

Tune-up procedure

FCC ID: L9N-7880

The power range:

Max. 0.7 Watt, Min. 0.5 Watt

At specific operating power level can't be controlled by the End-User. The manufacturer will set the specified fixed power level (0.7Watt~0.5Watt) to the customer on the specified application.

The module include the *CC1020* transceiver chip and power amp IC with the necessary external components for operation.

The PA2460 (U2) is a power amplifier IC (Gain 30dB) as the final RF amplifier in the 400MHz to 480MHz band.

The power level is controlled by the software and adjusted *CC1020* transceiver output power.
