

Transmitter labels. The warning statements may be placed in the manual for FCC if no space is available on the unit. In Canada, it is permitted to put the label in the manual or the unit as desired. For Canada, RSS 210 implies the trade name and model number should be on the unit also but RSP 100 only requires the IC number. I would put the Trade Name and Model No on the labels also, but strictly speaking it's not required. No other labelling for FCC is required since the transmitters do not contain digital circuitry that is not associated with the operation of the transmitter.

The label appears on the bottom of the unit.

FCC ID : KZ3050261
Certification No. IC : 2430A-050261
This device complies with FCC Part 15 and Industry Canada
RSS 210. Operation is subject to the following two
conditions: (1) this device may not cause interference,
and (2) this device must accept any interference, including
interference that may cause undesired
operation of the device.
