**Overall Assessment Letter for RIM Blackberry Model RCF71CW  
FCC id: L6ARCF70CW**

I have reviewed this application and find it compliant. This is an application for a handheld Blackberry which supports GSM/GPRS/EDGE 850/1900, CDMA 800/1900, Bluetooth and GPS.

Since it also has an USB port for connection to Computers a filing for a Class B Computer peripheral has also been made. The phone additionally supports GSM 900, DCS 1800 and WCDMA FDD 1 however are not relevant as they are not supported in North America.

Please note the following:

1: Spread Spectrum Declarations

The various declarations to meet the Spread Spectrum requirements are included in the Operating Description exhibit.

2: SAR

The product supports simultaneous transmission. Simultaneous transmission SAR was not required to be tested and approved and the test report was reviewed in accordance with KDB 648474 D01 SAR Handsets Multi Xmitter and Ant, v01r05.

I underwent the FCC RF exposure training at the FCC TCB Workshop in October 2008.

3: GPS

This device contains a GPS receiver to support the FCC E911 requirement for caller location identification and operates at 1.575MHz. The user manual complies with Part 15 Clause 5.

As a result of the assessment review, the SAR report was updated to include amendments to the FCC policy date, correction to SAR appendix for the test position stated and inclusion of number of slots which were transmitting for consistency. The HAC report was updated to correct report generation errors and the Part 15C report was amended to correct typographical errors related to results. The Part 22/24 report was updated to state compliance according to the latest FCC rules.

Yours sincerely
