T1 = release point

The transmission times are for all buttons nearly the same!

Worst case duration for a single pulse transmission in any 100ms time window

The measured worst case duration for a single pulse transmission in any 100 ms time window is 24.493 ms.

Maximum transmitting duration in every 100 ms period: 24.493 ms

Averaging factor = $20 \cdot \log(24.493/100) = -12.2$ dB
