Overall Assessment Letter for GNAD1A
FCC id: LHJGNAD1A

I have reviewed this application and find it compliant.

This is an application for a modular transmitter which supports GSM 850 and PCS 1900. The module additionally supports GSM 900 and DCS 1800, however are not relevant as they are not supported in North America.

Please note the following:

1: Label

The label initially did not contain the proposed FCC ID and was therefore updated to include this information.

2: User Manual

The user manual was requested to be updated to include information regarding the labelling requirements to be applied when the module is integrated into the final device. Information regarding the 20cm required distance required for compliance with RF Exposure has been included into the user manual, as well as the maximum antenna gain allowable for the module.

The internal photos exhibit contains updated photos showing views with cans removed. The agent cover letter was requested to be updated to state the specific authorised individual and to be signed by the grantee contact person on file with the FCC. The confidentiality letter was requested to be signed by the authorised individual/grantee contact person. I underwent the FCC RF exposure training at BABT in July 2007.

Yours sincerely

Vina Kerai
