RE: Lear Corporation  
IC Number: KOBFTD06A

The following comments are in response to the questions raised on the above application.

1) Report appears to identify this device (in part) as a receiver, but still may be correct depending on manufacturer reference. Please review.

The test report has been corrected and uploaded.

2) Please confirm if the "0" in FTD06A is a zero or letter O. The label implies this is a letter in the FCC ID, number in the IC model, while the 731 implies it is a zero in the FCC ID. Please confirm.

The letter is a zero and NOT the letter O. The manufacturer insists that the label does have zeros in it, but distortion due to reduced resolution makes them somewhat different in shape.
