EUT Description:

The EUT provides awareness of personal security systems.

Tests Performed

The test methods performed on the EUT are shown below:

FCC Part 15, Subpart C	Test Method
15.209(a)	Field Strength of Fundamental
15.209 (a)	Field Strength of Spurious

General Test Requirements

1. The measurement procedures of ANSI C63.10-2013 were utilized as specified in FCC Part 15, Subpart C, Section 15.31(a)(3).
2. All measurements were performed at a 3 meter test distance.
3. The EUT was rotated throughout 360 degrees for all radiated emissions measurements as specified in FCC Section 15.31(f)(5).
4. All readily accessible EUT controls were adjusted in such a manner as to maximize the level of emissions in accordance with FCC Section 15.31(g).
5. Appropriate accessories were attached to all EUT ports during the performance of radiated emissions measurements as required by FCC Section 15.31(i).

Requirements and Test Results

Requirement:

FCC Section 15.209 (a)

Field Strength of Fundamental

FCC Section 15.209(a) – The field strength of any emission within the band 1.705 MHz – 30 MHz shall not exceed 30 uV/M at 30 meters.

Field Strength Measurement & Calculation:

The following spectrum analyzer settings were used:

RBW = 1 MHz for $f \geq 1$ GHz, 100 kHz for $f \leq 1$ GHz

VBW \geq RBW

Detector Function = Peak or Average as applicable

Trace = Max Hold

Sweep = Auto

The maximized field strength of the emission was calculated as follows:

$$F_C = M_R + C_F$$

Where:

F_C = Corrected Field Strength Reading in dB μ V/m

M_R = Uncorrected Meter Reading in dB μ V

C_F = Correction Factor in dB (Pre-Amp + Antenna Factor + Cable Loss + Distance Factor)

For frequencies below 30 MHz a distance factor of -40dB/decade was utilized

Requirements and Test Results (con't)

15.209 (a) Field Strength of Fundamental

Radiated Emissions Measurement Procedure:

The field strength of the fundamental emission was measured with a spectrum analyzer or EMI Receiver. The EUT was placed on an 80cm high wooden test stand located 3 meters from the test antenna on a FCC listed open area test site. Emissions from the EUT were maximized by re-orientating the test sample, rotating the test sample 360 degrees, changing the orientation of the receive antenna and raising and lowering the test antenna from 1 – 4 meters. The maximized field strength of each observed emission was measured, recorded and compared to the specified limits of 15.209(a) as appropriate.

- **Results:** The maximized measured field strength of the fundamental emission was below the specified test limit of 15.209(a). See test data.

Requirement:
