**Subject: DFS Test plan modification for BlackBerry model RBG41GW, FCC ID L6ARBG40GW,
Dual-Mode Cellular Wi-Fi phone with no video streaming capabilities**

Research In Motion Limited would like to propose the following changes to the standard DFS test plan outlined in FCC-06-96

1. Sec. 7.7 Replace MPEG test file streaming between master and client with FTP, an alternative traffic generator that ensures real time continuous communication with the master.
2. Sec. 7.7.1 The FTP server will run on master for all test configurations.
3. Sec. 7.7.2 Start the FTP server on the master device, next start the FTP client on the UUT. The UUT will download the reference movie at a speed that ensures in excess of 13 minutes of constant channel load. Commands for the FTP server and client will be provided as part of the testing instructions for the UUT.

Yours Truly,

Charles Bishop
