50°52.121 ' N	1° 14.685'W	①
A.3.8.2.2:	51° 22.583'N	001° 49.833'W	②

The appropriate position was applied, the EUT activated and time to first message containing valid position data timed.

Configuration as per C/S T.007	C/S T.007 Section A.3.8.2.1		C/S T.007 Section A.3.8.2.2	
	Time to Acquire Position (sec)	Location Error in metres	Time to Acquire Position (sec)	Location Error in metres
Configuration 5	51	31.3	103	49.2
Configuration 7	51	31.3	51	49.2
Configuration 8	51	31.3	51	49.2

Positional accuracy was calculated using the Haversine Formula, The Earth's radius was taken as 6367km.

ANNEX A

INTERIM TCXO PROCEDURE

Interim Procedure for the Determination of Compliance of 406 MHz Beacons equipped with a TCXO with Cospas-Sarsat Type Approval Requirements

Two data sets, Temperature Gradient Test Data (see section 2.3) and TCXO Manufacturer Data (file reference "E5344 Date Code JG Serial Number 6188.xlsx"), were combined and 'synchronised' based on time into the Temperature Gradient profile.

Data synchronised was:

R_{tot}	The Medium Term Stability – Residual Frequency Variation measured during the Temperature Gradient test
R_{osc}	The Medium Term Stability – Residual Frequency Variation provided for the specific oscillator in the beacon tested
S_{tot}	the Medium Term Stability – Slope measured during the Temperature Gradient test
S_{osc}	The Medium Term Stability – Slope provided for the specific oscillator in the beacon tested

The individual data pair matching and the following calculations can be found in the supporting Document 75911555 Spreadsheet CS IP TCXO Rev 1 Spreadsheet.xlsx.

NB: The values shown in the calculation steps herein are displayed rounded to 3 decimal places. For the actual calculation the **unrounded** value is used, using the rounded figure may provide different values.

1. Residual Component of the Medium-Term Frequency Stability

The contribution of the beacon design (R_{beacon}) was calculated for each matched data pair as per the following equation:

$$R_{beacon} = \sqrt{R_{tot}^2 - R_{osc}^2}$$

If R_{osc} was greater than R_{tot} , then allowance was made for measurement inaccuracies by adding/subtracting the measurement uncertainty contained within document C/S T.008 from R_{tot}/R_{osc} (MU = 0.1 ppm).

NB: If $R_{osc} - MU$ was greater than $R_{tot} + MU$, i.e. the error was persistent, the data pair was discarded.

NB: If R_{osc} was less than MU (which would result in a negative adjusted R_{osc}) then R_{osc} was set to zero (0), i.e. $R_{beacon} = R_{tot}$.

Total discards for this test was 1051 (41.9%).

The maximum was chosen:

$$\text{Maximum } R_{beacon} = 1.712 \times 10^{-9}$$

The worst-case beacon residual component performance ($R_{\text{beacon_max}}$) is then recalculated by adding the maximum oscillator contribution ($R_{\text{osc_max}}$ = i.e. 2.0 ppb) as follows:

$$R_{\text{beacon_max}} = \sqrt{R_{\text{beacon}}^2 + R_{\text{osc_max}}^2}$$

$$R_{\text{beacon_max}} = \sqrt{(1.712 \times 10^{-9})^2 + (2.0 \times 10^{-9})^2}$$

$$R_{\text{beacon_max}} = \sqrt{(2.929 \times 10^{-18}) + (4.0 \times 10^{-18})}$$

$$R_{\text{beacon_max}} = \sqrt{6.929 \times 10^{-18}}$$

$$R_{\text{beacon_max}} = 2.632 \times 10^{-9}$$

The performance after five years ($R_{\text{beacon_5year_max}}$) is estimated by adding an ageing contribution ($R_{\text{aging_contribution}}$ = 0.2 ppb).

$$R_{\text{beacon_5year_max}} = R_{\text{beacon_max}} + R_{\text{aging_contribution}}$$

$$R_{\text{beacon_5year_max}} = 2.632 \times 10^{-9} + 0.2 \times 10^{-9}$$

$$R_{\text{beacon_5year_max}} = 2.832 \times 10^{-9}$$

The final value obtained shall be less than the Cospas-Sarsat requirement for the medium-term frequency stability residual, 3.0 ppb:

2. Positive and Negative Slopes

A similar procedure is used for the evaluation of the Medium Term Stability – Slope beacon design contribution (S_{beacon}) except that results were divided amongst four categories:

Positive Static: Positive S_{tot} result during the steady state temperature portion of the test
Positive Gradient: Positive S_{tot} result during the temperature change portion of the test
Negative Static: Negative S_{tot} result during the steady state temperature portion of the test
Negative Gradient: Negative S_{tot} result during the temperature change portion of the test

Note: Only the first calculation is broken down, step-by-step to show the method. All calculation results are then shown in the summary table along with the corresponding limits.

Positive Static:

The contribution of the beacon design (R_{beacon}) was calculated for each matched data pair as per the following equation:

$$S_{\text{beacon}} = \sqrt{S_{\text{tot}}^2 - S_{\text{osc}}^2}$$

If $|S_{\text{osc}}|$ was greater than $|S_{\text{tot}}|$ then allowance was made for measurement inaccuracies by adding/subtracting the measurement uncertainty contained within document C/S T.008 from $S_{\text{tot}}/S_{\text{osc}}$ (MU = 0.1 ppm).

NB: If $|S_{\text{osc}}| - \text{MU}$ was greater than $|S_{\text{tot}}| + \text{MU}$, i.e. the error was persistent, then the data pair was discarded.

NB: If $|S_{\text{osc}}|$ was less than MU (which would result in a negative adjusted S_{osc}) then S_{osc} was set to zero (0), i.e. $S_{\text{beacon}} = S_{\text{tot}}$.

NB: For a proportion of data pairs the slope direction (sense) did not match, e.g. a positive S_{tot} matched to a negative S_{osc} , this was termed a “sense mismatch”. In the absence of guidance in C/S IP TCXO, two methods were pursued:

Method A:

No action taken in case of sense mismatch. (The above MU allowances were still performed and persistent errors still discarded.)

Total discards for this method was 27 (1.1%).

Method B:

If either of S_{tot} and S_{osc} was positive and the other negative (i.e. sense mismatch) the data pair was discarded. (The above MU allowances were still performed and persistent errors still discarded.)

Total discards for this test was 993 (39.5%).

The maximum was chosen:

Method A:

$$\text{Maximum } S_{\text{beacon}} = 3.756 \times 10^{-10}$$

Method B:

$$\text{Maximum } S_{\text{beacon}} = 2.644 \times 10^{-10}$$

The worst case beacon positive slope component performance ($S_{\text{beacon_max}}$) is then recalculated by adding the maximum oscillator contribution ($S_{\text{osc_max}}$ = i.e. 0.7 ppb) as follows:

$$S_{\text{beacon_max}} = \sqrt{S_{\text{beacon}}^2 + S_{\text{osc_max}}^2}$$

Method A:

$$S_{\text{beacon_max}} = \sqrt{(3.756 \times 10^{-10})^2 + (0.7 \times 10^{-9})^2}$$

$$S_{\text{beacon_max}} = \sqrt{(1.411 \times 10^{-19}) + (0.49 \times 10^{-18})}$$

$$S_{\text{beacon_max}} = \sqrt{6.311 \times 10^{-19}}$$

$$S_{\text{beacon_max}} = 7.944 \times 10^{-10}$$

Method B:

$$S_{\text{beacon_max}} = 7.490 \times 10^{-10}$$

The Cospas-Sarsat performance requirement is 1.0 ppb /min.

No ageing factors were applied for the calculations of the negative and positive slope.

Slope Summary Table – Method A:

All Values in min^{-1}	S_{beacon}	$S_{\text{osc_max}}$	$S_{\text{beacon_max}}$	Cospas-Sarsat performance requirement
Positive Slope Static Temp	3.756×10^{-10}	$+0.7 \times 10^{-9}$	7.944×10^{-10}	1.0×10^{-9}
Positive Slope Gradient Temp	5.445×10^{-10}	$+1.7 \times 10^{-9}$	1.785×10^{-9}	2.0×10^{-9}
Negative Slope Static Temp	$-[4.460 \times 10^{-10}]$	-0.7×10^{-9}	$-[8.300 \times 10^{-10}]$	-1.0×10^{-9}
Negative Slope Gradient Temp	$-[5.237 \times 10^{-10}]$	-1.7×10^{-9}	$-[1.779 \times 10^{-9}]$	-2.0×10^{-9}

Values in square brackets (e.g. “[1.234x10⁻⁹]”) are from equations giving positive results, but as the Root-mean-square method strips the positive or negative sense of numbers, they are reverted to a negative number to restore their sense.

Slope Summary Table – Method B:

Values differing from Method A are asterisked and highlighted in red (e.g.*).

All Values in min^{-1}	S_{beacon}	$S_{\text{osc_max}}$	$S_{\text{beacon_max}}$	Cospas-Sarsat performance requirement
Positive Slope Static Temp	2.664×10^{-10} *	$+0.7 \times 10^{-9}$	7.490×10^{-10} *	1.0×10^{-9}
Positive Slope Gradient Temp	5.445×10^{-10}	$+1.7 \times 10^{-9}$	1.785×10^{-9}	2.0×10^{-9}
Negative Slope Static Temp	$-[3.818 \times 10^{-10}]$ *	-0.7×10^{-9}	$-[7.974 \times 10^{-10}]$ *	-1.0×10^{-9}
Negative Slope Gradient Temp	$-[5.237 \times 10^{-10}]$	-1.7×10^{-9}	$-[1.779 \times 10^{-9}]$	-2.0×10^{-9}

ANNEX B

CUSTOMER SUPPLIED INFORMATION

**Statement on protection against beacon degradation
due to internal navigation device failure**

The internal GPS navigation device is an NEO-6M 50-channel module made by uBlox in the Switzerland.

Software protection:

The positional data is sent from the GPS module in serial NMEA format. This data is checked for validity by examining the message field quality bit and calculated HDOP (Horizontal dilution of precision) figure. The quality bit is calculated by the GPS module to determine the quality of the position fix and requires three or more satellites with good signal to noise ratios. The HDOP figure is calculated from the relative geometry of the satellites used to determine the position fix. The smaller the figure the better the positional accuracy. The software rejects position fixes with a HDOP figure greater than 20. This figure being derived from extensive trials work.

With these checks in place it is considered unlikely that false position data could be encoded in the 406MHz message.

If no valid GPS data is available, the beacon will revert to transmitting default position data.

Hardware protection:

The serial NMEA data is input to the micro-controller, this input is only connected to the GPS module. If the uBlox GPS module fails in such a way to output incorrect logic levels, this input is protected by diodes from excessive voltage on the input. A fault on the NMEA line will not inhibit normal operation of the beacon.

The GPS module is not continuously powered in order to comply with the maximum positional update rate defined in C/S T.001. Hence in any one hour, at least 64 406MHz transmissions are made with the GPS module in-active.

The GPS module is supplied by P-channel logic level FET, which is enabled or disabled by a discrete control line from the microprocessor.
