

## **TOAD RK30 - Remote Keyless Entry System**

### **User Instructions**

#### **Introduction**

The system comprises of an electronic module with integrated radio frequency receiver. It is used to operate the central door locking of your vehicle and will offer some additional convenience features. The coded signal transmitter when the remote control button is pressed changes in a random sequence making it impossible to grab the transmitted code and open the vehicle. The system is designed to be totally universal which can be installed in any vehicle without difficulty.

The system is supplied with two radio frequency transmitters each of which has two buttons. The functions of the buttons is shown below :-

#### **Operating**

##### **Locking**

After leaving your vehicle you can lock the doors by pressing the left hand button on your remote control transmitter. The vehicle will lock and this will be confirmed by one flash of the indicators.
