

# Cisco Aironet Omnidirectional Mast Mount Antenna (AIR-ANT2506)

## Overview

This document outlines the specifications, describes the omnidirectional mast mount antenna, and provides instructions for mounting it. Designed for WLAN applications in the 2.4- to 2.5-GHz frequency range, the antenna has a nominal gain of 5.2 dBi and is typically mounted indoors or outdoors on a mast. The antenna is compatible with Cisco Aironet radio products utilizing a reverse-polarity Threaded Neil Concelman connector (RP-TNC).

## Technical Specifications

Antenna type	Dipole	
Operating frequency range	2.4- to 2.84-GHz	
Environment	Indoor/outdoor	
VSWR	Less than 2:1, 1.5:1 nominal	
Gain	5.2 dBi	
Polarization	Linear, vertical	
E-Plane (3dB bandwidth)	Omnidirectional	
H-Plane (3dB bandwidth)	40 degrees	
Cable length and type	3 ft. (0.91 m) Plenum rated RG-58	
Dimensions (H x W)	11.5 in x 1.125 in. (29.2 cm x 2.8 cm)	
Mounting	Mast	

**Corporate Headquarters:**  
**Cisco Systems, Inc., 170 West Tasman Drive, San Jose, CA 95134-1706 USA**

**E-Plane Pattern****H-Plane Pattern**

## System Requirements

This antenna is compatible with any 2.4-GHz Cisco Aironet radio device that utilizes a RP-TNC connector.

## Installation Notes

### General Installation Instructions for Mast Mounted Antennas

The following instructions are common to most mast mounted installations.

1. Assemble your new antenna on the ground at the installation site.
2. Attach the antenna to the mast and connect its coaxial cable while you are on the ground.
3. Make sure the mast doesn't fall the "wrong way" should you lose control as you raise or take down the mast. Use a durable non-conductive rope secured at each two foot level as the mast is raised. Have an assistant tend the rope, ready to pull the mast clear of any hazards (such as power lines) should it begin to fall.
4. Use the mounting bracket provided with the antenna.
5. If the installation will use guy wires:
  - a. Install guy anchor bolts.
  - b. Estimate the length of guy wire and cut it before raising the mast.
  - c. Attach guy wires to a mast using guy rings.
6. Carefully connect the antenna and mast assembly to its mounting bracket and tighten the clamp bolts.

- a. In the case of a guyed installation, you must have at least one assistant to hold the mast upright while the guy wires are attached and tightened to the anchor bolts.
7. Attach the provided self-adhering “DANGER” label at eye level on the mast.
8. Install ground rods to remove any static electricity buildup and connect a ground wire to the mast and ground rod. Use ground rods designed for that purpose, not a spare piece of pipe.

## Grounding the Antenna

Follow these guidelines to ground the antenna in accordance with national electrical code instructions.

1. Use No. 10 AWG copper or No. 8 or larger copper-clad steel or bronze wire as ground wires for both mast and lead-in. Securely clamp the wire to the bottom of the mast.
2. Secure the lead-in wire to a lightning arrestor and mast ground wire to the building with stand-off insulators spaced from 4 feet (1.2 meters) to 8 feet (1.8 meters) apart.
3. Mount the lightning arrestor as close as possible to where the lead-in wire enters the building.
4. Drill a hole in the building’s wall as close as possible to the equipment to which you will connect the lead-in cable.

### Caution

---

There may be wires in the wall. Make sure you determine the place you intend to drill the hole is clear of any any obstructions or other hazards.

---

5. Pull the cable through the hole and form a drip loop close to where it enters the building.
6. Thoroughly waterproof the lead-in area.
7. Install a static electricity discharge unit.
8. Connect the lead-in cable to the equipment.

## Choosing a Mounting Location

The location of the antenna is important. Objects such as metal columns, walls, etc. will reduce efficiency. Best performance is achieved when transmit and receive antennas are mounted at the same height and in a direct line of sight with no obstructions. If this is not possible and reception is poor, you should try different mounting positions to optimize reception.

The antenna is designed to create an omni-directional broadcast pattern. To achieve this pattern, the antenna should be mounted clear of any obstructions to the sides of the radiating element. If the mounting location is on the side of a building or tower, the antenna pattern will be degraded on the building or tower side.

## Site Selection

Before attempting to install your antenna, think where you can best place the antenna for safety and performance.

Follow these steps to determine a safe distance from wires, power lines, and trees.

- 
- Step 1** Measure the height of your antenna.
- Step 2** Add this length to the length of your tower or mast and then double this total for the minimum recommended safe distance.

**Caution**

If you are unable to maintain this safe distance, stop and get professional help.

---

Generally, the higher your antenna is above the ground, the better it performs. Good practice is to install your antenna about 5 to 10 feet (1.5 to 3 meters) above the roof line and away from all power lines and obstructions. If possible, find a mounting place directly above your wireless device so that the lead-in cable can be as direct as possible.

## Tools and Equipment Required

To install the antenna, you will need the following tools and equipment.

- A standard screwdriver
- A standard hose clamp (shipped with your antenna)

**Note**

This list does not include the tools and equipment required to assemble and erect the tower, mast, or other structure you intend to mount your antenna on.

---

The following sections contain procedures for installing the antenna. Choose the procedure that applies to your situation. Use figure 1 as a guide.

## Mounting the Antenna

The antenna is provided with a mounting kit consisting of a mounting bracket and hose clamp. This kit allows you to mount the antenna to masts from 1.25 inches (3.2 centimeters) to 2 inches (5.1 centimeters). Cisco recommends that a 1.5 inch (3.8 centimeter) or larger tubing mast be used.

The antenna is vertically polarized. Since the antenna has vertical gain, it is very important to mount the antenna in a vertical (not leaning) position for optimal performance.

Follow these steps to mount the antenna on a mast.

- 
- Step 1** Position the antenna, mounting bracket, and hose clamp on the mast as shown in figure 1.

**Figure 1 Antenna Mounting Details**

<b>1</b>	Antenna	<b>2</b>	Mounting bracket
<b>3</b>	Hose clamp	<b>4</b>	Mast

- Step 2** Align the antenna so that the metal base is even with or above the top of the mast tubing.
- Step 3** Tighten the hose clamp until the antenna is secure on the mast.
- Step 4** Connect the antenna coaxial cable to the lead-in cable.
- Step 5** If the installation is outdoors, weatherproof the antenna connection.

**Note** The antenna is **not** DC grounded. It is recommended that you install lightning-protection devices in your system. See *Installation Instructions for Cisco Aironet Lightning Arrestors*. This document is available on the World Wide Web at the following URL:

[http://www.cisco.com/univercd/cc/td/doc/product/wireless/aironet/miscell/ltnng\\_arr.htm](http://www.cisco.com/univercd/cc/td/doc/product/wireless/aironet/miscell/ltnng_arr.htm)

## Suggested Cable

Cisco recommends a high-quality, low-loss cable for use with the antenna.

**Note** The higher the frequency, the higher the loss through the cable. Also, the longer the run, the higher the loss.

The antenna terminates with a special connector (reverse-TNC plug) after a short, 3-ft. (91.4 cm) cable. The mating connector to the antenna is an appropriate reverse-TNC jack connector. The connector on the opposite end will vary according to the type of equipment used.

After the cable is attached to the antenna, make sure that the connections are sealed (if using outdoors) to prevent moisture and other weathering elements from affecting performance.

---

**Note** The holes on the bottom of the antenna at the base (where the cable exits the antenna) should not be covered. These holes allow the antenna to vent any internal condensation.

---

Cisco recommends using a coax seal (such as CoaxSeal) for outdoor connections. Silicon sealant or electrical tape are **not** recommended for sealing outdoor connections.

## Safety Precautions

### Warning

---

**Installation of this antenna near power lines is dangerous. For your safety, follow the installation directions.**

---

Each year hundreds of people are killed or injured when attempting to install an antenna. In many of these cases, the victim was aware of the danger of electrocution, but did not take adequate steps to avoid the hazard.

For your safety, and to help you achieve a good installation, please read and follow these safety precautions. **They may save your life!**

1. If you are installing an antenna for the first time, for your own safety as well as others, seek professional assistance. Your Cisco sales representative can explain which mounting method to use for the size and type antenna you are about to install.
2. Select your installation site with safety, as well as performance in mind. Remember: electric power lines and phone lines look alike. For your safety, assume that any overhead line can kill you.
3. Call your electric power company. Tell them your plans and ask them to come look at your proposed installation. This is a small inconvenience considering your life is at stake.
4. Plan your installation carefully and completely before you begin. Successful raising of a mast or tower is largely a matter of coordination. Each person should be assigned to a specific task, and should know what to do and when to do it. One person should be in charge of the operation to issue instructions and watch for signs of trouble.
5. When installing your antenna, remember:
  - a. **Do not** use a metal ladder.
  - b. **Do not** work on a wet or windy day.
  - c. **Do** dress properly—shoes with rubber soles and heels, rubber gloves, long sleeved shirt or jacket.
6. If the assembly starts to drop, get away from it and let it fall. Remember, the antenna, mast, cable, and metal guy wires are all excellent conductors of electrical current. Even the slightest touch of any of these parts to a power line complete an electrical path through the antenna and the installer: **you!**
7. If any part of the antenna system should come in contact with a power line, **don't touch it or try to remove it yourself. Call your local power company.** They will remove it safely.
8. If an accident should occur with the power lines call for qualified emergency help immediately.

# Obtaining Technical Assistance

Cisco provides Cisco.com as a starting point for all technical assistance. Customers and partners can obtain documentation, troubleshooting tips, and sample configurations from online tools by using the Cisco Technical Assistance Center (TAC) Web Site. Cisco.com registered users have complete access to the technical support resources on the Cisco TAC Web Site.

## Cisco.com

Cisco.com is the foundation of a suite of interactive, networked services that provides immediate, open access to Cisco information, networking solutions, services, programs, and resources at any time, from anywhere in the world.

Cisco.com is a highly integrated Internet application and a powerful, easy-to-use tool that provides a broad range of features and services to help you to

- Streamline business processes and improve productivity
- Resolve technical issues with online support
- Download and test software packages
- Order Cisco learning materials and merchandise
- Register for online skill assessment, training, and certification programs

You can self-register on Cisco.com to obtain customized information and service. To access Cisco.com, go to the following URL:

<http://www.cisco.com>

## Technical Assistance Center

The Cisco TAC is available to all customers who need technical assistance with a Cisco product, technology, or solution. Two types of support are available through the Cisco TAC: the Cisco TAC Web Site and the Cisco TAC Escalation Center.

Inquiries to Cisco TAC are categorized according to the urgency of the issue:

- Priority level 4 (P4)—You need information or assistance concerning Cisco product capabilities, product installation, or basic product configuration.
- Priority level 3 (P3)—Your network performance is degraded. Network functionality is noticeably impaired, but most business operations continue.
- Priority level 2 (P2)—Your production network is severely degraded, affecting significant aspects of business operations. No workaround is available.
- Priority level 1 (P1)—Your production network is down, and a critical impact to business operations will occur if service is not restored quickly. No workaround is available.

Which Cisco TAC resource you choose is based on the priority of the problem and the conditions of service contracts, when applicable.

## Cisco TAC Web Site

The Cisco TAC Web Site allows you to resolve P3 and P4 issues yourself, saving both cost and time. The site provides around-the-clock access to online tools, knowledge bases, and software. To access the Cisco TAC Web Site, go to the following URL:

<http://www.cisco.com/tac>

All customers, partners, and resellers who have a valid Cisco services contract have complete access to the technical support resources on the Cisco TAC Web Site. The Cisco TAC Web Site requires a Cisco.com login ID and password. If you have a valid service contract but do not have a login ID or password, go to the following URL to register:

<http://www.cisco.com/register/>

If you cannot resolve your technical issues by using the Cisco TAC Web Site, and you are a Cisco.com registered, you can open a case online by using the TAC Case Open tool at the following URL:

<http://www.cisco.com/tac/caseopen>

If you have Internet access, it is recommended that you open P3 and P4 cases through the Cisco TAC Web Site.

## Cisco TAC Escalation Center

The Cisco TAC Escalation Center addresses issues that are classified as priority level 1 or priority level 2; these classifications are assigned when severe network degradation significantly impacts business operations. When you contact the TAC Escalation Center with a P1 or P2 problem, a Cisco TAC engineer will automatically open a case.

To obtain a directory of toll-free Cisco TAC telephone numbers for your country, go to the following URL:

<http://www.cisco.com/warp/public/687/Directory/DirTAC.shtml>

Before calling, please check with your network operations center to determine the level of Cisco support services to which your company is entitled; for example, SMARTnet, SMARTnet Onsite, or Network Supported Accounts (NSA). In addition, please have available your service agreement number and your product serial number.
