Subject: FCC ID: L7APTA9012

Dear People:

My review of the application for FCC ID: L7APTT8012 indicates that there is important information missing, which must be supplied before the device can be certified. The FCC is presently auditing 20% of all TCB certifications, and it is setting aside those which are not correct. We want to avoid such a set aside, which would delay the client's marketing of his product. The following items need to be addressed:

1) The operational description supplied is really an installation instruction. It does not describe how the circuit operates, or how the signals are modulated or produced. Please provide a simple technical document which relates to the block diagram. It should also describe the antenna, which does not appear in the product external photos.

The instruction manual describes an RF transmitter and a separate receiver for relaying PC screen images to a remote TV set. However, the setup photos - especially RE-2 - appear to show the transmitter directly connected to both the PC and the TV. How is that possible?

2) The test report does not describe any of the EUT settings or input signals during testing. What signals were used during testing? Did the laptop computer have "scrolling H's" on the screen? Please provide this information in the test report or an addendum.

3) The external photo Outlook2 does not show a permanently attached antenna on the antenna port. According to 15.203, a permanently attached antenna must be provided, unless it has a "unique" connector or the device is professionally installed. Please provide a new photo showing the permanently attached antenna. If the antenna uses a "unique" connector, more information about the connector is needed.

4) The FCC ID: label drawing label.pdf does not show the required label wording under 15.19(a)(3). It only shows the FCC ID. Please provide a new label drawing with all of the required wording.

As soon as this information is supplied, the product can be certified.

Regards,
Roland

Dear Roland:

About our client apply for the FCC certificate, according to your previous mail,
it will be certificated on March 2. Is this project approved already?
And when will the Certificate be received? Pls kindly inform us.

Best Regards
Lyn Yang

Subject: RE: Applying FCC ID for Further-documents

Dear Tulip:

Thank you for this application. Please note that the following files, appearing in the "list.pdf" document, were not included in the February 8, 2001 email to us:

Exhibit type	Filename
Test setup photo	CE.pdf
Test setup photo	RE-intentional.pdf
Test setup photo	RE1-unintentional.pdf
Test setup photo	RE2-unintentional.pdf
External photo	outlook1.pdf
External photo	outlook2.pdf

Also please note that the Bandwidth plot, listed as an External Photo exhibit type (should be Test report exhibit type), is missing.

I would like to promise certification by the end of February, but the soonest realistic date is March 2, 2001 if we receive all of the missing files. I hope that is acceptable.

Regards,
Roland

¥D|®: RE: Applying FCC ID for Further-documents

Greetings,

My name is Kathy Alberts, and I work in the Cortland office. I am responding to the TCB correspondence while Roland is away this week. If he is able, due to his travels, he shall be checking his messages very soon. I shall make sure he is aware of this message upon his return.

Best Regards,

Kathy Alberts
