Columbia MD 21046

Subject: FCC ID: LDK102059

To Whom It May Concern:

Cisco Systems would like to request that the current application filed under FCC ID: LDK102059 be granted with two modes of operation as described below:

Mode 1

Running in stand-alone "autonomous" mode, where each access point runs independently. In this mode, DFS is supported as well as the channels in the 5470-5725MHz band.

Mode 2

Running in managed "Light Weight Access Point Protocol (LWAPP)" mode, where a group of access points are managed by a central switch. In this mode, DFS is not supported at this time, and the channels in the 5470-5725MHz band are disabled. Both DFS and the 5470-5725MHz band will be supported in this mode by the July, 2007 deadline.

In both modes, the DFS mechanism is controlled in the access point's IOS software image.

Best Regards,
