4.3 .TEST IN COMPLIANCE WITH

FCC PART 18, SUBPART C

4.4. FREQUENCY RANGE INVESTIGATED

- a. Conduction : from 10 KHz to 30 MHz
- b. Radiation : from 9 KHz to 30 MHz.

4.5. TEST DISTANCE

The test distance of radiated emission from antenna to EUT is 10M.

5. TEST OF CONDUCTED POWERLINE

Conducted Emissions were measured from 10 KHz to 30 MHz with a bandwidth of 10 KHz for 150KHz to 30MHz and 200Hz for 10KHz to 150KHz on the 120VAC power and return leads of the EUT according to the methods defined in FCC/OET MP-5(1986). The EUT was placed on a nonmetallic stand in a shielded room 0.4 meters above the ground plane as shown in Section 5.3. The interface cables and equipment positioning were varied within limits of reasonable applications to determine the position produced maximum conducted emissions.

5.1. MAJOR MEASURING INSTRUMENTS

• Test Receiver	(R&S ESH3)	
Attenuation	0 dB	0 dB
Start Frequency	150 KHz	10 KHz
Stop Frequency	30 MHz	150 KHz
Step MHz	0.007 MHz	0.007 MHz
IF Bandwidth	10KHz	200Hz

5.2. TEST PROCEDURES

- a. The EUT was connected to power mains (220VAC/60Hz) through a line impedance stabilization network (LISN). This provides 50 ohm coupling impedance for the measuring instrument. The FCC states that a 50 ohm, 5 microhenry LISN should be used, Both sides of AC line were checked for maximum conducted interference.

5.3. TYPICAL TEST SETUP LAYOUT OF CONDUCTED POWERLINE

5.4. TEST RESULT OF AC POWERLINE CONDUCTED EMISSION

- Frequency Range of Test : from 10 KHz to 30 MHz
- All emissions not reported here are more than 10 dB below the prescribed limit.
- Temperature : 20•
- Relative Humidity : 62 % RH
- Operation switch mode: [High \(2600W\)](#)
- Test Date : Jan. 04, 2000

The Conducted Emission test was passed at Neutral 0.0191 MHz / 73.80 dBuV.

6. TEST OF RADIATED EMISSION

Radiated emissions from 9KHz to 30MHz were measured with a bandwidth of 9 KHz for 150KHz to 30MHz and 200Hz for 9KHz to 150KHz according to the methods defines in FCC/OET MP-5 (1986). The EUT was placed on a nonmetallic stand in the open-field site, 0.8 meter above the ground plane, as shown in Section 6.3. The interface cables and equipment positions were varied within limits of reasonable applications to determine the positions producing maximum radiated emissions.

6.1. MAJOR MEASURING INSTRUMENTS

• Test Receiver	(R&S ESH3)	
Attenuation	0 dB	0 dB
Start Frequency	150 KHz	9 KHz
Stop Frequency	30 MHz	150 KHz
Step MHz	0.007 MHz	0.007 MHz
IF Bandwidth	9KHz	200Hz

Note: 1. For the EUT operating frequency below 1.705MHz, the frequency rang of measurement which is according to the Commission rule 18.309 is from 9KHz to 30MHz.

2. Distance refers to the distance in meters between the measuring antenna and the closet point of EUT.

6.2. TEST PROCEDURES

- a. The EUT was placed on a rotatable table top 0.8 meter above ground.
- b. The EUT was set 10 meters from the interference receiving antenna which was mounted on the top of a variable height antenna tower.
- c. The table was rotated 360 degrees to determine the position of the highest radiation.
- d. The antenna is a shielded balanced loop antenna is varied between one meter and two meters above ground to find the maximum value of the field strength both horizontal polarization and vertical polarization of the antenna are set to make the measurement.
- e. For each suspected emission the EUT was arranged to its worst case and then tune the turn table (from 0 degree to 360 degrees) to find the maximum reading.
- f. Set the test-receiver system (R/S ESH3) to Peak Detect Function and specified bandwidth with Maximum Hold Mode.
- g. If the emission level of the EUT in peak mode was 6 dB lower than the limit specified, then testing will be stopped and peak values of EUT will be reported otherwise the emissions which do not have 6 dB margin will be repeated one by one using the quasi-peak method and reported.
