Attestation Statements on compliance for CP-DX80

The client device software does not support Active scanning on 2.4 GHz channels 12, 13, and 14. Further as the device does not have DFS detection capabilities, it only supports Passive scanning on the 5250- 5350 MHz and 5470- 5725MHz as required by FCC regulations and guidance. Accordingly passive scanning provides protection for TDWR operations and preventing transmission in the 5600MHz - 5650MHz frequency band.

Sincerely,

A handwritten signature in black ink, appearing to read "Gerard Thorpe".
