# **TEST REPORT**

Report No. : AW0059539(9)

Date : August 30, 2018

### **1** General Information

1.1 General Description

These are 900MHz transmitter with difference sensor for home security. These transmitters connect to the home security system with 900MHz for difference protection on garage door, door/window and water flooding.

The devices are powered by one 1.5V AA battery. The devices have a 900MHz transceiver for communication with home security system. The 900 MHz transceiver is operating with 910 - 918MHz.

The 900MHz transceiver uses RF IC, CMT2300A with external clock, 26MHz to generate a FSK modulation signal for communication by an integral coil antenna, 0.0dBi. Its channel frequencies are 910MHz, 912MHz, 914MHz, 916MHz and 918MHz. The channels selection is randomly and will change other channels if any interference occurs on that channels.

Three models are same on electrical and mechanical aspect except difference switch.

Product Description	Model	Detector sensor
Water sensor transmitter	2WA9	Metal contact detector
Garage door sensor transmitter	2GS9	Tilt Switch
Door/Window sensor transmitter	2WD9	Magnetic switch

Date : August 30, 2018

1.2 Location of the test site

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 2014. A Semi-Anechoic Chamber Testing Site is set up for investigation and located at:

Ground Floor, Yan Hing Centre, 9 – 13 Wong Chuk Yeung Street, Fo Tan, Shatin, New Territories, Hong Kong.

Conducted emissions measurements are investigated and also taken pursuant to the procedures of ANSI C63.4 - 2014. A shielded room is located at :

Ground Floor, Yan Hing Centre, 9 – 13 Wong Chuk Yeung Street, Fo Tan, Shatin, New Territories, Hong Kong.

FCC Accredited Lab (Designation Number: HK0004) ISED Wireless Test Site (ISED Assigned Code: 4093A)

## **TEST REPORT**

Report No. : AW0059539(9)

Date : August 30, 2018

1.5 Measurement Uncertainty

The reported uncertainty is based on a standard uncertainty multiplied by a coverage factor k=2, providing a level of confidence of approximately 95%.

### Radiated emissions

Frequency	Uncertainty (U <sub>lab</sub> )
30MHz ~ 200MHz (Horizontal)	4.59dB
30MHz ~ 200MHz (Vertical)	4.49dB
200MHz ~1000MHz (Horizontal)	4.94dB
200MHz ~1000MHz (Vertical)	4.97dB
1GHz ~ 6GHz	4.52dB
6GHz ~ 18GHz	4.58dB

### 1.6 Test Summary

TEST ITEM	FCC REFERANCE	<b>RSS REFERENCE</b>	RESULT	
Fundamental and harmonic	15 240(a) RSS-210,		Comply	
emission	13.249(a)	Annex B.10(a)		
Out hand amission	15.240(d)	15.249(d) RSS-210,		
Out-band emission	13.249(u)	Annex B.10(b)	Compry	
Peak Limit	15.249(e)	RSS-Gen, 8.1	Comply	
Bandwidth	15.215(c)	RSS-Gen, 6.7	Comply

# TEST REPORT

Report No. : AW0059539(9)

Date : August 30, 2018

### 2 Description of the radiated emission test

### 2.1 Test Procedure

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.10 - 2013.

A non-conductive turntable with dimensions of 1.5m x 0.4m x 0.8m (L x W x H) placed above the reference ground plane. The equipment under test (EUT) was placed at 0.8m height for below 1GHz measurement and 1.5m height for above 1GHz measurement. The test distance is 3m between EUT and receiving antenna. A broadband antenna mounting on the mast received the signal strength. The turntable was rotated to maximize the emission level. The antenna was moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated. Additional absorbing material will be placed between the EUT and receiving antenna for above 1GHz measurement.

For below 30MHz, a loop antenna with its vertical plane is placed 3m from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. And the centre of the loop shall be 1 m above the ground.

The device was rotated through three orthogonal axes to determine which attitude and configuration produce the highest emission during measurement.

# **TEST REPORT**

Report No. : AW0059539(9)

Date : August 30, 2018

2.3 Test Result

Peak Detector data was measured unless otherwise stated.

The radiated emissions are measured from 9kHz to 9GHz (the tenth harmonics)

The worst case configuration is shown on the worst case configuration of test setup photo.

The frequencies from fundamental up to tenth harmonics were investigated, and emissions more 20dB below limit were not reported. Thus, those highest emissions were presented in next pages.

The EUT has been tested in Transmission mode.

It was found that the EUT meet the FCC and RSS requirement.

#### 4.1 Bandwidth

Appendices A1 and A2 show the fundamental emission is confined in the specified band. 20dB bandwidth is 207.7kHz and 99% bandwidth is 222.9kHz. Both bandwidths fall in the band of 902 – 928MHz. It also shows that the EUT met the requirement of FCC Part 15.215(c) and RSS-GEN.
