## **EMI Test Report**

For RBB10BW

Tested in accordance with Federal Communications Commission (FCC) Personal Communications Services CFR 47, Part 15 Subpart C

# **RIM Testing Services (RTS)**

**REPORT NO** RTS-0223-0508-04

**PRODUCT MODEL NO.**: RBB10BW

**TYPE NAME**: BlackBerry Smart Card Reader

FCC ID: L6ARBB10BW

**IC**: 2503A-RBB10BW

## **RIM Testing Services**

Report No. RTS-0223-0508-04

#### Declaration

#### **Statement of Performance:**

The BlackBerry Smart Card Reader, model RBB10BW ASY-09858-001 and accessories when configured and operated per RIM's operating instructions, performs within the requirements of the test standards.

#### **Declaration:**

We hereby certify that:

The test data reported herein is an accurate record of the performance of the sample(s) tested.

The test results are valid for the tested unit (s) only.

The test equipment used was suitable for the tests performed and within manufacturer's published specifications and operating parameters.

The test methods were consistent with the methods described in the relevant standards.

## **RTS**

#### **RIM Testing Services**

Report No. RTS-0223-0508-04

## A) Scope

This report details the results of compliance tests which were performed in accordance to the requirements of:

Test Date: July 21 to August 19, 2005

- o FCC CFR 15 Subpart C, Dec. 8, 2003
- O Industry Canada, RSS-210, Issue 5, Amendment 4 August 2004, Low Power Licence-Exempt Radiocommunication Devices

#### **B) Product Identification**

The equipment under test (EUT) was tested at the RIM Testing Services (RTS) EMI test facility, located at:

305 Phillip Street Waterloo, Ontario Canada, N2L 3W8

Phone: 519 888 7465 Fax: 519 888 6906

The testing began on July 21, 2005 and completed on August 19, 2005. The sample equipment under test (EUT) included:

- 1a) BlackBerry Smart Card Reader, model number RBB10BW, ASY-09858-001, sample #6, FCC ID L6ARBB10BW, IC: 2503A-RBB10BW.
- 1b) BlackBerry Smart Card Reader, model number RBB10BW, ASY-09858-001, sample #3, FCC ID L6ARBB10BW, IC: 2503A-RBB10BW.

The transmit frequency band for the BlackBerry Smart Card Reader is Bluetooth 2402 to 2480 MHz.

## **C) Associated Document**

1. Test report number RTS-0223-0508-03

This report shall <u>NOT</u> be reproduced except in full without the written consent of RIM Testing Services (RTS) A division of Research in Motion Limited.

### **RIM Testing Services**

Report No. RTS-0223-0508-04 Test Date: July 21 to August 19, 2005

## D) Support Equipment Used for the Testing of the EUT

- 1) Communication Tester, Rohde & Schwarz, model CMU 200, serial number 100251
- 2) Communication Tester, Rohde & Schwarz, model CMU 200, serial number 837493/073
- 3) DC Power Supply, H/P, model 6632B, serial number US37472178
- 4) Smart Card, Datakey 330

### E) Test Voltage

The ac input voltage was 120 volts, 60 Hz where applicable. This configuration was per RIM's specifications.

### F) Test Results Chart

SPECIFICATION	Test Type	MEETS REQUIREMENTS	Performed By
FCC CFR 47 Part 15.207 IC RSS-210	AC Conducted Emissions	See test report RTS-184-0507-03	-
FCC CFR 47 Part 15.209 IC RSS-210	Radiated Emissions	Yes	Masud Attayi
FCC CFR 47 Part 15.247(a), (b), and (c) IC RSS-210	20 dB Bandwidth Carrier Freq. Separation Number of Hopping freq. Dwell Time Max. Peak Output Power Band Edge Compliance Spurious RF Conducted Emissions	Yes	Maurice Battler

## G) Modifications to EUT

No modifications were required to the EUT.

This report shall <u>NOT</u> be reproduced except in full without the written consent of RIM Testing Services (RTS) A division of Research in Motion Limited.

Copyright 2004-2005 Page 6 of 38

## H) Summary of Results

#### 1) AC CONDUCTED EMISSIONS

The conducted emissions from the EUT were measured using the methods outlined in CISPR Recommendation 22.

Test Date: July 21 to August 19, 2005

To view the test results, see test report number RTS-0223-0508-03.

## 2) RADIATED EMISSIONS

The radiated emissions from the EUT were measured as per FCC Part 15.247 and IC RSS-210. The EUT was placed on a nonconductive styrofoam table, 100 cm high that was positioned on a remotely controlled turntable. The test distance used between the EUT and the receiving antenna was three metres. The turntable was rotated to determine the azimuth of the peak emissions. At this point the emissions were maximized by elevating the antenna in the range of 1 to 4 metres. The maximum emission level was recorded. The frequency range measured was from 30 MHz to 25.0 GHz. Both the horizontal and vertical polarisations of the emissions were measured.

The measurements were done in a semi-anechoic chamber. The semi-anechoic chamber's FCC registration number is **778487** and the Industry Canada file number is **IC4240**.

The EUT was configured and operated to produce the maximum radiated emissions while still keeping within RIM's specifications.

The BlackBerry Smart Card Reader was measured in standalone configuration with Bluetooth transmitting at low channel (0), middle channel (39) and high channel (78) and frequency hopping mode.

The system's radiated emission levels were compared with respect to the FCC CFR 47 Part 15, Subpart C, 15.247 and RSS-210.

The Bluetooth harmonics were investigated up to the 10th harmonic. The worst test margin measured was 16.02 dB below the peak limit at 4960.0 MHz.

The Band-Edge Compliance of RF Radiated Emissions met the requirements as per 15.209. See APPENDIX 1 for the test data.

#### **Sample Calculation:**

Field Strength (dBµV/M) is calculated as follows:

 $FS = Measured Level (dB\mu V) + A.F. (dB/m) + Cable Loss (dB) - Preamp (dB) + Filter Loss (dB)$ 

To view the test data see APPENDIX 1.

Measurement Uncertainty ±4.0 dB

Report No. RTS-0223-0508-04 Test Date: July 21 to August 19, 2005

#### 3) BLUETOOTH RF CONDUCTED EMISSIONS

#### a) 20 dB Bandwidth

The EUT met the requirements of the 20 dB bandwidth as per 47 CFR 15.247(a) and RSS-210. Low channel (0), middle channel (39) and high channel (78) were measured. See APPENDIX 2 for the test data.

#### b) Carrier Frequency Separation

The EUT met the requirements of the carrier frequency separation as per 47 CFR 15.247(a) and RSS-210. Channel 38 to 39 was measured. See APPENDIX 2 for the test data.

#### c) Number of Hopping Frequencies

The EUT met the requirements of the number of hopping frequencies as per 47 CFR 15.247(a) and RSS-210. The number of hopping channels measured was 79. See APPENDIX 2 for the test data.

#### d) Time of Occupancy (Dwell Time)

The EUT met the requirements of the dwell time as per 47 CFR 15.247(a) and RSS-210. Low channel (0), middle channel (39) and high channel (78) were measured in DH1, DH3 and DH5 modes. Bluetooth was operating in frequency hopping (Euro/US) mode during the measurements.

See APPENDIX 2 for the test data.

#### e) Maximum Peak Conducted Output Power

The EUT met the requirements of the maximum peak conducted output power as per 47 CFR 15.247(b) and RSS-210. Low channel (0), middle channel (39) and high channel (78) were measured.

See APPENDIX 2 for the test data.

#### f) Band-Edge Compliance of RF Conducted Emissions

The EUT met the requirements of the band-edge compliance of RF conducted emissions as per 47 CFR 15.247(c) and RSS-210. Channels 0 and 78 were measured in frequency hopping (Euro/US) mode and single frequency mode.

See APPENDIX 2 for the test data.

This report shall <u>NOT</u> be reproduced except in full without the written consent of RIM Testing Services (RTS) A division of Research in Motion Limited.

Copyright 2004-2005 Page 8 of 38

Report No. RTS-0223-0508-04 Test Date: July 21 to August 19, 2005

## g) Spurious RF Conducted Emissions

The EUT met the requirements of the spurious RF conducted emissions as per 47 CFR 15.247(c) and RSS-210. The frequency range measured was 10 MHz to 26 GHz. Low channel (0), middle channel (39) and high channel (78) were measured in single frequency mode and frequency hopping (Euro/US) mode. See APPENDIX 2 for the test data.

Test Date: July 21 to August 19, 2005

## RF Conducted Emission Test Results cont'd

#### 20 dB Bandwidth

The EUT met the requirements of the 20 dB bandwidth as per 47 CFR 15.247(a) and RSS-210. Low channel (0), middle channel (39) and high channel (78) were measured. Bluetooth was operating in single frequency mode using pattern type Static PRBS and packet type DH5 during the measurements.

Bluetooth Channel	Limit (MHz)	Measured Value (MHz)
0	<=1.0	0.900
39	<=1.0	0.920
78	<=1.0	0.943

See figures 1 to 3 for the plots of the 20 dB bandwidth measurements.

The environmental test conditions were: Temperature 24°C Pressure 1012 mb Relative Humidity 43%

## **Carrier Frequency Separation**

The EUT met the requirements of the Carrier Frequency Separation as per 47 CFR 15.247(a) and RSS-210. Channel 38 to 39 was measured. Bluetooth was operating in frequency hopping (Euro/US) mode using pattern type Static PRBS and packet type DH5 during the measurements.

Bluetooth Channels	Limit (MHz)	Measured Value (MHz)
38 to 39	>= 0.025 or 20 dB bandwidth	1.000

The environmental test conditions were: Temperature 24°C
Pressure 1012 mb
Relative Humidity 43%

#### **Number of Hopping Frequencies**

The EUT met the requirements of the number of hopping frequencies as per 47 CFR 15.247(a) and RSS-210.

Bluetooth was operating in frequency hopping (Euro/US) mode using pattern type Static PRBS and packet type DH5 during the measurements.

Limit (CH)	Number of Hopping Frequencies (CH)		
>= 75	79		

The environmental test conditions were: Temperature 24°C
Pressure 1012 mb

Relative Humidity 43%

See figures 5 to 8 for the plots of the number of hopping frequencies.

## RF Conducted Emission Test Results cont'd

## **Time of Occupancy (Dwell Time)**

The EUT met the requirements of the time of occupancy (dwell time) as per 47 CFR 15.247(a) and RSS-210. Low channel (0), middle channel (39) and high channel (78) were measured in packet types DH1, DH3 and DH5. Bluetooth was operating in frequency hopping (Euro/US) mode during the measurements.

The frequency hopping is 1600 hops per second for a dwell time of 625 µsec. for 79 channels. A DH1 packet needs one time slot for transmitting and one time slot for receiving. The frequency hopping is 800 hops per second with 79 channels which is 10.127 times per second. As per 15.247(a) (iii) "The average time of occupancy on any channel shall not be greater than 0.4 seconds within a period of 0.4 seconds multiplied by the number of hopping channels employed". Therefore for 31.6 seconds (79x0.4) there are 320.0 times of appearance.

A DH3 packet needs one time slot for transmitting and one time slot for receiving. The frequency hopping is 400 hops per second with 79 channels which is 5.06 times per second. Therefore for 31.6 seconds there are 159.9 times of appearance.

A DH5 packet needs one time slot for transmitting and one time slot for receiving. The frequency hopping is 266.7 hops per second with 79 channels which is 3.38 times per second. Therefore for 31.6 seconds there are 106.8 times of appearance.

Bluetooth Channel	Mode	Tx Time (ms)	Dwell Time/31.6 sec. (msec.)	Limit (msec.)	Margin (msec.)
0	DH1	0.4420	$.442 \times 320.0 = 141.4$	400	258.6
39	DH1	0.4507	$.4507 \times 320.0 = 144.2$	400	255.8
78	DH1	0.4420	$442 \times 320.0 = 141.4$	400	258.6
0	DH3	1.6987	$1.6987 \times 159.9 = 271.6$	400	128.4
39	DH3	1.7073	$1.7073 \times 159.9 = 273.0$	400	127.0
78	DH3	1.6987	$1.6987 \times 159.9 = 271.6$	400	128.4
0	DH5	2.9500	$2.95 \times 106.8 = 315.1$	400	84.9
39	DH5	2.9500	$2.95 \times 106.8 = 315.1$	400	84.9
78	DH5	2.9500	$2.95 \times 106.8 = 315.1$	400	84.9

The environmental test conditions were: Temperature 24°C
Pressure 1012 mb
Relative Humidity 43%

See figures 9 to 17 for the plots of the dwell time.

#### Maximum Peak Conducted Output Power

The EUT met the requirements of the maximum peak conducted output power of class 2 as per 47 CFR 15.247(b) and RSS-210. Low channel (0), middle channel (39) and high channel (78) were measured. Bluetooth was operating in single frequency mode during the measurements. A reference offset of 0.3 dB was applied to the spectrum analyzer reference level for the coaxial cable loss in the test circuit.

Bluetooth Channel	Measured Value (dBm)	Class 2 Limit (dBm)
0	3.00	-6.0 to 4.0
39	3.00	-6.0 to 4.0
78	2.50	-6.0 to 4.0

The environmental test conditions were: Temperature 24°C
Pressure 1012 mb
Relative Humidity 43%

See figures 18 to 20 for the plots of the maximum peak conducted output power.

#### **Band Edge Compliance**

The EUT met the requirements of the band edge compliance as per 47 CFR 15.247(c) and RSS-210. Low channel (0) and high channel (78) were measured. Bluetooth was operating in single frequency and hopping mode using pattern type Static PRBS and packet type DH5 during the measurements.

Bluetooth Channel	Operating Mode	Measured Value (dBc)	Limit (dBc)	Margin (dB)
0	Single Frequency	-30.50	-20	10.50
0 - 78	Hopping	-31.00	-20	11.00
78	Single Frequency	-30.67	-20	10.67
0 - 78	Hopping	-30.83	-20	10.83

The environmental test conditions were: Temperature 24°C
Pressure 1012 mb
Relative Humidity 43%

See figures 21 to 24 for the plots of the band edge compliance measurements.

## **Spurious RF Conducted Emissions**

The EUT met the requirements of the spurious RF conducted emissions as per 47 CFR 15.247(c) and RSS-210. Low channel (0) and high channel (78) were measured. Bluetooth was operating in single frequency mode using pattern type Static PRBS and packet type DH5 during the measurements. A reference offset of 32.9 dB was applied to the spectrum analyzer reference level for the attenuators and coaxial cable loss in the test circuit. No emissions could be seen above the noise floor (NF) of the spectrum analyzer.

Bluetooth Channel	Channel Power (dBm)	Max. Measured Value from dBc	Limit (dBc)
0	3.00	-41.17 (NF)	-20
39	3.00	-41.67 (NF)	-20
78	2.50	-41.50 (NF)	-20
Hopping mode	3.00	-41.33 (NF)	-20

The environmental test conditions were: Temperature 24°C
Pressure 1012 mb
Relative Humidity 43%

See figures 25 to 33 for the plots of the Spurious RF Conducted Emissions.
