NOKIA

Kare Oksanen   27 September 2006

1. Please note that DA00705 requires that band edge compliance data be taken with hopping stopped and with hopping enabled. The report appears only to show hopping stopped. Please note that hopping enabled is not necessary for out of band radiated spurious emissions however. Please provide hopping enabled data for band edge compliance.

I have now uploaded new test reports showing hopping enabled data.

2. FYI – this is to confirm that Short Term Confidentiality is no longer being requested.

Yes, product design has been now published.

3. I did not see calibration data on the vocoder test equipment. Please provide or please point to the page where this information is located.

Corresponding calibration data is now uploaded.
