

Applicant: Delphi Delco Electronics Systems
Correspondence Reference Number: 28515
731 Confirmation Number: EA384397

The following is in response to the comments made on the above referenced application.

The new elevation plot indicates that the side lobe level at 30 degrees from horizontal was 17.5 dB down rather than 21 dB which used to determine the total emission level in Section 6.5 of the report. The correct total emission level is -68.3 dBm and so the device cannot be marketed or imported after 2010. The previous calculation limited marketing and importation until 2014.

Please verify because the grant will be conditioned accordingly.

Yes, we acknowledge the limitation on certification. The test report was corrected to reflect the marketing and import limit.
