TO WHOM IT MAY CONCERN

Dear Sir/Madam,

Herewith we declare that the modification, which we have performed in the composite device with FCC ID: KWCTX10 is affecting only the operation of the device at 2.4 GHz and this is why we have applied for a new Equipment Authorization under the FCC ID: KWCTX15. The difference between the modified composite device KWCTX15 and its predecessor KWCTX10 is only in the 2.4 GHz transmitter part. The TNT transmitter part from the composite device KWCTX15, which is operating at 216 MHz has not been modified and is electrically identical to the corresponding one certified under KWCTX10 as follows:

- Equipment Class TNT - Part 95 Licensed Non-Broadcast Transmitter Worn on Body certificated with Grant of Certification issued on June 25, 2009 (216.0125 – 216.9875 MHz).

In view of the above, the already submitted test reports and documents for the authorization of the TNT transmitter part of KWCTX10 are still representative and there is no new data such as radiated emissions, HAC, RF safety or EMC that needs to be reported. Therefore, it is also requested

that the grant conditions for the TNT transmitter as part of the composite equipment KWCTX15 remain the same as the corresponding ones for KWCTX10.

Should you have any questions or require additional information please do not hesitate to contact us.

Best regards,

Neviana Nikoloski
