FCC ID: L9G646100SP-VT

Technical Description:

The brief circuit description is listed as follows:

- BF2520 and associated circuit act as Filter.
- RTC6701 and associated circuit act as Modulator and Frequency Mixer.
- VC0702NJSD and associated circuit act as Video Encoder.
- VA6251 and associated circuit act as Digital Image Sensor.
- AT24C16 and associated circuit act as EEPROM.

Type of Modulation:

Frequency Modulation (FM)

Antenna Used:

An internal integral antenna has been used.

RTC6701 CMOS 2.4GHz FM/FSK Transmitter

Product Description

The RTC6701 is a FM/FSK transmitter intended for application on 2.4GHz ISM band analog FM or digital FSK transmission. The chip includes a RF modulator, two channels of audio modulator and a power amplifier with up to +11.5dBm power output. The RF modulator block, which is frequency-synthesizer based with an integrated 2.4GHz VCO, generates the 2.4GHz FM signal modulated from stereo audio L(left)/R(left) signals. On-chip two audio modulators with stereo audio input signals provide the FM audio modulated signal at 6 MHz and 6.5MHz, respectively. Monaural application is also possible by turning off one of two audio modulators.

Transmission frequency can be set by internal register via SPI programming, or by selecting among 4 fixed channels using three dedicated pins. Output power of 1.5 Bm or +11.5 dBm can be configured via pins 28 and 29 to fit CE/FCC requirement earns. The device is available in a 32-pin QFN package.

Features

- 3.3V power supply
- 2.4GHz ISM band FM modulator
- FM/FSK transmitter operation
- Simple three digital pins setting a xed channels to eliminate external micro-controller
- Output Power +1.5dBm or + DadBm, selected by pin connection
- FM sound carriers at 6 and 5.5MHz
- CMOS technology
- On-chip VCO and PL
- Transmitter frequency programmability by SPI
- 32-pin leadles QFN package

Application

- AV Sender
- FSK transmitter
- Baby Monitor
- Wireless Camera
- Wireless Audio
- Wireless Earphone

Pin Descriptions

	rescriptions		
PIN	NAME	I/O	FUNCTION
1	VCOVDD	Supply In	VDD for VCO ¹
2	VT	Analog In	Vtune for VCO
3	GND	Analog GND	Analog GND
4	CP	Analog Out	Synthesizer charge pump output
5	AVT2	Analog In	Vtune for audio 2 PLL
6	ACP2	Analog Out	Charge pump for audio 2
7	AOUT2	Analog Out	FM modulated audio 2 output
8	AVDD2	Supply In	3.3V power supply for audio 2 modulator
9	AOUT1	Analog Out	FM modulated audio 1 output
10	NC	NC	NC \\\ \\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\
11	AVT1	Analog In	Vtune for audio 1 PLL
12	ACP1	Analog Out	Charge pump for audio 1
13	AVDD1	Supply In	3.3V power supply for audio 1 produtator
14	VDD	Supply In	3.3V Digital DC power supply
15	SPI_SE	Digital In	Switch mode or SPI selection (Internal pull high)
16	BCR	Analog I/O	Reference current by connecting 10k resistor
17	REG1D8	Analog Out	Regulator OUT 1.8 regulator output
18	PD_REG1D8	Digital In	Power down for V regulator 1: Power Down 9: Power On
19	XTAL1	Analog I/O	Crystal compection
20	XTAL2	Analog I/O	Crystal connection
21	VDD33	Supply In	3.3 DC power supply for digital circuits
22	CS0	Digital In	Easy channel selection ² (Internal pull high)
22	SPICLK	Digital In	SP bus clock input
22	CS1	Digital In	Easy Channel selection ² (Internal pull high)
23	SPILE	Digital Ia	SPI bus latch enable input
24	CS2	Digitation	Easy Channel selection ² (Internal pull high)
24	SPIDATA	Digital in	SPI bus data input
25	BX	ADEital In	Alternative band selection ² (Internal pull high)
26	SYNVSS 🙏	Digital GND	Digital GND for synthesizer
27	RFGND2	Analog GND	RF GND
28	PAOUT2	Analog Out	Connect with PAOUT1 for +12dBm output
29	PAOUT1	Analog Out	PA output for 0dBm
30	RFGND1	Analog GND	RF GND
31	PAVDD	Supply In	3.3V VDD for PA ESD
32	NC	NC	NC
	3 37 5	to the second and second	

Note 1. Connect to 3.3V supply through a resistor. Nominal voltage at this pin=2.5V.

Note 2. Digital pins (15, 22, 23, 24, 25) with internal pull-high circuits can be left floating for logical high.

ELECTRICAL SPECIFICATIONS

(1) Absolute Maximum Ratings

SYMBOL	PARAMETER	Ratings	UNIT
Tstr	Storage Temperature Range	-65 to +150	°C
Totr	Operating Temperature Range	-40 to +85	°C
Vdd	Supply Voltage	-0.5 to +5	V
Vlog	Logic control signal	-0.5 to +5	V

The maximum rating must not be exceeded at any time. Do not operate the device under conditions outside the above ratings.

(2) DC Electrical Characteristics

SYMBOL	PARAMETER	CONDITION	MIN.	TYP	MAX.	UNIT
Tj	Temperature Range	-	-40	A25 V	85	°C

Channel Selection

There are two principle modes for channel selection.

SPI_SE (Pin 7)	High	Low
Mode	SPI Mode	Easy Channel Selection Mode

(1) Easy channel selection mode

When pin 15 (SPI_SE) is set at low (0V), the chip operates in easy channel selection mode. Operation frequency can be selected by the pins 25(BX), 24(CS2), 23(CS1) and 22(CS0). The selected channel frequencies are listed in the table below.

BX=0

Pin25 (BX) is pulled to low for normal ISM band, and operation frequency table show as following Table.

BX	SPI SE		Pin22/Pin/23/ CS0/CSA/C	Pin24 282	
		011	(1997) Y	110	111
0	0	2414MHz	02432MHz	2450MHz	2468MHz

BX=1

Reserved for alternative band selection

(2) SPI mode

When pin 15 (SPI_SE) is set at high (3.5V), the chip works as in the SPI mode and the pins 24(SPIDATA), 23(SPILE) and 32(SPICLK) are used for 'SPI' inputs for 3-wire programming interface. The BX is "don't care"

SPI REGISTER DEFINITION

Address 00: Synthesizer Register A

A A 47						7																		
Bits	23		21	20_	10	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	-	0

PIN		R13				R9	R8	R7	R6	R5	R4		R2	R1	R0	A6	A5	A4	A3	A2	A1	A0		
Default	0	0	0	0 '	0	0	1	1	0	0	1	0	0	0	0	0	1]	1	1	0	0	0	0

Syn_RF_R_Reg: R counter divider ratio control register [14:0] Syn_RF_A_Reg: A counter divider ratio control register [6:0]

R14=MSB, R0=LSB

For integer N Synthesizer, the RF LO frequency is calculated by $(N*64+A)*f_{ref}/R$, where f_{ref} is the frequency of external reference oscillator (8 MHz). Ex for channel 1 operation (f = 2414MHz)

Default: R=400; N=1885; A=60 2414MHz=(1885*64+60)*8MHz/400
