Re: Attestation of Tune Up Procedure

To whom it may concern,

The Intellis™ Patient Therapy Manager (PTM) Model 97745 device does not have a procedure or a method to update the output power levels of the transmitter once in the field or even if the PTM has been shipped back to Medtronic.

If the unit has been damaged, the customer will return the damaged unit and will receive a new PTM from the factory that has passed all manufacturing tests.

Sincerely,

A handwritten signature in black ink, appearing to read "Anne Coldwell". The signature is written in a cursive, flowing style.

Anne Coldwell,
Director, Quality and Reliability
