	24(E)	1850.2 - 1909.8	1.3	0.1 PM	256KGXW

Output is EIRP. SAR compliance for body-worn operating configurations is limited to the two specific leather carrying cases and one belt-clip tested for this filing. The leather carrying cases have been tested for SAR compliance only with the display and keypad of this device facing a user's body, therefore, by design, these carrying cases must only support normal transmission for body-worn use under this operating configuration. End-users must be informed of the body-worn operating requirements for satisfying RF exposure compliance.

The highest reported SAR values are - head: 1.09 W/kg; body-worn: 0.54 W/kg with the belt-clip.
