Regarding: FCC ID:L82-1408

Dear Sir or Madam:

Siemens herewith files an application for Equipment Authorization for a spread spectrum cordless telephone system. Information has been filed for two styles of handsets and a base unit. Models submitted in this application at this time are identified as Gigaset 4000, Gigaset 4010 and Gigaset 4200 consisting of two handsets and one base unit. Technical information for additional base unit models will be submitted to cover three additional units if it becomes available before the grant is issued for the current equipment. If the grant has been issued before the technical information becomes available, a request for a Class II permissive change will be filed to cover the additional base units under the same FCCID.

Although the radiated power from the handsets is very low due to the duty cycle of transmission, RF exposure information will be filed for the handsets in approximately two to three weeks.

Sincerely,

Phillip Inglis
Consultant
