Section 1: Overview

1.1 Test Summary

samples were assessed against the tests detailed in section 3 under the requirements of the following specifications:

| Emission | Immunity |
|-----------------------------|----------|
| CFR47 Part 15.407 RSS210 | N/A |

The specifications listed above represent actual tests performed to demonstrate compliance against the specifications and basic standards listed on the front cover of this report. This list is not a one to one match to the front cover for one or more of the following reasons.

1. Basic standards call up many different test phenomena specifications such as the 61000-4-X series. The basic standards define which elements and levels shall be applied from these specifications and as such it is not appropriate to list the individual specifications on the front cover.
2. A Standard listed on the front cover may be required in a particular country but is not appropriate for the particular technologies included in the equipment under test. E.g. You cannot test a DC product to the mains Harmonics requirements in EN61000-3-2. See section 3.2.
3. Test results against a particular standard or specification may be included in a different test report. See section 3.2 for an EDCS reference of this data.
4. Where appropriate, Cisco may have substituted a later revision of a basic standard to those referenced in the specification on the front sheet of this test report. This decision was based upon improved test methodology and repeatability and/or where the newer revision represented a more stringent test.
5. Where relevant, testing has been carried out to the requirements of both EN and IEC Specifications. This was possible because of the similarities of the test methods involved and the Cisco EMC test procedures.
6. Testing may have been performed to an equivalent test that satisfies the requirements of the standards and specifications listed on the front cover of the report. See section 3.2.
7. Where radiated emissions testing has been performed to EN55022/CISPR22 the additional requirements of VCCI: V- 3/2006.04, EN55022: 1994 +A1/2 and CAN/CSA- CISPR 22-02 have also been evaluated unless otherwise stated.
8. Testing to the requirements of CFR47 Part 15 was performed against the CISPR22 limits. The results are therefore deemed satisfactory evidence of compliance with Industry Canada Interference Causing Equipment Standard ICES-003.
9. Where assessment has been performed to CISPR24, all the applicable test requirements may have not been covered. Refer to the results section for the tests performed.

Notes:

- 1) Where a specification listed on the front cover of this report has deviations from the basic standards listed above, the additional technical requirements of the specification were also assessed.
- 2) Where appropriate, Cisco may have substituted a later revision of a basic standard to those referenced in the specification on the front sheet of this test report. This decision was based upon improved test methodology and repeatability and/or where the newer revision represented a more stringent test.
- 3) Where relevant, testing has been carried out to the requirements of both EN and IEC Specifications. This was possible because of the similarities of the test methods involved and the Cisco EMC test procedures.

Section 2: Assessment Information

2.1 General

This report contains an assessment of an apparatus against Electromagnetic Compatibility Standards based upon tests carried out on the samples submitted. The testing was performed by and for the use of Cisco systems Inc:

With regard to this assessment, the following points should be noted:

- a) The results contained in this report relate only to the items tested and were obtained in the period between the date of the initial assessment and the date of issue of the report. Manufactured products will not necessarily give identical results due to production and measurement tolerances.
- b) The apparatus was set up and exercised using the configuration and modes of operation defined in this report only.
- c) Where relevant, the apparatus was only assessed using the susceptibility criteria defined in this report and the Test Assessment Plan (TAP).
- d) All testing was performed under the following environmental conditions:
 - Temperature 15°C to 35°C (54°F to 95°F)
 - Atmospheric Pressure 860mbar to 1060mbar (25.4" to 31.3")
 - Humidity 10% to 75*%

*[Where applicable] For ESD testing the humidity limits used were 30% to 60% and for EFT/B tests the humidity limits used were 25% to 75%.
- e) All AC testing was performed at one or more of the following supply voltages:
 - 110V 60 Hz (+/-20%)
 - 220V 50 Hz (+/-20%)

This report must not be reproduced except in full, without written approval of Cisco Systems.

2.2 Start Date of Testing

6-February-2014

2.3 Report Issue Date

Cisco Systems, Inc. uses an electronic system to issue, store and control the revision of test reports. This system is called the Engineering Document Control System (EDCS). The actual report issue date is embedded into the original file on EDCS. Any copies of this report, either electronic or paper, that are not on EDCS must be considered uncontrolled

2.4 Testing facilities

This assessment was performed by:

Testing Laboratory

Cisco Systems, Inc.,

Johanna Knudsen, Jose Aguirre

2.5 Equipment Assessed (EUT)

CP-DX80

2.6 EUT Description

The CP-DX80 is a 23 inch HD1080p video capable personal desktop collaboration endpoint that extends the DX series portfolio utilizing Android OS 4.1.1 (EX-60 replacement).

23 inch touch LDF

16 GB eMMC Flash memory (only 8 GB available) & 2 GB RAM

2 Gigabit Ethernet ports (1 for Network Uplink & 1 for Laptop connection)

3 standard A USB ports (2 in the back and 1 on the right side)

1 standard B USB port (with ADB support)

1 micro B USB port

1 HDMI for video out (to external monitor) with a maximum resolution of 1920 x 1200

1 HDMI for video in (from laptop)

1 micro SD card slot

1 Kensington Lock

Wi-Fi (802.11 a/b/g/n) & Bluetooth 3.0

Marvell 88W8787 - Wi-Fi + Bluetooth chip

Murata module LBEH1ZNRZC-TEMP, supports 802.11/a/b/g/n + Bluetooth 3.0 chip

SDIO interface to WLAN – Omap4 SD host controller port 5

PCM (McBSP1) interface to Bluetooth

Single OMAP4470 Architecture, with dual Cortex A9 running at 1.5GHz

Single antenna for 2.4 GHz and 5 GHz bands with diplex inside the module (SISO)

Amphenol SAA CI4671-15-000-R

4.61 dBi peak gain for 2.4 Ghz

7.05 dBi peak gain for 5 GHz

Coexistence between Wi-Fi and Bluetooth (1 antenna utilized)

Supports frequencies/channels 2.412 – 2.472 GHz & 5.180 – 5.825 GHz

Up to 72 Mbps (20 MHz channel), Up to 150 Mbps (40 MHz channel width)

Non- HT20 - 1 to 54 Mbps

HT20 - M0 to M7 (7 to 72 Mbps)

HT40 - M0 to M7 (15 to 150 Mbps)

802.11i security standard (WPA/WPA2)

2.7 Scope of Assessment

Tests have been performed in accordance with the relevant Test and Assessment Plan (TAP), a copy of which is contained in Appendix F of this report, and the relevant Cisco Systems, Inc. radio test procedures (EDCS-420238). This test report may not cover all of the tests highlighted in the test plan.

2.8 Units of Measurement

The units of measurements defined in the appendices are reported in specific terms, which are test dependent. Where radiated measurements are concerned these are defined at a particular distance. Basic voltage measurements are defined in units of [dBuV]

As an example, the basic calculation for all measurements is as follows:

$$\text{Emission level [dBuV]} = \text{Indicated voltage level [dBuV]} + \text{Cable Loss [dB]} + \text{Other correction factors [dB]}$$

The combinations of correction factors are dependent upon the exact test configurations [see test equipment lists for further details] and may include:-

Antenna Factors, Pre Amplifier Gain, LISN Loss, Pulse Limiter Loss and Filter Insertion Loss..

Note: to convert the results from dBuV/m to uV/m use the following formula:-

$$\text{Level in uV/m} = \text{Common Antilogarithm} [(X \text{ dBuV/m})/20] = Y \text{ uV/m}$$

Section 3: Result Summary

Conducted emissions

| Basic Standard | Result |
|-----------------------------------|--------|
| 99% and 26dB Bandwidth | Pass |
| Peak Output Power | Pass |
| Power Spectral Density | Pass |
| Peak Excursion | Pass |
| Conducted Spurious Emissions | Pass |
| Restricted Band Edge Measurements | Pass |

Radiated emissions

| Basic Standard | Result |
|--|--------|
| Radiated Spurious and Harmonic Emissions | Pass |
| Co-Locator Radiated Spurious Emissions | Pass |

Section 4: Sample Details

Note: Each sample was evaluated to ensure that its condition was suitable to be used as a test sample prior to the commencement of testing.

4.1 Sample Details

| Sample Number | Equipment Details | Serial Number | Part Number |
|---------------|-------------------|---------------|--------------------------|
| S01 | CP-DX80 | FOC1801N7WM | CSO 68-00355-01 04 (P2) |
| S02 | CP-DX80 | FOC1809N3R2 | CSO 68-00355-01 04 (P3A) |

The following antennas were evaluated as part of this testing process. The antennas listed reflect the maximum gain allowed for each family type of antenna:

Fixed internal Amphenol Dual Band Antenna at 5GHz, Gain: 7.05 peak (no external antenna can be used)

- 5150 – 5250MHz: 3.4 dBi
- 5250 – 5350MHz: 4 dBi
- 5500 – 5700MHz: 6.1 dBi
- 5745 – 5850MHz: 7.05 dBi

4.2 System Details

| System # | Description | Samples |
|----------|---|---------|
| 1 | Radio Test Sample - Manufacturing Image | S01 |
| 2 | Radio Test Sample – Production Image | S02 |

4.3 Mode of Operation Details

| Mode# | Description | Comments |
|-------|--|--|
| 1 | 802.11 Test Mode | System is placed in a continuous Tx State at various channels per Test Requirements. 802.11a running at 6Mbps, HT20 running at M0 and HT40 running M0. Manufacturing image used. |
| 2 | 802.11 Test Mode + Bluetooth for co-location | System is placed in a continuous Tx State at various channels per Test Requirements. 802.11a running at 6Mbps, HT20 running at M0 and HT40 running M0. Production image used. |

Section 5: Modifications

5.1 Sample Modifications Performed During Assessment

No modifications were performed during assessment.

Appendix A: Emission Test Results

Target Maximum Channel Power

The following table details the maximum supported Total Channel Power for all operating modes.

| Operating Mode | Maximum Channel Power (dBm) | | |
|------------------------|-----------------------------|------|------|
| | Frequency (MHz) | | |
| | 5500 | 5580 | 5700 |
| 802.11a, 6 to 54 Mbps | 16 | 16 | 16 |
| 802.11n HT20, M0 to M7 | 13 | 13 | 13 |
| | 5510 | 5590 | 5670 |
| 802.11n HT40, M0 to M7 | 12 | 12 | 12 |

99% and 26dB Bandwidth

Connect the antenna port(s) to the spectrum analyzer input. Using the spectrum analyzer Channel Bandwidth mode, configure the spectrum analyzer as shown below (enter all losses between the transmitter output and the spectrum analyzer).

Center Frequency: Frequency from table below
Span: 2 x Nominal Bandwidth (e.g. 40MHz for a 20MHz channel)
Reference Level: 20 dBm
Attenuation: 10 dB
Sweep Time: 5 s
Resolution Bandwidth: 1%-3% of 26 dB Bandwidth
Video Bandwidth: ≥Resolution Bandwidth
X dB Bandwidth: 26 dB
Detector: Peak
Trace: Single

Place the radio in continuous transmit mode. View the transmitter waveform on the spectrum analyzer, and record the pertinent measurements:

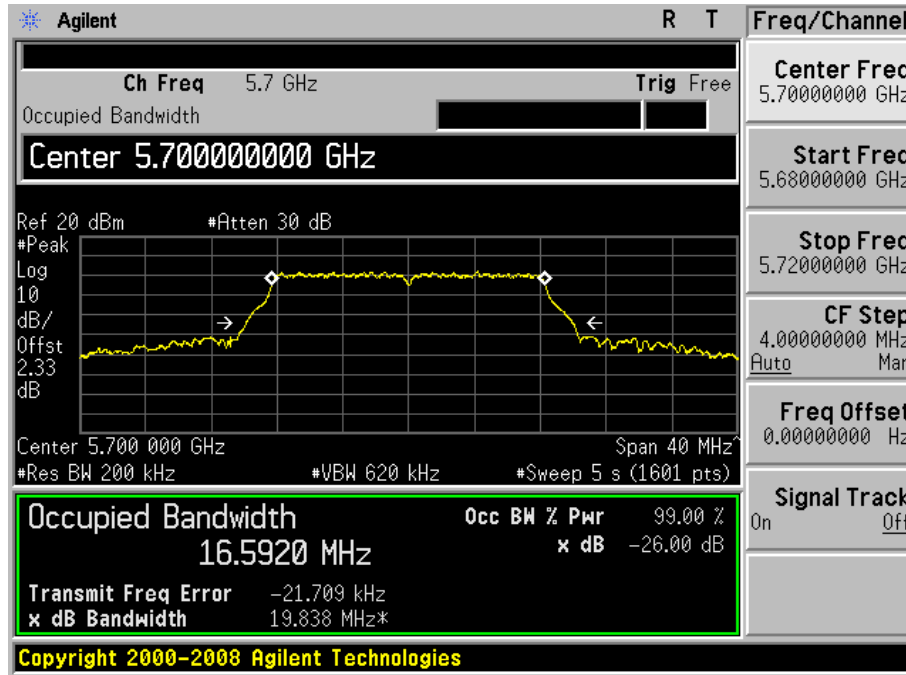

99% and 26dB Bandwidth for 802.11a

| Mode | Frequency (MHz) | Data Rate (Mbps) | 99% Bandwidth (MHz) | 26dB Bandwidth (MHz) |
|---------|-----------------|------------------|---------------------|----------------------|
| 802.11a | 5500 | 6 | 16.5785 | 19.855 |
| | 5580 | 6 | 16.6350 | 19.971 |
| | 5700 | 6 | 16.5920 | 19.838 |

Graphical Test Results for 802.11a:

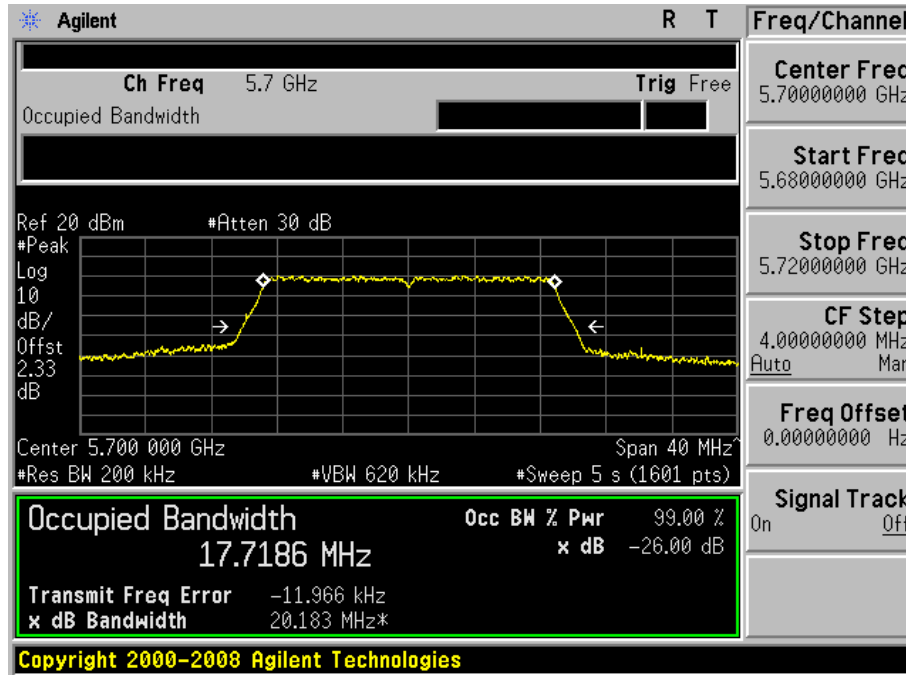

99% and 26dB Bandwidth for 802.11n (HT20)

| Mode | Frequency (MHz) | Data Rate (Mbps) | 99% Bandwidth (MHz) | 26dB Bandwidth (MHz) |
|-------------|-----------------|------------------|---------------------|----------------------|
| 802.11nHT20 | 5500 | M0 | 17.7163 | 20.215 |
| | 5580 | M0 | 17.7243 | 20.185 |
| | 5700 | M0 | 17.7186 | 20.183 |

Graphical Test Results for 802.11n (HT20):

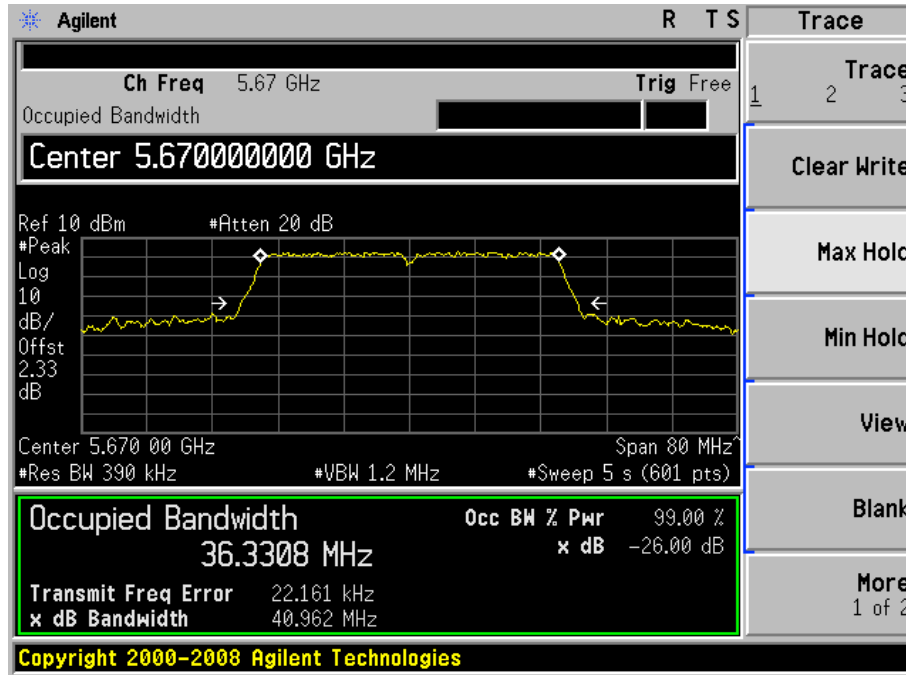

99% and 26dB Bandwidth for 802.11n (HT40)

| Mode | Frequency (MHz) | Data Rate (Mbps) | 99% Bandwidth (MHz) | 26dB Bandwidth (MHz) |
|-------------|-----------------|------------------|---------------------|----------------------|
| 802.11nHT40 | 5510 | M0 | 36.3168 | 40.853 |
| | 5590 | M0 | 36.3514 | 40.955 |
| | 5670 | M0 | 36.3308 | 40.962 |

Graphical Test Results for 802.11n (HT40):

Peak Output Power for 802.11a

15.407: For the bands 5.25-5.35 and 5.47-5.725 GHz, the maximum conducted output power over the frequency band of operation shall not exceed the lesser of 250 mW or $11 \text{ dBm} + 10 \log B$, where B is the 26-dB emission bandwidth in MHz. If transmitting antennas of directional gain greater than 6 dBi are used, the maximum conducted output power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

The smallest 26dB bandwidth for all channels is 19.838MHz. The maximum conducted output power is calculated as $11\text{dBm} + 10 \cdot \log(19.838 \text{ MHz}) = 23.975\text{dBm}$. This is less than 250mW (24dBm). The value of 0.1dBm was also subtracted from 23.975 to account for the antenna gain in excess of 6dBi. The resulting limit is 23.875dBm.

Power Spectral Density for 802.11a

15.407: For the bands 5.25-5.35 and 5.47-5.725 GHz, the peak power spectral density shall not exceed 11 dBm in any 1-MHz band. If transmitting antennas of directional gain greater than 6 dBi are used, the peak power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

The maximum supported antenna gain in the range 5.47-5.725GHz is 6.1 dBi. The resulting limit for PSD is 10.9dBm/MHz.

Method SA-1 from KDB 789033

Connect the antenna port(s) to the spectrum analyzer input. Place the radio in continuous transmit mode. Configure the spectrum analyzer as shown below.

| | |
|---|---|
| Enable "Channel Power" function of analyzer | |
| Center Frequency: | Frequency from table below |
| Span: | 20 MHz (must be greater than 26dB bandwidth, adjust as necessary) |
| Ref Level Offset: | Correct for attenuator and cable loss. |
| Reference Level: | 20 dBm |
| Attenuation: | 20 dB |
| Sweep Time: | Auto |
| Resolution Bandwidth: | 1 MHz |
| Video Bandwidth: | 3 MHz |
| Detector: | Sample |
| Trace: | Trace Average 100 traces in Power Averaging Mode |
| Integration BW: | =99% BW from 99% Bandwidth Data |

After averaging 100 traces of the transmitter waveform on the spectrum analyzer, record the spectrum analyzer Channel Power. Perform a Marker Peak Search function, and record this value as the Power Spectral Density.

Peak Output Power for 802.11a:

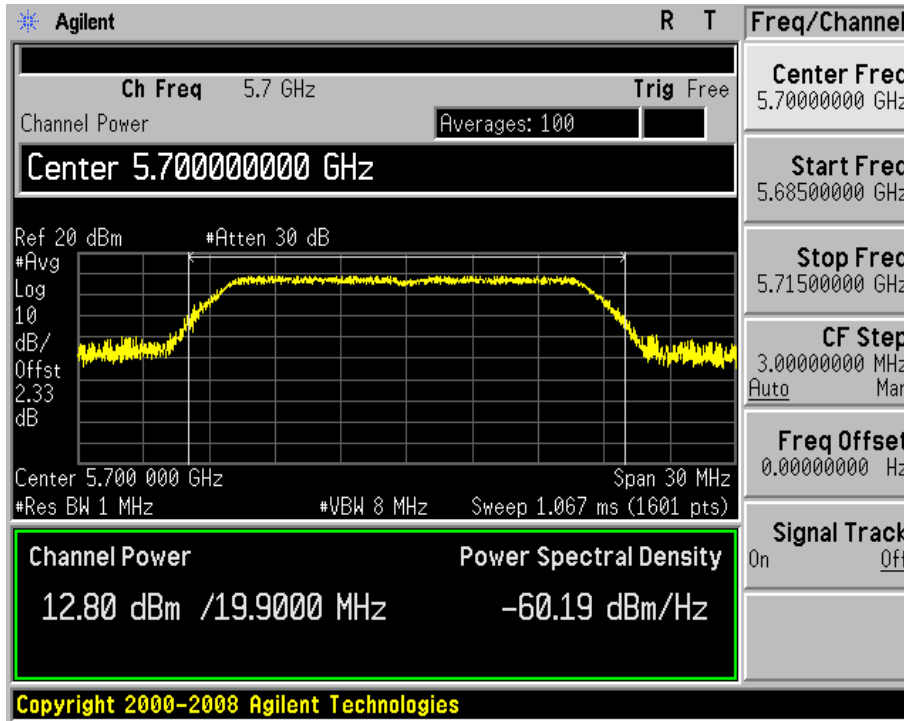

| Mode | Frequency (MHz) | Data Rate (Mbps) | Peak Output Power (dBm) | Limit (dBm) | Margin (dB) |
|---------|-----------------|------------------|-------------------------|-------------|-------------|
| 802.11a | 5500 | 6 | 11.47 | 23.875 | -12.405 |
| | 5580 | 6 | 12 | 23.875 | -11.875 |
| | 5700 | 6 | 12.8 | 23.875 | -11.075 |

Power Spectral Density for 11a:

| Mode | Frequency (MHz) | Data Rate (Mbps) | Power Spectral Density (dBm/MHz) | Limit (dBm) | Margin (dB) |
|---------|-----------------|------------------|----------------------------------|-------------|-------------|
| 802.11a | 5500 | 6 | 0.981 | 10.9 | -9.919 |
| | 5580 | 6 | 0.958 | 10.9 | -9.942 |
| | 5700 | 6 | 1.89 | 10.9 | -9.01 |

Graphical Test Results for 802.11a Peak Output Power:

Graphical Test Results for 802.11a Power Spectral Density:

Peak Output Power for 802.11n HT20:

15.407: For the bands 5.25-5.35 and 5.47-5.725 GHz, the maximum conducted output power over the frequency band of operation shall not exceed the lesser of 250 mW or $11 \text{ dBm} + 10 \log B$, where B is the 26-dB emission bandwidth in MHz. If transmitting antennas of directional gain greater than 6 dBi are used, the maximum conducted output power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

The smallest 26dB bandwidth for all channels is 20.183MHz. The maximum conducted output power is calculated as $11\text{dBm} + 10 \cdot \log(20.183\text{MHz}) = 24.0499\text{dBm}$. This is greater than 250mW (24dBm). The value of 0.1dBm was also subtracted from 24dBm to account for the antenna gain in excess of 6dBi. The resulting limit is 23.9dBm.

Power Spectral Density for 802.11n HT20

15.407: For the bands 5.25-5.35 and 5.47-5.725 GHz, the peak power spectral density shall not exceed 11 dBm in any 1-MHz band. If transmitting antennas of directional gain greater than 6 dBi are used, the peak power spectral density shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

The maximum supported antenna gain is 6.1dBi. The resulting limit for PSD is 10.9dBm/MHz.

Peak Output Power for 802.11n HT20:

| Mode | Frequency (MHz) | Data Rate (Mbps) | Peak Output Power (dBm) | Limit (dBm) | Margin (dB) |
|--------------|-----------------|------------------|-------------------------|-------------|-------------|
| 802.11n HT20 | 5500 | M0 | 10.42 | 23.9 | -13.48 |
| | 5580 | M0 | 11.17 | 23.9 | -12.73 |

Graphical Test Results for Power Spectral Density for 802.11n (HT40):

Peak Excursion

15.407: The ratio of the peak excursion of the modulation envelope (measured using a peak hold function) to the maximum conducted output power (measured as specified above) shall not exceed 13 dB across any 1 MHz bandwidth or the emission bandwidth whichever is less.

Set the spectrum analyzer span to view the entire emission bandwidth. The largest difference between the following two traces must be ≤ 13 dB for all frequencies across the emission bandwidth.

1st Trace: (Peak)

Set Span to encompass the entire emission bandwidth of the signal.

RBW = 1 MHz, VBW = 3 MHz

Detector = Peak

Sweep = Auto

Trace 1 = Max-hold

Ref Level Offset = correct for attenuator and cable loss

Ref Level = 20dBm

Atten = 10dBm

2nd Trace: (Average)

Trace 2 = clear right

Detector = Sample

Avg/VBW type = Pwr(RMS)

Average = 100

Sweep = single

Set marker Deltas

Trace 1 & Peak search

Marker Delta

Trace 2 & Peak search

Record the difference between the Peak and Average Markers

Peak Excursion for 802.11a

| Frequency (MHz) | Data Rate (Mbps) | Peak Excursion (dB) | Limit (dBm) | Margin (dB) |
|-----------------|------------------|---------------------|-------------|-------------|
| 5500 | 6 | 7.080 | 13 | -5.920 |
| 5580 | 6 | 7.142 | 13 | -5.858 |
| 5700 | 6 | 7.034 | 13 | -5.966 |

RSS-210 A9.4 (2)

Within the emission bandwidth, when the peak spectral density per MHz over any continuous transmission exceeds the average ($10 \log_{10} B$) value by more than 3 dB, the permissible power spectral density shall be reduced by the excess amount.

The smallest bandwidth was 16.5785MHz. Using this bandwidth, the equation above results in $10 \cdot \log(16.5785) = 12.195$ dBm. The limit is calculated by adding 3dB to this value. The resulting limit is 15.195dBm. The FCC limit is more strict.

Graphical Test Results

Title: Peak Excursion at 5580MHz, 6Mbps

Title: Peak Excursion at 5700MHz, 6Mbps

Peak Excursion for 802.11n HT20:

| Frequency (MHz) | Data Rate (Mbps) | Peak Excursion (dB) | Limit (dBm) | Margin (dB) |
|-----------------|------------------|---------------------|-------------|-------------|
| 5500 | M0 | 7.203 | 13 | -5.797 |
| 5580 | M0 | 7.515 | 13 | -5.485 |
| 5700 | M0 | 6.982 | 13 | -6.018 |

RSS-210 A9.4 (2)

Within the emission bandwidth, when the peak spectral density per MHz over any continuous transmission exceeds the average (10 log10 B) value by more than 3 dB, the permissible power spectral density shall be reduced by the excess amount.

The smallest bandwidth was 17.7163MHz. Using this bandwidth, the equation above results in $10 \cdot \log(17.7163) = 12.484\text{dBm}$. The limit is calculated by adding 3dB to this value. The resulting limit is 15.484dBm. The FCC limit is more strict.

Peak Excursion for 802.11n HT40:

| Frequency (MHz) | Data Rate (Mbps) | Peak Excursion (dB) | Limit (dBm) | Margin (dB) |
|-----------------|------------------|---------------------|-------------|-------------|
| 5510 | M0 | 7.045 | 13 | -5.955 |
| 5590 | M0 | 6.924 | 13 | -6.076 |
| 5670 | M0 | 6.829 | 13 | -6.171 |

RSS-210 A9.4 (2)

Within the emission bandwidth, when the peak spectral density per MHz over any continuous transmission exceeds the average (10 log₁₀ B) value by more than 3 dB, the permissible power spectral density shall be reduced by the excess amount.

The smallest bandwidth was 36.3168MHz. Using this bandwidth, the equation above results in 10*log₁₀(16.3168) =15.601dBm. The limit is calculated by adding 3dB to this value. The resulting limit is 18.601dBm. The FCC limit is more strict.

Graphical Test Results

Conducted Spurious Emissions

15.407: For transmitters operating in the 5.25-5.35 and 5.47-5.725 GHz band: all emissions outside of the 5.25-5.35 and 5.47-5.725 GHz bands shall not exceed an EIRP of -27dBm/MHz.

Connect the antenna port(s) to the spectrum analyzer input. Place the radio in continuous transmit mode. Configure the spectrum analyzer as shown below (be sure to enter all losses between the transmitter output and the spectrum analyzer).

| | |
|-----------------------|---------------|
| Span: | 30 MHz-40 GHz |
| Reference Level: | 20 dBm |
| Attenuation: | 10 dB |
| Sweep Time: | 10 s |
| Resolution Bandwidth: | 1 MHz |
| Video Bandwidth: | 3 MHz |
| Detector: | Peak |
| Trace: | Single |
| Marker: | Peak |

Record the marker waveform peak to spur difference

802.11a Graphical Test Results at 5500MHz:

Note that the data displayed on the plots detailed in this appendix were measured using a 'Peak Detector'. Please refer to the results table for the detectors used during formal measurements

802.11a Graphical Test Results at 5580MHz:

Note that the data displayed on the plots detailed in this appendix were measured using a 'Peak Detector'. Please refer to the results table for the detectors used during formal measurements

802.11a Graphical Test Results at 5700MHz:

Note that the data displayed on the plots detailed in this appendix were measured using a 'Peak Detector'. Please refer to the results table for the detectors used during formal measurements

Graphical Test Results for 802.11n (HT-20) 5500MHz:

Note that the data displayed on the plots detailed in this appendix were measured using a 'Peak Detector'. Please refer to the results table for the detectors used during formal measurements

Graphical Test Results for 802.11n (HT-20) 5580MHz:

Note that the data displayed on the plots detailed in this appendix were measured using a 'Peak Detector'. Please refer to the results table for the detectors used during formal measurements

Graphical Test Results for 802.11n (HT-20) 5700MHz:

Note that the data displayed on the plots detailed in this appendix were measured using a 'Peak Detector'. Please refer to the results table for the detectors used during formal measurements

Graphical Test Results for 802.11n (HT-40) 5510MHz:

Note that the data displayed on the plots detailed in this appendix were measured using a 'Peak Detector'. Please refer to the results table for the detectors used during formal measurements

Graphical Test Results for 802.11an (HT-40) 5590MHz:

Note that the data displayed on the plots detailed in this appendix were measured using a 'Peak Detector'. Please refer to the results table for the detectors used during formal measurements

Graphical Test Results for 802.11n (HT-40) 5670MHz:

Note that the data displayed on the plots detailed in this appendix were measured using a 'Peak Detector'. Please refer to the results table for the detectors used during formal measurements

Title: HT40 – 5670MHz

Conducted Band Edge

15.407: For transmitters operating in the 5.25-5.35 and 5.47-5.725 GHz band: all emissions outside of the 5.25-5.35 and 5.47-5.725 GHz bands shall not exceed an EIRP of -27dBm/MHz.

Connect the antenna port(s) to the spectrum analyzer input. Place the radio in continuous transmit mode. Configure the spectrum analyzer as shown below (be sure to enter all losses between the transmitter output and the spectrum analyzer).

Antenna gain in the band 5.47-5.725GHz is 6.1dBi
