

The 442-01 is a 433 MHz 3 button, multifunction, RF transmitter with a red LED operation indicator.

1. The red LED is an indicator that lights up every time any of the buttons are pressed.
2. Upon pressing any of the 3 buttons, three operations occur
 - a. Power from the 23A type battery is supplied to the encoder IC, and 433 MHz RF oscillator.
 - b. The command code for the button (On, Off, Trunk, Panic, and programming) inputted to the encoder IC.
 - c. The PWM signal is transmitted to the receiver at 433 MHz.
