

EMI Test Report

Research In Motion Limited

REPORT NO.: RIM-0206-03

PRODUCT Model No: R6220GW
Type Name : BlackBerry 6225 Wireless Handheld
FCC ID: L6AR6220GW
IC: 2503A-R6220GW

Approved by: _____ *Paul G. Cardinal* _____
Paul G. Cardinal, Ph.D.
Manager, Compliance and Certification

Date: _____ 24 June 2002 _____

Appendix 1 Conducted Emissions Test Data/Plots	
Appendix 2 Radiated Emissions Test Data/Plots	

A) Scope

This report details the results of compliance tests which were performed in accordance with the requirements of:

FCC CFR 47 Part 15, Subpart B, Class B Digital Devices, Unintentional Radiators

IC ICES-003, Class B Digital Devices, Unintentional Radiators

B) Product Identification

The equipment under test (EUT) was tested at the Research In Motion (RIM) EMI test facility, located at:

305 Phillip Street
Waterloo, Ontario
Canada, N2L 3W8
Phone: 519 888 7465
Fax: 519 888 6906
Web Site: www.rim.net

The testing began on June 20, 2002 and was completed on June 21, 2002. The sample equipment under test (EUT) included:

1. BlackBerry 6225 Wireless Handheld, model number R6220GW, PIN 2001B917, FCC ID L6AR6220GW, IC: 2503A-R6220GW.
2. USB data cable, model number HDW-04162-001, 1.5 metres long.
3. Travel Charger, model number PSM05R-050Q, RIM part number ASY-04078-001 with an output voltage of 5.0 volts dc.
4. Headset, model number HDW-03458-001

The transmit frequency ranges for the BlackBerry 6225 Wireless Handheld are: GSM band, 880 to 915MHz and PCS band, 1850 to 1910 MHz. Only the PCS band emissions were measured since the GSM band is not available in North America and therefore cannot be used.

C) Support Equipment Used for the Testing of the EUT

1. PC, Dell, model number MMP, serial number 6SPS20B
2. Monitor, KDS, model number KD-1460, serial number 4530019652
3. Printer, H/P, model number C5884A, serial number US8251W0VQ

D) Test Voltage

The ac input voltage was 120 volts, 60 Hz. This configuration was per manufacturer's specifications.

E) Test Results Chart

SPECIFICATION	Test Type	MEETS REQUIREMENTS	Performed By
FCC CFR 47 Part 15, Subpart B IC ICES-003	Class B	Yes	Masud Attayi

F) Modifications to EUT

No modifications were required on the EUT.

G) Summary of Results

1 CONDUCTED EMISSIONS

The conducted emissions were measured while using the test procedure outlined in CISPR Recommendation 22 through a 50 Ω Line Impedance Stabilization Network (LISN), which was inserted in the power line to the equipment to provide the specified impedance for measurements. The EUT was placed on a nonconductive wooden table, 80 cm high that was positioned 40 cm from a vertical ground plane. The RF output of the network was connected to a spectrum analyzer system with characteristics that duplicate those of the receiver specified in CISPR Publication 16. The following test configurations were measured:

- The Travel Charger was connected to the handheld. The ac input to the Travel Charger was 120 volts, 60 Hz.
- The handheld was connected to the support PC by the USB data cable. The ac input to the support PC was 120 volts, 60 Hz.

The sample EUT's conducted emissions were compared with respect to the FCC CFR 47 Part 15, Subpart B/IC ICES-003, Class B limit. The sample EUT had a worse case test margin of 16.68 dB at 0.450 MHz.

Measurement Uncertainty ± 2.0 dB

To view the test data/plots, see APPENDIX 1.

2 RADIATED EMISSIONS

The radiated emissions from the EUT were measured while using the methods outlined in CISPR Recommendation 22. The EUT was placed on a nonconductive wooden table, 80 cm high that was positioned on a remotely rotatable turntable. The test distance used between the EUT and the receiving antenna was three metres. The measurements were done in a semi-anechoic chamber. The semi-anechoic chamber FCC registration number is **778487** and the Industry Canada file number is **IC4240**. The turntable was rotated to determine the azimuth of the peak emissions. At this point the emissions were maximized by elevating the antenna in the range of 1 to 4 metres. The maximum emissions level was recorded. The frequency range measured was from 30 MHz to 9 GHz which is the 5th harmonic of the highest RF local oscillator (LO) in the PCS band. Both the horizontal and vertical polarizations of the emissions were measured:

The EUT was configured and operated to produce the maximum radiated emissions while still keeping within RIM's specifications. The following test configurations were measured:

- The handheld was connected to the Travel Charger.
- The handheld was connected to the PC via the USB data cable for charging and data link.

The system's radiated emission levels in idle mode were compared with respect to the FCC CFR 47 Part 15, Subpart B/IC ICES-003, Class B limit.

The system **passed** with a worse case emission test margin of 5.46 dB at 894.80 MHz.

The EUT's IF LO emissions were measured in the low channel and high channel up to the 5th harmonic with the handheld in idle mode connected to the travel charger and headset.

Both the horizontal and vertical polarizations of the emissions were measured. No harmonics of the IF LO were found.

The LO harmonic emissions were measured on the low, middle and high channels (512, 661 and 810) in the worse configuration of handheld connected to the travel charger and headset. Both the horizontal and vertical polarizations of the emissions were examined. The Los were measured up to the 5th harmonic. No harmonics of the RF LO were found.

Sample Calculation:

Field Strength (dB μ V/M) is calculated as follows:

$$FS = \text{Measured Level (dB}\mu\text{V)} + \text{A.F. (dB/m)} + \text{Cable Loss (dB)} - \text{preamp (dB)} + \text{filter loss (dB)}$$

Measurement Uncertainty ± 4.0 dB

To view the test data see APPENDIX 2.

K) Declaration**Statement of Performance:**

The test sample BlackBerry 6225 Wireless Handheld model R6220GW tested with the following accessories: Travel Charger model number PSM05R-050Q RIM part number ASY-04078-001, Headset model number HDW-03458-001 and USB data cable model number HDW-04162-001 when configured and operated per RIM's operation instructions, performs within the requirements of the test standards.

Declaration:

We hereby certify that:

The test data reported herein is an accurate record of the performance of the sample(s) tested.

The test equipment used was suitable for the tests performed and within manufacturer's published specifications.

The test equipment was used within its published operating parameters.

The test methods were consistent with the methods described in the relevant standards.

Tested by:

Masud S. Attayi, P.Eng.
Senior Engineer, Compliance and Certification

Date: 21 June 2002
