Subject: Metrosite Edge

Hi Chris

After discussions with the project team, suppliers and installers - I can confirm that the following wording will be in the installation manual and the user manual

"IMPORTANT NOTE:

To comply with the FCC RF Exposure compliance requirements, the following indoor antenna installation and device operating configurations must be satisfied - Any indoor located antenna connected to this device must result in an ERP < 3.0W and must be mounted such that there is at least 20 centimeter spacing from the antenna structure and a human body."

Please inform me if there are any more open issues, and thanks for your time and patients over this issue.

Cheers
Andy
