## Section 2: Assessment Information

### 2.1 General

This report contains an assessment of an apparatus against Radio Standards based upon tests carried out on the samples submitted. The testing was performed by and for the use of Cisco systems Inc:

With regard to this assessment, the following points should be noted:

- a) The results contained in this report relate only to the items tested and were obtained in the period between the date of the initial assessment and the date of issue of the report. Manufactured products will not necessarily give identical results due to production and measurement tolerances.
- b) The apparatus was set up and exercised using the configuration and modes of operation defined in this report only.
- c) Where relevant, the apparatus was only assessed using the susceptibility criteria defined in this report and the Test Assessment Plan (TAP).

d) All testing was performed under the following environmental conditions:

Temperature	15°C to 35°C (59°F to 95°F)
Atmospheric Pressure	860mbar to 1060mbar (25.4" to 31.3")
Humidity	10% to 75*%

1. All DC testing was performed at one or more of the following supply voltages:

12VDC (The supply voltage range supports 12V-36VDC)

### 2.2 Units of Measurement

The units of measurements defined in the appendices are reported in specific terms, which are test dependent. Where radiated measurements are concerned these are defined at a particular distance. Basic voltage measurements are defined in units of [dBuV]

As an example, the basic calculation for all measurements is as follows:

Emission level [dBuV] = Indicated voltage level [dBuV] + Cable Loss [dB] + Other correction factors [dB]

The combinations of correction factors are dependent upon the exact test configurations [see test equipment lists for further details] and may include:-

Antenna Factors, Pre Amplifier Gain, LISN Loss, Pulse Limiter Loss and Filter Insertion Loss..

Note: to convert the results from dBuV/m to uV/m use the following formula:-

Level in uV/m = Common Antilogarithm [(X dBuV/m)/20] = Y uV/m

### Measurement Uncertainty Values

voltage and power measurements	$\pm 2$ dB
conducted EIRP measurements	$\pm 1.4$ dB
radiated measurements	$\pm 3.2$ dB
frequency measurements	$\pm 2.4$ 10 <sup>-7</sup>
temperature measurements	$\pm 0.54^\circ$ .
humidity measurements	$\pm 2.3\%$
DC and low frequency measurements	$\pm 2.5\%$ .

Where relevant measurement uncertainty levels have been estimated for tests performed on the apparatus. This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

Radiated emissions (expanded uncertainty, confidence interval 95%)

30 MHz - 300 MHz	+/- 3.8 dB
300 MHz - 1000 MHz	+/- 4.3 dB
1 GHz - 10 GHz	+/- 4.0 dB
10 GHz - 18GHz	+/- 8.2 dB
18GHz - 26.5GHz	+/- 4.1 dB
26.5GHz - 40GHz	+/- 3.9 dB

Conducted emissions (expanded uncertainty, confidence interval 95%)

30 MHz – 40GHz	+/- 0.38 dB
----------------	-------------

A product is considered to comply with a requirement if the nominal measured value is below the limit line. The product is considered to not be in compliance in case the nominal measured value is above the limit line.

**This report must not be reproduced except in full, without written approval of Cisco Systems.**

**2.3 Date of testing (initial sample receipt date to last date of testing)**

30-March-2021 to 09-April-2021

**2.4 Report Issue Date**

Cisco uses an electronic system to issue, store and control the revision of test reports. This system is called the Engineering Document Control System (EDCS). The actual report issue date is embedded into the original file on EDCS. Any copies of this report, either electronic or paper, that are not on EDCS must be considered uncontrolled

**2.5 Testing facilities**

This assessment was performed by:

**Testing Laboratory**

Cisco Systems, Inc.

## **2.6 Equipment Assessed (EUT)**

**Radio Module:** WP-WIFI6-B

**Host System:** IR1835-K9

## **2.7 EUT Description**

WP-WIFI6 is Wifi 802.11ax Wi-Fi 6 access point module for industrial IoT routing and gateway platforms which is a field replaceable Wifi interface module designed for IR1800 series platform. It includes a 2x2 MIMO 802.11ax 2.4 GHz radio and a 2x2 MIMO 802.11ax 5 GHz radio

IR1835-K9 is the next generation of IR829, based on IOS XE, with advanced features such as modular WiFi, modular Cellular/WAN, CAN Bus, Dead Reckoning etc.

The product has the following interfaces:

4 GE LAN Ports

1 GE WAN / 1 Fiber Port (Alternate to GE Copper port)

1 RS-232 Serial

1 RS232/RS485

1 Type-A USB for Storage

1 GPS Slot1.6 EUT Description

1 WIFI Slot

1 mSATA Slot

2 Cellular PIM Slots [Main Aux and GPS (Only on Sierra Wireless Modules)]

Alarm Port

Micro-USB

DC Power input (DC Min/Max 9-32)

## WiFi module Model/PID Differences

The WP-WIFI6 Access Point module is designed for use in many countries with varying regulatory requirements. The WP-WIFI6-A and WP-WIFI6-B, both have the same identical components, electronics circuitries, PCB layout and enclosure. The WP-WIFI6-A module is configured with the Canada country code and the WP-WIFI6-B module is configured with US country code. The US and Canada country codes are configured according to the test results demonstrated compliance in the RF conducted emissions FCC/RSS test reports. The difference between the 2 PIDs (WP-WIFI6-A and WP-WIFI6-B) is the UNII-1 (5150MHz – 5250MHz) band is not supported in the WP-WIFI6-A PID.

## Host system Model/PID differences

**IR1821-K9**

**IR1831-K9**

**IR1833-K9**

**IR1835-K9** ----- System Tested

The following host models are in the same IR18xx family. IR1835-K9 is the highly populated host model out of all 4 models and selected model for testing. The radio WP-WiFi6-E module in these host has the same identical components, electronics circuitries and PCB layout. Below table summarizes the differences between all four host models.

	IR1821-K9	IR1831-K9	IR1833-K9	IR1835-K9
Processor	600MHz	600MHz	600MHz	1200MHz
Memory	4GB	4GB	4GB	8GB
Single LTE Slots	✓	✗	✗	✗
Dual LTE Slot	✗	✓	✓	✓
WiFi (FRU)	✓	✓	✓	✓
PoE	✗	✗	✓	✓

	ANT-7-5G4WL2G1-O=	7-in-1 vehicle mount omnidirectional	<b>8 / 8</b>	<b>3</b>
	5G-ANTM-O-4-B=	9-in-1 vehicle mount omnidirectional	<b>8 / 8</b>	<b>3</b>

### Section 3: Result Summary

#### 3.1 Results Summary Table

##### Radiated Emissions (General requirements)

Basic Standard	Technical Requirements / Details	Result
FCC 15.209 FCC 15.205 FCC 15.247 (d) RSS-Gen	<b>TX Spurious Emissions:</b> Except as provided elsewhere in this subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the filed strength limits table in this section. Unwanted emissions falling within the restricted bands, as defined in FCC 15.205 (a) and RSS-Gen 8.10 must also comply with the radiated emission limits specified in FCC 15.209 (a) and RSS-Gen 8.9	Pass

## Section 4: Sample Details

Note: Each sample was evaluated to ensure that its condition was suitable to be used as a test sample prior to the commencement of testing. Please also refer to the “Justification for worst Case test Configuration” section of this report for further details on the selection of EUT samples.

### 4.1 Sample Details

Sample Number	Equipment Details	Serial Number	CISCO Part Number
S01	WP-WiFi6-B Single Band Radio in IR1835 Host system with 2.4Ghz Wi-Fi radio actives	Module: FOC24490FG7 Host: FCW2443P0DH	Module: 68-103267-01 13
S02	External Patch antenna (8 dBi Gain)	-----	5G-ANTM-O-4-B=

Note: The host system is powered by 12VDC. The host supply voltage range supports 12V-36VDC.

### 4.2 System Details

System #	Description	Samples
1	WP-WiFi6-B Dual Band Radio in IR1835 Host system with 2.4GHz Wi-Fi radio actives + ext. PS + ext. 8 dBi patch ant.	S01, S02

### 4.3 Mode of Operation Details

Mode (Radio band support, # of active antenna)	Wi-Fi Mode	Modulation	Data Rate
Transmit (dual antenna)	802.11HE20 (2.4GHz)	MIMO-OFDMA	M0h1
Receiver (dual antenna)	802.11HE20 (2.4GHz)	MIMO-OFDMA	M0h1

**Note: All testing was performed at 19dBm per antenna port which is maximum supported power level. The testing at maximum supported power will cover all other power levels and other supported modes**

## Appendix A: Radiated Spurious Emission

### A.1: Setup Diagram

Radiated Emission Setup Diagram-Below 1G  
(Preamp used is optional)

### Radiated Emission Setup Diagram-Above 1G

## **A.2: Radiated Spurious Emissions Test Requirements & Limits**

Emissions on frequency or frequencies which are outside the necessary bandwidth and level of which may be reduced without effecting the corresponding transmission of information. Spurious emissions include harmonic emissions, parasitic emissions, intermodulation products and frequency conversion products, but exclude out-of-band emissions.

## Restricted bands Limits

**15.247 (d)** In addition, radiated emissions which fall in the restricted bands, as defined in § 15.205(a), must also comply with the radiated emission limits specified in § 15.209(a) (see § 15.205(c)).

**15.205 (b)** Except as provided in paragraphs (d) and (e) of this section, the field strength of emissions appearing within these frequency bands shall not exceed the limits shown in [§ 15.209](#). At frequencies equal to or less than 1000 MHz, compliance with the limits in [§ 15.209](#) shall be demonstrated using measurement instrumentation employing a CISPR quasi-peak detector. Above 1000 MHz, compliance with the emission limits in [§ 15.209](#) shall be demonstrated based on the average value of the measured emissions. The provisions in [§ 15.35](#) apply to these measurements.

FCC Restricted Bands Table			
MHz	MHz	MHz	GHz
0.090-0.110	16.42-16.423	399.9-410	4.5-5.15

25.5-25.67	5350-5460	
37.5-38.25	7250-7750	
73-74.6	8025-8500	

**FCC 15.209**

The level of any unwanted emissions from an intentional radiator operating under these general provisions shall not exceed the level of the fundamental emission. Except as provided elsewhere in this subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the table specified in the table in FCC§15.209(a).

**RSS-Gen 8.9:**

Except where otherwise indicated in the applicable RSS, radiated emissions shall comply with the field strength limits shown in table below. Additionally, the level of any transmitter unwanted emission shall not exceed the level of the transmitter's fundamental emission.

<b>General Field Strength Limits Table</b>			
<b>Frequency (MHz)</b>	<b>Field strength (uV/meter)</b>	<b>Field strength (dBuV/meter)</b>	<b>Measurement distance (meters)</b>
30-88	100**	40 Qp	3
88-216	150**	43.5 Qp	3
216-960	200**	46 Qp	3
Above 960	500	54 Av / 74 Pk	3

The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz. Radiated emission limits in these three bands are based on measurements employing an average detector

### A.2.1: Limit Conversion (power to field strength)

The field strength limit in dB $\mu$ V can be converted from power (logarithmic) by using the field strength (linear) approach formula as follows:

$$V/m = \frac{\sqrt{30 \times P_t \times g_t}}{d}$$

where: **pt** = transmitter output power in watts,  
**gt** = numeric gain of the transmitting antenna (unit less),  
**E** = electric field strength in V/m,  
**d** = measurement distance in meters (m).

From the equation above, unit conversion from log => linear with a known power limit of -27 dBm.

#### (1) Conversion from dBm to Watt

$$\text{dBm to Watts } W = 10^{((\text{dBm} - 30)/10)}$$

$$\begin{aligned} P(W) &= 10^{(-27 - 30) / 10} \\ &= 10^{-5.7} \\ &= 1.995 \times 10^{-6} \end{aligned}$$

#### (2) Convert from Watt to field strength

a. Convert from Watt to V/m @ 3m distance

$$\begin{aligned} V/m &= \frac{\sqrt{30 \times P_t \times g_t}}{3} \\ &= \frac{\sqrt{30 \times 0.000001995 \times 1}}{3} \\ &= \mathbf{0.00257} \end{aligned}$$

b. Convert field strength to power density (V/m to dB $\mu$ V/m)

$$\begin{aligned} \text{dB}\mu\text{V/m} &= 20 \log (V/m) + 120 \\ &= \mathbf{68.2} \end{aligned}$$

## A.2.2: Test Procedure

Ref. ANSI C63.10-2013 section 6.5 & 6.6, Cisp16-1-1

ANSI C63.10: 2013 section 4.1.4 / section 12.7.5 (Quasi-Peak), section 12.7.6 (peak), section 12.7.7.3 (average)

### Test parameters

- (i) Span = Entire frequency range or segment if necessary.
- (ii) Reference Level = 80 dBuV
- (iii) RBW = 100 kHz (less than or equal to 1 GHz); 1 MHz (above 1 GHz)
- (iv) VBW  $\geq 3 \times$  RBW
- (v) Detector = Peak & Quasi-Peak (frequency range 30 MHz to 1 GHz);  
Peak & Average (frequency range above 1 GHz); Change VBW to 10 Hz for average measurement
- (vi) Sweep Time = Couple

Using Vasona, configure the spectrum analyzer as shown below (be sure to enter all losses between the transmitter output and the spectrum analyzer). Place the radio in continuous transmit mode.

#### **30MHz – 18GHz,**

Save plots: Peak plot (Vertical and Horizontal) @3m

#### **Above 18 GHz,**

Save plots: Peak plot (Vertical and Horizontal) @1m

Place a marker at the end of the restricted band closest to the transmit frequency to show compliance. Also measure any emissions in the restricted bands.

**Note:** The data displayed on the plots detailed in the graphical test results section were measured using a 'Peak Detector'. Please refer to the results table for the detectors used during formal measurements.

Note: No measurable emissions found from 10GHz – 26.5GHz.

### A.3: Receiver Spurious Emissions

RSS-Gen

Receivers are required to comply with the limits of spurious emissions as set out in this section. Receiver emission measurements are to be performed as per the normative test method referenced in Section 3.

For emissions at frequencies below 1 GHz, measurements shall be performed using a CISPR quasi-peak detector and the related measurement bandwidth. At frequencies above 1 GHz, measurements shall be performed using a linear average detector with a minimum resolution bandwidth of 1 MHz

Ref. RSS-Gen sec 8.9 & 8.10

Ref. ANSI C63.10: 2013 Section 12.7.6 (Peak), Section 12.7.7.2 (Method AD), and Section 6.6

Radiated Spurious Emissions	
Test parameters	
<b>Peak</b> Span = 1-18GHz /18GHz-26.5GHz/26.5GHz-40GHz RBW = 1 MHz VBW ≥ 3 MHz Sweep = Auto couple Detector = Peak Trace = Max Hold.	<b>Average</b> Span = 1-18GHz /18GHz-26.5GHz/26.5GHz-40GHz RBW = 1 MHz VBW ≥ 3 MHz Sweep = Auto couple Detector = RMS Power Averaging

Maximize Turntable (find worst case table angle), Maximize Antenna (find worst case height)

- Save 2 plots:    1) Average Plot (Vertical and Horizontal), Limit= 54dBuV/m @3m  
                      2) Peak plot (Vertical and Horizontal), Limit = 74dBuV/m @3m

Radiated emission measurements shall be performed with the receiver antenna connected to the receiver antenna terminals. Terminate the access Point RF ports with 50-ohm loads.

This report represents the worst-case data for all supported operating modes and antennas.

**Note:** No measurable emissions found from 10GHz – 26.5GHz

## **A.4 AC Conducted Emissions**

**FCC 15.207 (a) & RSS-Gen 8.8** Except when the requirements applicable to a given device state otherwise, for any radio apparatus equipped to operate from the public utility AC power supply, either directly or indirectly (such as with a battery charger), the radio frequency voltage of emissions conducted back onto the AC power lines in the frequency range of 0.15 MHz to 30 MHz shall not exceed the limits shown in the table in these sections. The more stringent limit applies at the frequency range boundaries.

### Measurement Procedure

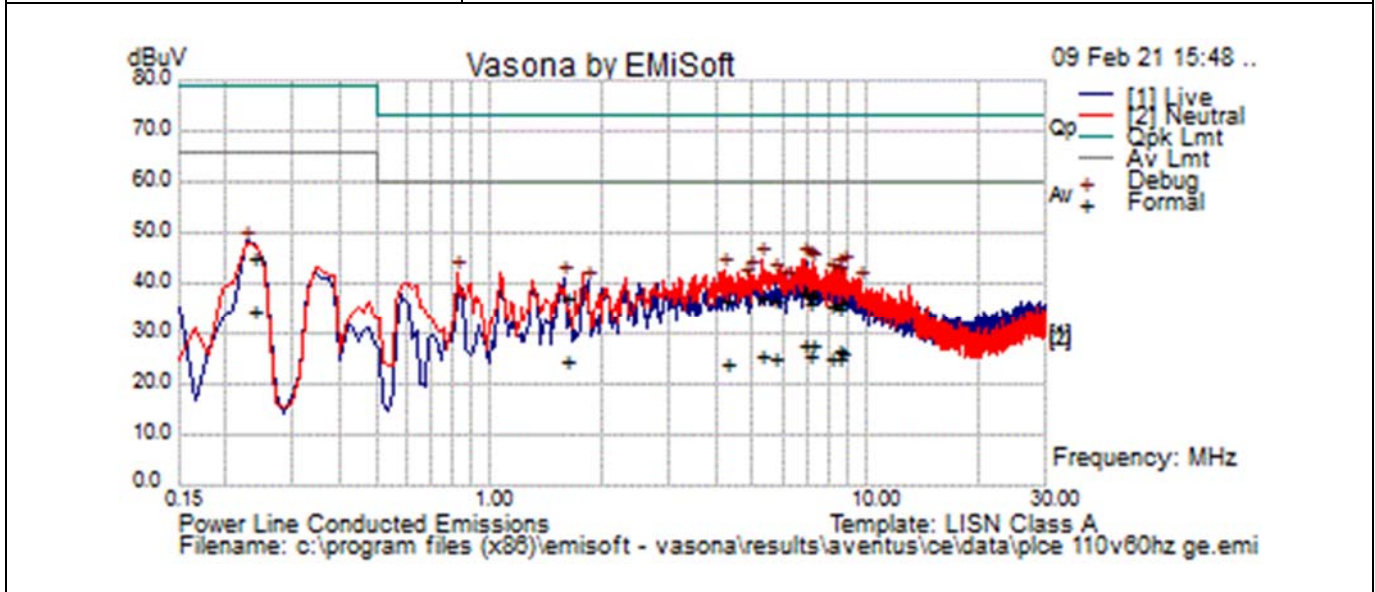

Accordance with ANSI C63.10:2013 section 6.2

Using Vasona, configure the spectrum analyzer as shown below (be sure to enter all losses between the transmitter output and the spectrum analyzer). Place the radio in continuous transmit mode.

Span: 150 KHz – 30 MHz  
Attenuation: 10 dB  
Sweep Time: Coupled  
Resolution Bandwidth: 9 KHz  
Video Bandwidth: 30 KHz  
Detector: Quasi-Peak / Average

## **Appendix C: Photographs of Test Setups**

See FCC/RSS RSE Test Setup document – EDCS-21686217

## Appendix D: Abbreviation Key and Definitions

The following table defines abbreviations used within this test report.

Abbreviation	Description	Abbreviation	Description
EMC	Electro Magnetic Compatibility	°F	Degrees Fahrenheit
EMI	Electro Magnetic Interference	°C	Degrees Celsius
EUT	Equipment Under Test	Temp	Temperature
ITE	Information Technology Equipment	S/N	Serial Number
TAP	Test Assessment Schedule	Qty	Quantity
ESD	Electro Static Discharge	emf	Electromotive force
EFT	Electric Fast Transient	RMS	Root mean square
EDCS	Engineering Document Control System	Qp	Quasi Peak
Config	Configuration	Av	Average
CIS#	Cisco Number (unique identification number for Cisco test equipment)	Pk	Peak
Cal	Calibration	kHz	Kilohertz (1x10 <sup>3</sup> )
EN	European Norm	MHz	MegaHertz (1x10 <sup>6</sup> )
IEC	International Electro technical Commission	GHz	Gigahertz (1x10 <sup>9</sup> )
CISPR	International Special Committee on Radio Interference	H	Horizontal
CDN	Coupling/Decoupling Network	V	Vertical
LISN	Line Impedance Stabilization Network	dB	decibel
PE	Protective Earth	V	Volt
GND	Ground	kV	Kilovolt (1x10 <sup>3</sup> )
L1	Line 1	μV	Microvolt (1x10 <sup>-6</sup> )
L2	Line2	A	Amp
L3	Line 3	μA	Micro Amp (1x10 <sup>-6</sup> )
DC	Direct Current	mS	Milli Second (1x10 <sup>-3</sup> )
RAW	Uncorrected measurement value, as indicated by the measuring device	μS	Micro Second (1x10 <sup>-6</sup> )
RF	Radio Frequency	μS	Micro Second (1x10 <sup>-6</sup> )
SLCE	Signal Line Conducted Emissions	m	Meter
Meas dist	Measurement distance	Spec dist	Specification distance
N/A or NA	Not Applicable	SL	Signal Line (or Telecom Line)
P	Power Line	L	Live Line
N	Neutral Line	R	Return
S	Supply	AC	Alternating Current

## **Appendix E: Software Used to Perform Testing**

EMlsoft Vasona, version 6.024

## Appendix F: Test Procedures

Measurements were made in accordance with

- KDB 558074 - D01 DTS Meas Guidance v05
- KDB 662911 - MIMO
- ANSI C63.4 2014 Unintentional Radiators
- ANSI C63.10 2013 Intentional Radiators

Test procedures are summarized below

FCC 2.4GHz Test Procedures	EDCS # 1445042
FCC 2.4GHz RSE Test Procedures	EDCS # 1480386

## **Appendix G: Scope of Accreditation (A2LA certificate number 1178-01)**

The scope of accreditation of Cisco Systems, Inc. can be found on the A2LA web page at:

<http://www.a2la.org/scopepdf/1178-01.pdf>

## **Appendix H: Test Assessment Plan**

Compliance Test Plan (Excel) EDCS#21669684  
Target Power Tables EDCS#19467753

## **Appendix I: Worst Case Justification**

All 3 orientations (Z, Y, Z) of the EUT were assessed by performing pre-scan.  
The X orientation was determined to be the worst-case orientation.
