Modification Letter

About the 17inch LCD ,(FCC ID KXYNV721C),Now we need three changes :

1. About the inverter ,we add T3 and T4, **diagram has not been changed ,and PCB layerout has no change,because the position for T3 and T4 were obligated**, last time we provide the one only omitting the T3 and T4 ,T3 and T4 are only used for sampling the output ,they get current sample from the output to the control IC ,when the current is too high ,the IC will stop working and the inverter will stop working ,and so they reduce the chance that attainting the inverter .
2. And about the enclosure , we have a new plastic enclosure for the 17inch LCD and add"F" at the type name NV721C for it , so it called NV721CF. So the 17inch type name will be NV721C;NV721CF .And except the plastic enclosure ,nothing change.
- 3.Add a new adapter:up05071120.
