

## THE SUMMARY OF DIFFERENCES BETWEEN THE OLD TEST REPORT AND THE UPDATED TEST REPORT.

Based on the question from the FCC we updated our test report to make it clearer.

The following changes were made:

1. Additional information in the updated report:
  - P. 12: The equation of converting MPE measured as the field strength into the MPE in power density units.
  - P. 13: Explanation of possibility to have 30-min averaging time for the EMR-200
  - P. 13: A new paragraph 4.3: Justification of use of the EMR-200 for MPE test with Yagi antenna
  - Section 5.4: MPE values in the entire section are given not only in "V/m" units, but also in "mW/cm<sup>2</sup>"
  - Section 6: Recommended statement for the EUT manual was changed
2. Section 5.5 of the old report was not included in the updated report, as the FCC does not require the results of these measurements.
