KLS-PLB-3 Exhibit 7: Test Set-up Photos

The independent Test House which has carried out the testing for this product provides its test reports as sealed pdf documents, therefore it is not possible to extract the test set-up photos.

The test set-up for Radiated Emissions EMC Testing can be found at:

KLS-PLB-3 Exhibit 6g - 75904389 Report 07 Issue 4.pdf

page 23

The product is battery powered, and programmed through an infra-red interface, so that Conducted Emissions EMC Testing is not applicable.
