Subject: Fwd: IOWA EXPORT-IMPORT TRADING CO.FCC ID:  
KNFMULTIRCU7TX

Dear Sir:

Regarding the detailed description of change to the subject project, please compare the attached new schematics and old one first.

(See attached file: circuit---new.jpg)(See attached file: circuit---old.JPG)

You will see the main chip (U1)and R1 & R2 changed. The U1 is used to trigger some code to frequency modulation circuit. The R1 and R2 has changed value for reducing power level to meet FCC requirement.

The component U1 function is same as U 2 in old schematics, and the other components are same as old circuit. So the applicant hopes to use same ID on market, and submitted the class 1 permissive change.

Please tell us if you have further comments to the project. Thank you!

James Lee
