**Overall Assessment Letter for RIM Blackberry Model RBY41GW
FCC id: L6ARBY40GW**

I have reviewed this application and find it compliant. This is an application for a handheld Blackberry which supports GSM/GPRS/EDGE 850/1900, 802.11a/b/g, Bluetooth and aGPS.

Since it also has an USB port for connection to Computers a filing for a Class B Computer peripheral has also been made.

Please note the following:

1: Spread Spectrum Declarations

The various declarations to meet the Spread Spectrum requirements are included in the Operating Description exhibit.

2: SAR

The product supports simultaneous transmission. Simultaneous transmission SAR was not required to be tested and approved and the test report was reviewed in accordance with KDB 447498 D01 Mobile Portable RF Exposure v03.

I underwent the FCC RF exposure evaluation training at BABT in July 2007.

3: GPS

This device contains a GPS receiver to support the FCC E911 requirement for caller location identification and operates at 1.575MHz. The user manual complies with Part 15 Clause 5.

As a result of the assessment review an updated HAC RF Emissions and T-Coil test reports were provided with administrative and regulatory-related amendments made related to test frequencies stated and inclusion of the interim conditional rule (June 20, 2008). The applicant has provided confirmation that the final user manual will be updated to disclose to the user that the handset has not been rated for hearing aid compatibility with respect to the Wi-Fi operational aspect.

Yours sincerely

Vina Kerai
