**Section 1: Overview**

The samples were assessed against the tests under the requirements of the following specifications:

| <b>Emission</b>  |
|--|
| CFR47 Part 15.247<br>RSS-247 Issue 2: February 2017<br>RSS-Gen Issue 4: Nov 2014 |

Measurements were made in accordance with

- ANSI C63.10:2013
- FCC KDB 662911 D01 v02r01
- KDB 558074 D01 Meas Guidance v03r05

## Section 2: Assessment Information

### 2.1 General

This report contains an assessment of an apparatus against Electromagnetic Compatibility Standards based upon tests carried out on the samples submitted. The testing was performed by and for the use of Cisco systems Inc:

With regard to this assessment, the following points should be noted:

- a) The results contained in this report relate only to the items tested and were obtained in the period between the date of the initial assessment and the date of issue of the report. Manufactured products will not necessarily give identical results due to production and measurement tolerances.
- b) The apparatus was set up and exercised using the configuration and modes of operation defined in this report only.
- c) Where relevant, the apparatus was only assessed using the susceptibility criteria defined in this report and the Test Assessment Plan (TAP).
- d) All testing was performed under the following environmental conditions:  
Temperature            15°C to 35°C (54°F to 95°F)  
Atmospheric Pressure   860mbar to 1060mbar (25.4" to 31.3")  
Humidity                10% to 75\*%  
  
\*[Where applicable] For ESD testing the humidity limits used were 30% to 60% and for EFT/B tests the humidity limits used were 25% to 75%.
- e) All AC testing was performed at one or more of the following supply voltages:  
110V 60 Hz (+/-20%)

### Units of Measurement

The units of measurements defined in the appendices are reported in specific terms, which are test dependent. Where radiated measurements are concerned these are defined at a particular distance. Basic voltage measurements are defined in units of [dBuV]

As an example, the basic calculation for all measurements is as follows:

$$\text{Emission level [dBuV]} = \text{Indicated voltage level [dBuV]} + \text{Cable Loss [dB]} + \text{Other correction factors [dB]}$$

The combinations of correction factors are dependent upon the exact test configurations [see test equipment lists for further details] and may include:-

Antenna Factors, Pre Amplifier Gain, LISN Loss, Pulse Limiter Loss and Filter Insertion Loss..

Note: to convert the results from dBuV/m to uV/m use the following formula:-

$$\text{Level in uV/m} = \text{Common Antilogarithm} [(X \text{ dBuV/m})/20] = Y \text{ uV/m}$$

## Measurement Uncertainty Values

|                                   |                        |
|-----------------------------------|------------------------|
| voltage and power measurements    | ± 2 dB                 |
| conducted EIRP measurements       | ± 1.4 dB               |
| radiated measurements             | ± 3.2 dB               |
| frequency measurements            | ± 2.4 10 <sup>-7</sup> |
| temperature measurements          | ± 0.54°                |
| humidity measurements             | ± 2.3%                 |
| DC and low frequency measurements | ± 2.5%                 |

Where relevant measurement uncertainty levels have been estimated for tests performed on the apparatus. This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

Radiated emissions (expanded uncertainty, confidence interval 95%)

|                    |            |
|--------------------|------------|
| 30 MHz - 300 MHz   | +/- 3.8 dB |
| 300 MHz - 1000 MHz | +/- 4.3 dB |
| 1 GHz - 10 GHz     | +/- 4.0 dB |
| 10 GHz - 18GHz     | +/- 8.2 dB |
| 18GHz - 26.5GHz    | +/- 4.1 dB |
| 26.5GHz - 40GHz    | +/- 3.9 dB |

Conducted emissions (expanded uncertainty, confidence interval 95%)

|                |             |
|----------------|-------------|
| 30 MHz – 40GHz | +/- 0.38 dB |
|----------------|-------------|

A product is considered to comply with a requirement if the nominal measured value is below the limit line. The product is considered to not be in compliance in case the nominal measured value is above the limit line.

**This report must not be reproduced except in full, without written approval of Cisco Systems.**

**2.2 Date of testing**

16-Dec-16 - 06-Feb-17

**2.3 Report Issue Date**

06-Feb-17

Cisco uses an electronic system to issue, store and control the revision of test reports. This system is called the Engineering Document Control System (EDCS). The actual report issue date is embedded into the original file on EDCS. Any copies of this report, either electronic or paper, that are not on EDCS must be considered uncontrolled.

**2.4 Testing facilities**

This assessment was performed by:

**Testing Laboratory**

## 2.6 EUT Description

The Cisco Aironet 802.11ac Dual Band Access Points support the following modes of operation. The modes are further defined in the radio Theory of Operation. The modes included in this report represent the worst case data for all modes. Data is recorded at the lowest supported data rate for each mode. This report covers operation on channel 1-11.

802.11b - Legacy CCK, One Antenna, 1 to 11 Mbps

802.11b - Legacy CCK, Two Antennas, 1 to 11 Mbps

802.11g - Non HT20, One Antenna, 6 to 54 Mbps, 1ss

802.11g - Non HT20, Two Antennas, 6 to 54 Mbps, 1ss

802.11g - Non HT20 Beam Forming, Two Antennas, 6 to 54 Mbps, 1ss

802.11n/ac - HT/VHT20, One Antenna, M0 to M7, 1ss

802.11n/ac - HT/VHT20, Two Antennas, M0 to M7, 1ss

802.11n/ac - HT/VHT20, Two Antennas, M8 to M15, 2ss

802.11n/ac - HT/VHT20 Beam Forming, Two Antennas, M0 to M7, 1ss

802.11n/ac - HT/VHT20 Beam Forming, Two Antennas, M8 to M15, 2ss

802.11n/ac - HT/VHT20 STBC, Two Antennas, M0 to M7, 2ss

The following antennas are supported by this product series.

The data included in this report represent the worst case data for all antennas.

| Frequency | Part Number | Antenna Type | Antenna Gain (dBi) | >30 degree 5 GHz Antenna Gain (dBi) |
|-----------|-------------|--------------|--------------------|-------------------------------------|
| 2.4/5 GHz | Internal    | BT/BLE       | 2 / NA             | NA                                  |
|           | Internal    | HP Omni      | 2 / 4              | NA                                  |

### Section 3: Result Summary

#### 3.1 Results Summary Table

##### Conducted emissions

| Basic Standard                                 | Technical Requirements / Details   | Result |
|--|--|--------|
| FCC 15.247<br>RSS-247<br>LP0002:3.10.1(6.2.1)  | <b>6dB Bandwidth:</b><br>Systems using digital modulation techniques may operate in the 2400-2483.5MHz band. The minimum 6dB bandwidth shall be at least 500 kHz.  | Pass   |
| FCC 15.247<br>RSS-247                          | <b>99% &amp; 26 dB Bandwidth:</b><br>The 99% occupied bandwidth is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers are each equal to 0.5% of the total mean power of the given emission. There is no limit for 99% OBW.<br><br>The 26 dB emission is the width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 26 dB relative to the maximum level measured in the fundamental emission.   | Pass   |
| FCC 15.247<br>RSS-247<br>LP0002:3.10.1(2.3)    | <b>Output Power:</b><br><b>15.247</b> The maximum conducted output power of the intentional radiator for systems using digital modulation in the 2400-2483.5 MHz band shall not exceed 1 Watt (30dBm). If transmitting antennas of directional gain greater than 6 dBi are used, the maximum conducted output power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.<br><br><b>RSS-247</b> For DTSs employing digital modulation techniques operating in the band 2400-2483.5 MHz, the maximum peak conducted output power shall not exceed 1W. Except as provided in Section 5.4(5), the e.i.r.p. shall not exceed 4 W.   | Pass   |
| FCC 15.247<br>RSS-247<br>LP0002:3.10.1(6.2.2)  | <b>Power Spectral Density:</b><br>For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission.  | Pass   |
| FCC 15.247<br>RSS-247<br>LP0002:3.10.1(5)/2.8  | <b>Conducted Spurious Emissions / Band-Edge:</b><br>In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required | Pass   |
| FCC 15.247<br>RSS-247<br>FCC 15.205<br>RSS-Gen | <b>Restricted band:</b><br>Unwanted emissions falling within the restricted bands, as defined in FCC 15.205 (a) and RSS-Gen 8.10 must also comply with the radiated emission limits specified in FCC 15.209 (a) and RSS-Gen 8.9.   | Pass   |

**Radiated Emissions (General requirements)**

| Basic Standard                                | Technical Requirements / Details   | Result |
|---|--|--------|
| FCC 15.209<br>RSS-Gen<br>LP0002:3.10.1(5)/2.8 | <b>TX Spurious Emissions:</b><br>Except as provided elsewhere in this subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the filed strength limits table in this section. Unwanted emissions falling within the restricted bands, as defined in FCC 15.205 (a) and RSS-Gen 8.10 must also comply with the radiated emission limits specified in FCC 15.209 (a) and RSS-Gen 8.9.   | Pass   |
| RSS-Gen<br>LP0002:3.10.1(5)2.8                | <b>RX Spurious Emissions:</b><br><b>RSS-Gen 8.9</b> Except when the requirements applicable to a given device state otherwise, emissions from licence-exempt transmitters shall comply with the field strength limits shown in Table 4 and Table 5 below. Additionally, the level of any transmitter emission shall not exceed the level of the transmitter's fundamental emission.<br><b>RSS-Gen 8.10</b> Unwanted emissions that fall into restricted bands of Table 6 shall comply with the limits specified in RSS-Gen; and (c ) Unwanted emissions that do not fall within the restricted frequency bands of Table 6 shall comply either with the limits specified in the applicable RSS or with those specified in this RSS-Gen. | Pass   |
| FCC 15.207<br>RSS-Gen<br>LP0002:2.3           | <b>AC conducted Emissions:</b><br>Except when the requirements applicable to a given device state otherwise, for any radio apparatus equipped to operate from the public utility AC power supply, either directly or indirectly (such as with a battery charger), the radio frequency voltage of emissions conducted back onto the AC power lines in the frequency range of 0.15 MHz to 30 MHz shall not exceed the limits shown in the table in these sections. The more stringent limit applies at the frequency range boundaries.   | Pass   |

\* MPE calculation is recorded in a separate report

## Section 4: Sample Details

Note: Each sample was evaluated to ensure that its condition was suitable to be used as a test sample prior to the commencement of testing.

## Appendix A: Emission Test Results

### Conducted Test Setup Diagram

### Target Maximum Channel Power

The following table details the maximum supported Total Channel Power for all operating modes.

| Operating Mode                      | Maximum Channel Power (dBm EIRP) |      |      |
|-------------------------------------|----------------------------------|------|------|
|                                     | Frequency (MHz)                  |      |      |
|                                     | 2412                             | 2437 | 2462 |
| Legacy CCK, 1 to 11 Mbps            | 28                               | 29   | 27   |
| Non HT20, 6 to 54 Mbps              | 20                               | 28   | 21   |
| Non HT20 Beam Forming, 6 to 54 Mbps | 22                               | 31   | 22   |
| HT/VHT20, M0 to M15                 | 19                               | 28   | 20   |
| HT/VHT20 Beam Forming, M0 to M15    | 20                               | 31   | 21   |
| HT/VHT20 STBC, M0 to M7             | 19                               | 28   | 20   |

## A.1 6dB Bandwidth

**15.247 / RSS-247 / LP0002:3.10.1(6.2.1)** Systems using digital modulation techniques may operate in the 2400-2483.5MHz band. The minimum 6dB bandwidth shall be at least 500 kHz.

**6dB Bandwidth, 2437 MHz, CCK, 1 to 11 Mbps**

## A.2 99% and 26dB Bandwidth

The 99% occupied bandwidth is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers are each equal to 0.5% of the total mean power of the given emission. There is no limit for 99% OBW.

The 26 dB emission is the width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 26 dB relative to the maximum level measured in the fundamental emission.

### Test Procedure

Ref. ANSI C63.10: 2013

#### 26 BW & 99% BW

##### Test Procedure

1. Set the radio in the continuous transmitting mode.
2. Allow the trace to stabilize.
3. Setting the x-dB bandwidth mode to -26dB & OBW to 99% within the measurement set up function.
4. Select the automatic OBW measurement function of an instrument to perform bandwidth measurement.
5. Capture graphs and record pertinent measurement data.

Ref. ANSI C63.10: 2013 section 6.9.3

#### 26 BW & 99% BW

##### Test parameters

X dB BW = -26dB (using the OBW function of the spectrum analyzer)

OBW = 99%

Span = 1.5 to 5 times the OBW

RBW = 1% to 5% of the OBW

VBW  $\geq$  3 x RBW

Sweep = Auto couple

Detector = Peak or where practical sample shall be used

Trace = Max. Hold

**26dB / 99% Bandwidth, 2412 MHz, CCK, 1 to 11 Mbps**

### A.3 Maximum Conducted Output Power

**15.247 / RSS-247 section 5.4 / LP0002:3.10.1(2.3)** The maximum conducted output power of the intentional radiator for systems using digital modulation in the 2400-2483.5 MHz band shall not exceed 1 Watt (30dBm). If transmitting antennas of directional gain greater than 6 dBi are used, the maximum conducted output power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

As an alternative to a peak power measurement, compliance can be based on a measurement of the maximum conducted output power. The maximum conducted output power is the total transmit power delivered to all antennas and antenna elements, averaged across all symbols in the signaling alphabet when the transmitter is operating at its maximum power control level. Power must be summed across all antennas and antenna elements. The average must not include any time intervals during which the transmitter is off or transmitting at a reduced power level. If multiple modes of operation are implemented, the maximum conducted output power is the highest total transmit power occurring in any mode.

The maximum supported antenna gain is (GAIN\_MAX\_TRANSMIT\_POWER)dBi. The peak correlated gain for each mode is listed in the table below.

#### Test Procedure

Ref. KDB 558074 D01 DTS Meas Guidance v03r05  
ANSI C63.10: 2013

#### Maximum Conducted Output power

Test Procedure

1. Set the radio in the continuous transmitting mode at full power
2. Compute power by integrating the spectrum across the EBW (or alternatively entire 99% OBW) of the signal using the instrument's band power measurement function. The integration shall be performed using the spectrum analyzer band-power measurement function with band limits set equal to the EBW or the OBW band edges.
3. Capture graphs and record pertinent measurement data.

Ref. 558074 D01 DTS Meas Guidance v03r05 section 9.2 Method AVGSA-1  
ANSI C63.10: 2013 section 11.9.2 Method AVGSA-1

#### Maximum Conducted Output power

Test parameters

Span = >1.5 times the OBW  
RBW = 1MHz  
VBW ≥ 3 x RBW  
Sweep = Auto couple  
Detector = Peak  
Trace = Trace Average 100

The "measure-and-sum technique" is used for measuring in-band transmit power of a device. In the measure-and-sum approach, the conducted emission level is measured at each antenna port. The measured results at the various antenna ports are then summed mathematically to determine the total emission level from the device. Summing is performed in linear power units. (See ANSI C63.10 section 14.3 for Guidance)

**Maximum Transmit Output Power, 2437 MHz, CCK, 1 to 11 Mbps**

**Antenna A**

**Antenna B**

## A.4 Power Spectral Density

**15.247 / RSS-247 / LP0002:3.10.1(6.2.2)** For digitally modulated systems, the peak power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission.

### Test Procedure

**Ref. KDB 558074 D01 DTS Meas Guidance v03r05**  
ANSI C63.10: 2013

|  |
|--|
| <b>Power Spectral Density</b><br>Test Procedure  |
| 1. Set the radio in the continuous transmitting mode at full power<br>2. Configure Spectrum analyzer as per test parameters below and Peak search marker<br>3. Capture graphs and record pertinent measurement data. |

**Ref. 558074 D01 DTS Meas Guidance v03r05 section 10.2 Peak PSD**

**Power Spectral Density, 2437 MHz, CCK, 1 to 11 Mbps**

## A.5 Conducted Spurious Emissions

**15.205 / 15.209 / LP0002** - Radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)).

**RSS-Gen 8.9:** Except when the requirements applicable to a given device state otherwise, emissions from licence-exempt transmitters shall comply with the field strength limits shown in Table 4 and Table 5 below. Additionally, the level of any transmitter emission shall not exceed the level of the transmitter's fundamental emission.

**RSS-Gen 8.10 (b)** Unwanted emissions that fall into restricted bands of Table 6 shall comply with the limits specified in RSS-Gen; and **(c)** Unwanted emissions that do not fall within the restricted frequency bands of Table 6 shall comply either with the limits specified in the applicable RSS or with those specified in this RSS-Gen.

Use formula below to substitute conducted measurements in place of radiated measurements

$$E[\text{dB}\mu\text{V}/\text{m}] = \text{EIRP}[\text{dBm}] - 20 \log(d[\text{meters}]) + 104.77, \text{ where } E = \text{field strength and } d = 3 \text{ meter}$$

- 1) Average Plot, Limit= -41.25 dBm eirp
- 2) Peak plot, Limit = -21.25 dBm eirp

### Test Procedure

**Ref.** KDB 558074 D01 DTS Meas Guidance v03r05  
ANSI C63.10: 2013

#### Conducted Spurious Emissions

##### Test Procedure

1. Connect the antenna port(s) to the spectrum analyzer input.
2. Place the radio in continuous transmit mode
3. Configure Spectrum analyzer as per test parameters below (be sure to enter all losses between the transmitter output and the spectrum analyzer).
4. Use the peak marker function to determine the maximum spurs amplitude level.
5. The "measure-and-sum technique" is used for measuring in-band transmit power of a device. In the measure-and-sum approach, the conducted emission level is measured at each antenna port. The measured results at the various antenna ports are then summed mathematically to determine the total emission level from the device. Summing is performed in linear power units. The worst case output is recorded. (see ANSI C63.10 2013 section 14.3.2.2)
6. Capture graphs and record pertinent measurement data.

**Conducted Spurs Peak, 2437 MHz, HT/VHT20 Beam Forming, M0 to M7**

**Antenna A**

**Antenna B**

## A.6 Conducted Bandedge

**15.205 / 15.247 / RSS-Gen / RSS-247 / LP0002:3.10.1(5) & 2.8** In any 100 kHz bandwidth outside the frequency band in which the digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 30 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power.

Radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), and RSS-Gen 8.10 must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)) and RSS-Gen 8.9..

### Test Procedure

**Ref.** KDB 558074 D01 DTS Meas Guidance v03r05  
ANSI C63.10: 2013

| <b>Conducted Band edge</b>  |  |
|---|--|
| Test Procedure  |  |
| 1. Connect the antenna port(s) to the spectrum analyzer input.<br>2. Place the radio in continuous transmit mode. Use the procedures in KDB 558074 D01 DTS Meas Guidance v03r05 to substitute conducted measurements in place of radiated measurements.<br>3. Configure Spectrum analyzer as per test parameters below below (be sure to enter all losses between the transmitter output and the spectrum analyzer).<br>4. Place a marker at the end of the restricted band closest to the transmit frequency to show compliance.<br>Also measure any emissions in the restricted bands..<br>5. The “measure-and-sum technique” is used for measuring in-band transmit power of a device. In the measure-and-sum approach, the conducted emission level is measured at each antenna port. The measured results at the various antenna ports are then summed mathematically to determine the total emission level from the device. Summing is performed in linear power units. The worst case output is recorded.<br>6. Place a marker at the end of the restricted band closest to the transmit frequency to show compliance.<br>Also measure any emissions in the restricted bands<br>7. Capture graphs and record pertinent measurement data. |  |

### Radiated Emission Setup Diagram-Below 1G

### Radiated Emission Setup Diagram-Above 1G

## B.1 Radiated Spurious Emissions

**15.205 / RSS-Gen / LP0002:3.10.1(5)/2.8** Radiated emissions which fall in the restricted bands, as defined in Section 15.205(a) and RSS-Gen 8.10, must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)) and RSS-Gen 8.9.

**Ref.** ANSI C63.10: 2013 section 4.1.4.2.2, 4.1.4.2.3, 6.6.4 & 11.12.2

Using Vasona, configure the spectrum analyzer as shown below (be sure to enter all losses between the transmitter output and the spectrum analyzer). Place the radio in continuous transmit mode.

Span: 1GHz – 18 GHz  
 Reference Level: 80 dBuV  
 Attenuation: 10 dB  
 Sweep Time: Coupled  
 Resolution Bandwidth: 1MHz  
 Video Bandwidth: 3 MHz for peak, 1 KHz for average  
 Detector: Peak

Terminate the access Point RF ports with 50 ohm loads.

Maximize Turntable (find worst case table angle), Maximize Antenna (find worst case height)

Save 2 plots: 1) Average plot, Limit= 54dBuV/m @3m  
 2) Peak plot, Limit = 74dBuV/m @3m

Place a marker at the end of the restricted band closest to the transmit frequency to show compliance. Also measure any emissions in the restricted bands.

This report represents the worst case data for all supported operating modes and antennas. There are no measurable emissions above 18 GHz.

| System Number | Description | Samples | System under test                   | Support equipment                   |
|---------------|-------------|---------|-------------------------------------|-------------------------------------|

**Peak Radiated Transmitter Spurs, 2437 MHz, CCK, 1 to 11 Mbps**

**Peak Radiated Transmitter Spurs, 2462 MHz, CCK, 1 to 11 Mbps**

**Peak Radiated Transmitter Spurs, All rates, All Modes**

No emissions seen above 18GHz, the plot above represents worst case for all modes tested.

## B.2 Receiver Spurious Emissions

**RSS-Gen** Receivers are required to comply with the limits of spurious emissions as set out in this section. Receiver emission measurements are to be performed as per the normative test method referenced in Section 3.

Radiated emissions which fall in the restricted bands, as defined in RSS-Gen section 8.10, must also comply with the radiated emission limits specified in RSS-Gen section 8.9.

For emissions at frequencies below 1 GHz, measurements shall be performed using a CISPR quasi-peak detector and the related measurement bandwidth. At frequencies above 1 GHz, measurements shall be performed using a linear average detector with a minimum resolution bandwidth of 1 MHz.

| Video Bandwidth:      | 3MHz for Peak, 1 kHz for average |
| Detector:             | Peak                             |

Radiated emission measurements shall be performed with the receiver antenna connected to the receiver antenna terminals.

Maximize Turntable (find worst case table angle), Maximize Antenna (find worst case height)

Save plot: 1) Average Plot (Vertical and Horizontal), Limit= 54dBuV/m @3m  
2) Peak Plot (Vertical and Horizontal), Limit= 74dBuV/m @3m

This report represents the worst case data for all supported operating modes and antennas. There are no measurable emissions above 18 GHz.

See Appendix C for list of test equipment

## B.2.A Receiver Radiated Spurious Emissions (Average Measurements)

### Average Radiated Receiver Spurs, All Rates, All Modes, (1-18GHz)

### Radiated Receiver Spurs, All rate, All modes, Average (18-26.5GHz)

No emissions seen above 18GHz. The plots above are representative of all modes tested.

## B.2.A Receiver Radiated Spurious Emissions (Peak Measurements)

### Peak Radiated Receiver Spurs, All Rates, All Modes, (1-18GHz)

### Radiated Receiver Spurs, All rate, All modes, Peak (18-26.5GHz)

No emissions seen above 18GHz. The plots above are representative of all modes tested.

## B.3 Radiated Emissions 30MHz to 1GHz

**15.205 / 15.209 / RSS-Gen / LP0002:3.10.1(5)/2.8** Radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)) and RSS-Gen section 8.9.

**Ref. ANSI C63.10: 2013 section 6.5**

Using Vasona, configure the spectrum analyzer as shown below (be sure to enter all losses between the transmitter output and the spectrum analyzer). Place the radio in continuous transmit mode.

|                       |                               |
|-----------------------|-------------------------------|
| Span:                 | 30MHz – 1GHz                  |
| Reference Level:      | 80 dBuV                       |
| Attenuation:          | 10 dB                         |
| Sweep Time:           | Coupled                       |
| Resolution Bandwidth: | 100kHz                        |
| Video Bandwidth:      | 300kHz                        |
| Detector:             | Peak for Pre-scan, Quasi-Peak |

Compliance shall be determined using CISPR quasi-peak detection; however, peak detection is permitted as an alternative to quasi-peak detection.

Terminate the access Point RF ports with 50 ohm loads.

Maximize Turntable (find worst case table angle), Maximize Antenna (find worst case height)

This report represents the worst case data for all supported operating modes and antennas.

## B.4 AC Conducted Emissions

**FCC 15.207 (a) & RSS-Gen 8.8 / LP0002:2.3** Except when the requirements applicable to a given device state otherwise, for any radio apparatus equipped to operate from the public utility AC power supply, either directly or indirectly (such as with a battery charger), the radio frequency voltage of emissions conducted back onto the AC power lines in the frequency range of 0.15 MHz to 30 MHz shall not exceed the limits shown in the table in these sections. The more stringent limit applies at the frequency range boundaries.

### Measurement Procedure

Accordance with ANSI C63.10:2013 section 6.2

Using Vasona, configure the spectrum analyzer as shown below (be sure to enter all losses between the transmitter output and the spectrum analyzer). Place the radio in continuous transmit mode.

|                       |                      |
|-----------------------|----------------------|
| Span:                 | 150 KHz – 30 MHz     |
| Attenuation:          | 10 dB                |
| Sweep Time:           | Coupled              |
| Resolution Bandwidth: | 9 KHz                |
| Video Bandwidth:      | 30 KHz               |
| Detector:             | Quasi-Peak / Average |

| System Number | Description | Samples | System under test                   | Support equipment                   |
|---------------|-------------|---------|-------------------------------------|-------------------------------------|
| 1             | EUT         | S01     | <input checked="" type="checkbox"/> | <input type="checkbox"/>            |
|               | Support     | S02     | <input type="checkbox"/>            | <input checked="" type="checkbox"/> |

|                                    |  |
|------------------------------------|--|
| <b>Tested By :</b><br>Jose Aguirre | <b>Date of testing:</b><br>16-Dec-16 - 06-Feb-17 |
| <b>Test Result : PASS</b>          |  |

See separate EMC test report for test data.

**Graphical Test Results**

## Appendix E: Abbreviation Key and Definitions

The following table defines abbreviations used within this test report.

| Abbreviation | Description  | Abbreviation | Description                         |
|--------------|--|--------------|-------------------------------------|
| EMC          | Electro Magnetic Compatibility                                       | °F           | Degrees Fahrenheit                  |
| EMI          | Electro Magnetic Interference  | °C           | Degrees Celsius                     |
| EUT          | Equipment Under Test   | Temp         | Temperature                         |
| ITE          | Information Technology Equipment                                     | S/N          | Serial Number                       |
| TAP          | Test Assessment Schedule   | Qty          | Quantity                            |
| ESD          | Electro Static Discharge   | emf          | Electromotive force                 |
| EFT          | Electric Fast Transient  | RMS          | Root mean square                    |
| EDCS         | Engineering Document Control System                                  | Qp           | Quasi Peak                          |
| Config       | Configuration  | Av           | Average                             |
| CIS#         | Cisco Number (unique identification number for Cisco test equipment) | Pk           | Peak                                |
| Cal          | Calibration  | kHz          | Kilohertz ( $1 \times 10^3$ )       |
| EN           | European Norm  | MHz          | MegaHertz ( $1 \times 10^6$ )       |
| IEC          | International Electro technical Commission                           | GHz          | Gigahertz ( $1 \times 10^9$ )       |
| CISPR        | International Special Committee on Radio Interference                | H            | Horizontal                          |
