16 August 2013

To whom it may concern:

The Medtronic Reveal LINQ™ LNQ11 Insertable Cardiac Monitor contains a radio transmitter that operates in the MedRadio band between 401.36 and 401.64 MHz. This transmitter has no provisions for a tune-up process. The transmitter power output is fixed and is verified during production test to confirm that it does not exceed the value shown on the FCC grant of certification. The frequency deviation of the transmitter is adjusted during production test and the occupied bandwidth is then verified to confirm that it does not exceed the occupied bandwidth requirements for the MedRadio wing bands. No radio parameters are configurable by the user.

Respectfully,

Matthew Kirkwood
Principal Systems Engineer
Medtronic, Inc.
