

## Statement Letter

There is a HW version P1 for FE5RWR131 which already certificated in SGS lab.

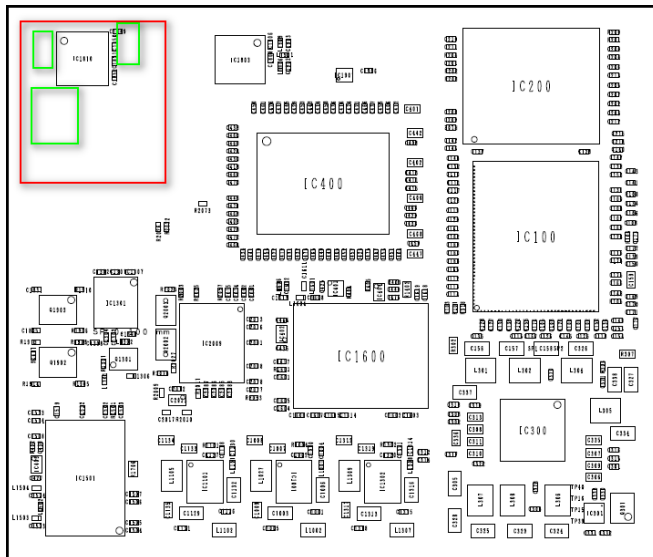

The HW version for new product is P2. We declare both FE5RWR131 P1 and P2 HWs support same bands, same category configuration, for FE5RWR131 P2, there is no components/BOM change, only minor PCB layout changes.

### 1. HW change:

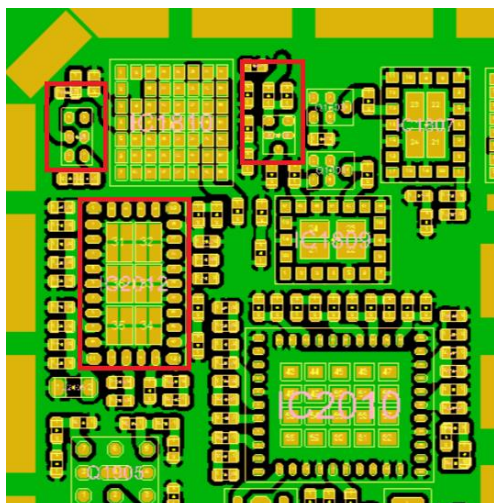

Due to the components package size (blow 3 green zone which used for other variant with the same PCB) changed, the trace in yellow zone should be tuned. But the frame would not be changed.

For the variant FE5RWR131 P1/P2, there 3 components not used, so the layout change around these components has no impact to the P2 design.

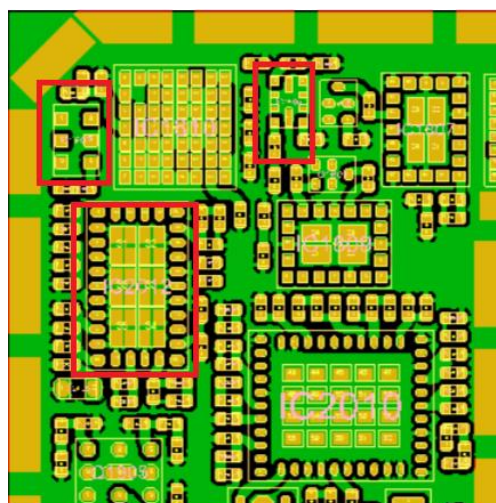

### 1). Layout change zone in green:

### 2). Detail changes:

FE5RWR131 P1

FE5RWR131 P2

The above changes will not affect the original RF performance of the product
