#### STAT ID Family Certification Letter

There are two models of the STAT ID transmitter. These models are A22270940 and A22270944. The antenna orientation was changed in the A22270944 to negate some of the effects of the interaction between the human body and the ferrite loop antenna. Both models have identical schematics and no component changes set one apart from the other. Both models utilize the same plastic enclosure. The differences are; slight adjustments to the printed circuit board layout were made to accommodate a different orientation of the 40.68 MHz ferrite loop antenna.

We would like to certify both of these products under the same grant, FCC ID: KNK-B

Regards,  
Mike Singer
