#### Conducted Emission Test Data cont'd

The conducted spurious emissions – Pursuant to 47 CFR 2.1051 were measured from 10 MHz to 10 GHz. No emissions could be seen above the noise floor of the spectrum analyzer.

Measurement Plots for TDMA, QPSK 4, QAM-16, QAM 64.

Refer to the following figures for the measurement plots.

See Figures 1 to 18 for the plots of the 99% Occupied Bandwidth results.

See Figures 19 to 36 for the plots of the –26 dBc Bandwidth results. Carrier Reference at 0.0 dB

See Figures 37 to 54 for plots of the EA Mask 47 CFR 90.691(a) measured data.

See Figures 55 to 72 for plots of the G Mask. 47 CFR 90.210(g) measured data.

See Figures 73 to 108 for plots of the Spurious Conducted Emission 47 CFR 2.1051 results.
